Il Sig. Timmins, in un rapporto sulla fabbrica di vagoni e carri a Birmingham, dice che la fabbrica di carrozze da strada ferrata, carri, ecc., cominciava in quella città nel 1838, e per la posizione centrale di essa è Birmingham divenuto il sito d'un negozio grandissimo. Si può formare qualch' idea dell' importanza di questa industria dal fatto che più di tredici mila miglia di strada ferrata sono in uso nel regno, impiegando circa 18,000 carrozze da passeggeri e 233,000 carri, ecc. Il Sig. Timmins stima il valore dei vagoni (comprese locomotive) di questo paese a circa 17,000,000£, e su questa somma c' è un' abbassamento annuale che monta a 1,250,000£. Il numero delle locomotive adoperate sulle strade ferrate del paese durante 1865 fu 7,414.

Però, oltre il provvedere i materiali per lavorare le strade ferrate nostrali, quantità grandi sono prodotte per esportazione. Nell' anno 1865 i seguenti articoli principali di fabbrica inglese in affinità con questa classe furono esportati dalla Gran Brettagna.

	Quantità	Valore
	No.	£
Carrozze di strada ferrata :		
Per passeggeri	1,261	177,000
Carri, carrette, ecc. . .	580	22,000
Ferro di strada ferrata :	Tons	
Raili, tie rods	330,588	2,627,000
Traverse di parmezzi . .	76,098	393,000
Ruote e asse	4,872	118,000
Altre specie	23,000	412,000
Meccanismo : macchine a vapore e porzioni delle medesime :		
Locomotive	—	945,000

Il progresso generale delle strade ferrate

nella Gran Bretagna negli ultimi undici anni è mostrato della statistica seguente :—

	In 1855	In 1865
Estensione di raill in uso	Mila 8,280	Mila 13,289
Fondo totale pagato, azioni, prestiti, ecc.	297,584,000	455,478,000
No. di passeggeri trasportati	118,595,000	251,960,000
No. di passeggeri per mila	14,323	18,960
Ricevute totali di mer- canzie	21,507,000	35,731,000
Spese totali di lavoro	10,299,000	17,149,000
Ricavo netto	11,208,000	18,582,000

Fra i miglioramenti più recenti si può citare l'usanza d' acciajo per railli, tire, ecc., e l'invenzione dell' apparato centrale di railli, per agire sui piani inclinati.

Miglioramenti considerabili sono stati fatti, anche in locomotive. Il Sig. Humber, nella sua opera sull' arte dell' ingegnere moderno, enumera i seguenti: 'L'addattamento delle locomotive per bruciare il carbone invece di coke, e per consumare il suo fumo. Il scaldare l'acqua provvedutovi col vapore sciupato. Equilibrio nel agire reciprocamente le parti rivolgenti della macchina, pel qual mezzo il logorare e lo sdruscire delle macchine e dei railli è ridotto di molto, ed il mantenimento di grande rapidità con sicurezza è fatto praticabile; ed il riscaldamento di molto il vapore prima d'entrare nei cilindri per via di mantenere il calore normale, e di ridurre la perdita di forza cagionata dal condensamento.'

Classe LXIV.

APPARATO TELEGRAFICO E PROCESSI RELATIVI.

Fu annunziato dal giuri di Classe 13 all' Esposizione di Londra nel 1862, che dopo l' Esposizione del 1851 non vi erano grandi scoperte nella scienza elettrica nè alcuna applicazione pratica ed importante dei principj di questa scienza. D' altra parte una grande estensione del sistema telegrafico è stato fatto, come anche l'introduzione di gomena submarine. Il fatto più importante dopo il 1862 è senza dubbio l'effettuazione fortunata del porre la gomina submarina fra il mondo vecchio e quello nuovo. Durante l'anno 1866 la terza intrapresa di stabilire una comunicazione telegrafica fra l'Irlanda e la Terra Nuova, una distanza di 1,670 miglia nautiche, fu coronata di successo; poiche non soltanto la nuova gomina submarina fu posta, ma ancora la gomina rotta nell' anno antecedente fu recuperata dalla profondità dell' oceano, e prolungata insino alle rive del Mondo Nuovo, così formando una doppia linea di comunicazione. La più bassa profondità dell' acqua fu trovata essere 2,400 *fathoms*, ossia meno di 2½ miglia nautiche. La prima gomina fu posta nel 1858, la quale fu finita e adoperata

per circa tre settimane quando cessò improvvisamente. La seconda gomina, posta in parte nel 1865, si ruppe in mezzo al mare. La gomina del 1858 era assai più sottile in fabbrica che le altre due gomena susseguenti, avendo solamente una sforza cedente di 3 tonnellate 5 quintali, ossia uguale a 4.85 volte il suo peso in acqua per miglio, mentre che il peso della gomina del 1865 era 7 tonnellate, 15 quintali, e quella del 1866 8 tonnellate 2 quintali, ossia uguale a undici volte il loro peso in acqua per miglio. La velocità della comunicazione nella gomina del 1866 è stimata dalla Compagnia Telegrafica Atlantica, con i strumenti migliorati ora in uso, essere non meno di otto parole per minuta.

Secondo un rapporto pubblicato dal Consiglio di Commercio, vi erano (ad eccezione dei telegrafi delle strade ferrate e telegrafi particolari) 16,953 miglia di telegrafi nella Gran Bretagna nell' anno 1865, i quali adoperavano 80,123 miglia di filo di ferro, circa 8,000 strumenti. L'aumentazione dei telegrafi particolari nella capitale e nelle altre grandi città è stata molto considerabile durante questi pochi ultimi anni. Grandi migliorazioni sono anche state fatte in ogni genere d' apparato telegrafico.

Classe LXV.

L'ARTE DELL' INGEGNERE CIVILE, LAVORI NAZIONALI ED ARCHITETTURA.

Il progresso che è stato fatto nelle tre ramificazioni dell' arte dell' ingegnere civile, lavori nazionali, ed architettura è tanto grande che non è facile di dare in poche righe un' idea proporzionata della sua importanza. L' estensione rapida di linee ferroviarie, oltre allo aver stabilite facili comunicazioni su tutti i punti del Regno, ha ancora aumentata la prosperità del commercio col movimento crescente di viaggiatori ed è stata una delle cause principali di progresso.

Molti importanti lavori d' ingegnere sparsi in tutte le parti del paese potrebbero essere notati. Nel territorio della metropoli solamente, cinque ponti nuovi da strada ferrata, e due ponti nuovi da pedoni sono stati costrutti per passare il Tamigi, ed un terzo ponte per pedoni stà ora per costruirsi a Blackfriars. Il ponte nuovo da pedoni a Westminster, e molti altri ponti, sono fatti di ferro, e sono notabili per il disegno ardito e per novità di costruzione. Una cosa notevole in qualche uni dei ponti nuovi di strada ferrata, è che sono retti intieramente su pilastri di ferro, i quali sono formati di cassoni di ferro vuoti affondati nel fiume senza aiuto di fabbricazione esteriore di alcuna specie. Questi cassoni sono empiti di rottami e calce, il tutto formando insieme colonne gigantesche che reggono il ponte. L' importanza di combinare l' adornamento con l' utilità non è stato dimenticato, ed in molti casi si vede nel ferramento degli edificj un buon gusto considerabile, che è un segno decisivo d' avanzamento

nella maniera di costruire i ponti di ferro. Tre altri lavori importanti, cioè la Strada Ferrata Sotterranea, l'Arginamento del Tamigi, ed il sistema dello scolamento generale, possono essere notati anche come segni di progresso. La Strada Ferrata Sotterranea è costruita in quasi tutte le sue parti sotto le strade principali della città, e quando sarà completa essa, formerà il circolo interno della comunicazione delle strade ferrate nella metropoli. La porzione che è già aperta al traffico fra le parti occidentali e orientali della città ha oltrapassato ogni speranza, in quanto all'utilità per il pubblico, e profitto per la compagnia. L'Arginamento del Tamigi, che è ora in un stato avanzato dalla parte nord del fiume, formerà una strada nobile da Westminster alla città, e quando il sistema dello scolatojo generale sarà tutto completo, essa renderà, si spera, all'acqua del Tamigi la sua limpidezza. L'estensione di bacini e porti avanza sempre, e somme grandi sono votate dal parlamento per la costruzione di porti di rifugio e moli; fra quelli che sono completi o in atto di costruzione si può notare i lavori a Portland, Dover e Holyhead. Il numero totale di fanali sulle rive della Gran Bretagna (eccettuato i lumi particolari dei porti) è 212, oltre 42 lumi di navi galleggianti.

In quanto all'architettura, un miglioramento grande è stato fatto in edificj nazionali d'ogni specie, e gli edificj nazionali di Londra si possono mettere in comparazione con quelli di qualunque altra parte del mondo. Le stazioni nuove delle strade ferrate nella metropoli dimostrano un talento d'ingegnere vistoso; mentre che le locande vaste che sono state fabbricate in connessione colle strade ferrate fanno grande onore agli architetti nostrali. Gli uffizj nuovi governativi a Whitehall, le chiese nuove, i banchi, gl'uffizj d'assicurazione, ed i casini (clubs), le case signorili, le sale da concerti, le case d'affitto pei braccianti, fabbricate negli dieci ultimi anni, possono anche essere citati come segni di progresso. Questi edificj che superano di molto gli antichi di medesima specie nella grandezza, sono anche notabili per dimostrare un più grande apprezzamento dei principj d'arte in quanto al disegno ed il metodo della decorazione.

L'introduzione di marmi di colore e di terra cotta per l'ornamentazione è stata coronata di successo in molti casi. L'esempio il più notevole del impiego di terra cotta sarà trovato nelle fabbriche che si costruiscono a South Kensington, le quali quando saranno complete formeranno uno degl'abbellimenti principali della metropoli. Intimamente associato coi lavori di questa classe si può notare il stabilimento recente dei consigli di lavori pubblici e di sanità, metropolitani e locali, il dovere dei quali è di vegliare alla condizione sanitaria e generale dei diversi territorj che hanno in cura, ai mezzi presi per diminuire il nocimento del fumo, ai miglioramenti nei giardini e parchi pubblici, ed anche a molt'altre cose meno grandi per il bene del pubblico.

La manifattura di serrature che sono esposte in questa classe è un negozio di grande importanza, ed è condotta principalmente a Wolverhampton ed in altre città di South Staffordshire.

Gli estratti seguenti, da un rapporto del Sig. J. C. Tiddesley all'Associazione Britannica in 1865, danno una vista molto completa delle ramificazioni principali della manifattura di serrature.

Località della Produzione, e Specie di errature fatte	Numero degli Impiegnanti	Numero approssimativo dei Braccianti	Guadagno ordinario ebdomadario
Wolverhampton: .			s. s.
Per gabinetti e cassettoni da denaro, prima qualità .	20	400	25 a 40
A leva, di dentro o di fuori dell'uscio, e d'imbrunitura superiore .	50	800	25 „ 40
Willenhall, compreso Short Heath, ecc.: .			
Di fuori o di dentro l'uscio, a doppio giro, lucchetti e per cassettoni .	275	3,000	11 „ 30
Walsall, compreso Bloxwich: .			
Lucchetti e da gabinetto, in ferro .	35	400	18 „ 30
Wednesfield: .			
Da gabinetto, e chiave .	50	200	15 „ 25
Brewood: .			
D'imbrunitura superiore .	30	150	18 „ 28
Totale .	460	4,950	

La produzione totale ebdomadaria di serrature nel distretto è stimata come segue:—lucchetti 24,000 dozzine; per gabinetti, casse e cassettoni 3,000 dozzine; esterne per uscio, interne, ed a doppio giro, 3,000 dozzine; d'imbrunitura superiore, 1,000 dozzine; buone serrature a leva ed altre specie, 500 dozzine; essendo una produzione aggregata di 31,500 dozzine di serrature per settimana.

Forse nessuna ramificazione d'industria locale di ha preso meno vantaggio del progresso recente scienza meccanica che il mestiere di serrature.

In quasi tutti i casi sono fabbricate precisamente nella medesima maniera che furono venti anni fa. Il fatto che il mestiere è fra le mani di capitalisti piccoli, si attribuisce la mancanza d'intrapresa e di quel progresso che ha caratterizzato le altre divisioni d'industria locale. Però, l'espansione recente del mestiere di serrature in Lancashire, Londra, ed altri territorj produrrà senza dubbio un cambiamento nel modo di fabbricare anche in questi luoghi. Lo stato degli artigiani impiegati in questa ramificazione d'industria è migliorato negli anni ultimi, ma c'è ancora duopo di miglioramento.

In quanto allo sviluppo d' arte nel mestiere di serraglieria, v' è ancor campo a miglioramento, sia nel disegno, sia nell' ornamento, senza scemar per nulla le qualità utili di questi articoli importanti. In connessione colla manifattura di serrature di qualità superiore, gli articoli fatti dai Sigr. Chubb e Hobbs sono tanto bene conosciuti che non richiedono veruna descrizione.

In quanto ai materiali per fabbricazione che sono prodotti nella Gran Brettagna, inoltre di pietre, lavagna, e calce, ecc., gran quantità di mattoni si fanno ogni anno in diverse parti del paese. Legname da costruzione è importato principalmente dall' America Settentrionale e dal Mare Baltico. Il commercio forestiere nelle specie principali di materiali da costruzione nell' anno 1865 fu come il seguente:—

Merci d' Importazione.

	Quantità	Valore
		£
Pezzi di marmo . . . tons	9,994	74,085
„ segati . . . cwts.	40,572	29,043

Classe LXVI.

NAVIGAZIONE E BATTELLI DI SALVAMENTO.

La rivoluzione portata nella costruzione di navi da guerra durante gli dieci o quindici anni passati è così ben conosciuta dal mondo, che sarebbe superfluo il darne qui dettagliata relazione; nondimeno, si può notificare che un gran negozio di fabbrica di lamine d' armatura per coprire le navi è cresciuta nel paese, in conseguenza del nuovo modo di costruire vascelli da guerra.

La tavola seguente farà vedere il numero delle navi ricoperte di lamine appartenendo alla Marina Reale, quelle a galla e quelle in costruzione, secondo il rapporto fatto al Parlamento nel 1866:—

	Numero	Tonnellate	Cannoni
A galla			
Navi ricoperte di lamine: Intieramente ricoperte	13	49,782	219
Ricoperte in parte	17	59,485	258
Batterie a galla: Intieramente ricoperte di lamine . . . }	4	7,367	62
Essendo costrutte			
Navi ricoperte di lamine: Intieramente ricoperte	2	9,732	12
Ricoperte in parte . . .	2	8,223	22

Una nave costrutta sul metodo 'cupola' del Capitano Coles è inclusa nella lista di vascelli a galla, e due sul medesimo metodo sono in istato d' essere costrutte, tutti e tre i vascelli essendo intieramente ricoperti di lamine.

Mettendo a parte, nondimeno, la considerazione di vascelli da guerra per i mezzi di difesa, e per la protezione del commercio, un paese che impiega annualmente un naviglio di quasi 50 milioni di tonnellate nel suo negozio forestiero e nostrale deve essere grandemente occupato nella costruzione di vascelli. I cantieri principali sono sulle rive dei fiumi Tamigi, Humber, Tyne, Wear, Tees, Severn, Mersey, e Clyde, e anche a Dundee, Belfast e molt' altri porti del regno.

Il tonnellaggio dei bastimenti mercantili appartenendo alla Gran Brettagna e le isole nei mari inglesi, era nel 31 dicembre 1865:—

	Tonnellaggio totale
Bastimenti a vele . . .	4,937,000
„ „ vapore . . .	824,000
Totale . . .	5,761,000

Qualch' idea dell' importanza della costruzione di vascelli dal punto di vista commerciale può essere inferita dalla quantità di navi nuove costrutte annualmente nel paese. La tavola seguente mostra la quantità di bastimenti costrutti e registrati durante gli ultimi tre anni:—

Anni	Vascelli a Vela		Vascelli a Vapore	
	Vascelli	Tonnellate	Vascelli	Tonnellate
1863 . . .	883	255,000	280	110,000
1864 . . .	873	272,000	376	161,000
1865 . . .	922	236,000	382	180,000

Del numero totale di vascelli costrutti nel 1865, 844 bastimenti di 153,000 tonnellate furono fatti di legno, e 460 bastimenti di 262,000 tonnellate, di ferro.

Il ferro usato nella costruzione di vascelli di ferro è una produzione del paese, ma la legna adoperata nel costruire i vascelli di legno è, per lo più, importata fuor del regno. Grande quantità di canapa e di fibra di noce di cocco per fornire fune e sartiame, sono anche importate, una notizia della quale si troverà nella Classe 55.

Non vi sono rapporti recenti del numero delle persone impiegate nella costruzione di vascelli, ecc., nella Gran Bretagna. Secondo il censo del 1861, la quantità totale della gente impiegata nella costruzione di bastimenti, barche, e barche a fondo piano, e nella fabbrica di alberi e vele, era :—

Divisioni	Uomini	Donne	Totale
In Inghilterra e Galles	43,704	75	43,779
Scozia . . .	9,148	6	9,154
Irlanda . . .	2,220	9	2,229
	55,072	90	55,162

La tavola seguente dei prezzi medj dei salari pagati ai braccianti nel negozio della costruzione di vascelli è composta dai rapporti forniti al Consiglio di Commercio, dalle rispettive Camere di Commercio nell' anno 1866 :—

Nella nostra relazione sul progresso che è stato fatto durante gli anni recenti nella costruzione di navi in questo paese, non sarebbe giusto di omettere che inoltre la costruzione della nuova flotta ricoperta di lamine, il Governo ha compito la conversione di quasi tutte le navi a vela appartenendo alla Marina Reale in vascelli di vite a vapore, così provvedendo il paese con una marina a vapore di gran forza.

Nella costruzione generale il principio della linea ondeggiante, 'wave line,' introdotto dal Signor Scott Russell, è stato grandemente adottato dai costruttori di vascelli, ed in conseguenza dell' uso generale di ferro i bastimenti sono ora fatti assai più lunghi e con linee più fine, in questo modo accrescendo molto la loro facilità di muovere a vela o a vapore, a lor potere il carico, si ottengono risultati commerciali più vasti. Fra le invenzioni e le migliorazioni le più recenti, si può citare navi a doppia vite, la 'cigar' nave, l' uso d' acciaio invece di ferro per la copertura esteriore di vascelli, ed il nuovo metodo di propulsione idraulico.

La nave reale 'Waterwitch,' la quale è provvoluta con questo nuovo sistema di propulsione, ha fatto ultimamente alcune prove sperimentali fortunate; il meccanismo consiste in una gran ruota attortigliata spiralmemente, chiamata il 'Ruthven propeller,' la quale attira l' acqua dentro il fondo del bastimento, e la getta fuori da un' apertura praticata ai due lati del vascello, vicino alla linea a fior d' acqua.

Riguardando l' uso dei segnali nella marina, una commissione internazionale fu tenuta recentemente a Parigi per favore del Sig. Marchese di Chasseloup-Laubat, il Ministro della Marina Francese, e sotto la presidenza del Sig. Ammiraglio la Roncière le Noury. Il Sig. W. F. Larkins, del Consiglio di Commercio, e il Sig. Sallandrouze de Lamornaix, della Marina Imperiale Francese, furono autorizzati dalla Commissione di esaminare e correggere il libro dei segnali. Il 'Codice Internazionale di Segnali Commerciali' è stato quindi adottato nelle navi di guerra, e nei bastimenti mercantili di tutti i paesi, per la comunicazione reciproca, sia sul mare, sia colle stazioni e semafori a terra.

Il codice è differente dagli altri codici adottati fin' ora, avendo le bandiere del codice marcate colle iniziali B. C. D., invece di essere numerate 1, 2, 3, ecc.

Il vantaggio di averle così marcate è, che 18 segnali distinti sono ottenuti, i quali (presi 2 insieme, 3 insieme, e 4 insieme) danno 78,642 combinazioni separate per fare segnali, ciascun

essendo perfetto da sè, che e non vi sono più di quattro bandiere in alcun segnale nell' altezza.

In tutto il codice, il principio è sempre mantenuto, che la forma dell' altezza indicherà la qualità del segnale; che l' altezza sia di 2, 3, o 4 bandiere. Per esempio, un segnale fatto con due bandiere del codice reclama la maggior attenzione, essendo tutti i segnali di 2 bandiere più importanti.

Come pure in altezza di 4 bandiere, se la bandiera B. (triangolare) sia la più alta, il segnale sarà sempre geografico.

Se alcune delle 13 bandiere quadrate del codice sono le più alte in una altezza di 4 bandiere, il segnale sarà sempre uno che indica il nome d' un bastimento.

Una lista dei bastimenti è pubblicata nel codice come annesso al libro segnali, dando il nome d' ogni bastimento, la sua portata, e forza motrice (se è a vapore). Il codice è bastantemente esteso per ammettere l' appropriazione di più di 40,000 segnali distinti per i nomi di bastimenti esclusivamente.

I governi della Francia e della Gran Bretagna hanno (come fu fatto qualche anno fa in proposito ai fanali di vascelli a vapore) indirizzata una lettera ai governi dei principali stati marittimi raccomandando l' adozione del codice commerciale, con l' intenzione di stabilire un sistema uniforme internazionale di segnali sul mare.

Il governo francese fu il primo ad adottare questo codice, a *preferenza di ogn' altro*, nelle navi francesi, ed a tutte le stazioni di semafori, ed i governi della Spagna, il Portogallo, e l' Italia hanno già notificato la loro intenzione di seguire l' esempio della Francia.

C'è ancora un' altra novità nel codice commerciale la quale deve essere osservata. Essa provvede per fare segnali a distanza, per mezzo d' un codice che deve essere adoperato quando non è possibile di vedere i colori delle bandiere. Questo è effettuato coll' uso di 1 o 2 palle nere, le quali sono inalberate, congiunte ad ognuna delle due bandiere del codice, e cotesti segnali possono essere scambiati con i semafori già posti sulle rive della Francia, come è spiegato nel codice nel libro segnali a distanza.

Il codice commerciale è stampato e pubblicato dal Sig. W. Mitchell, 54 Gracechurch-street, e dai Signori Galignani a Parigi.

Una classe importantissima d' oggetti posti in questa divisione dell' Esposizione è quella delle barche da salvare i naufraghi ed apparato per salvare la vita sul mare.

In un paese che possiede un sì grande commercio forestiero e costeggiante, oltre le pesche estensive in ogni parte delle coste, il provvedimento di mezzi ampj per dare soccorso ai

vascelli in pericolo è oggetto di somma importanza. Un rapido sguardo dato alla carta annuale dei naufraghi della Gran Bretagna basterà per far vedere la quantità di lavoro che resta da fare per le barche di salvamento. La quantità totale di bastimenti perduti o danneggiati nel 1865 era 2,012, ed il numero totale delle anime perdute 698. Di questo numero 275 perirono in vascelli che andarono a fondo; 53 a bordo dei vascelli che vennero in collisione, 335 in vascelli gettati a secco, e 35 da altre cause differenti. Quando si ricorda che questa perdita di anime avvenne in un tempo che il nostro sistema di barche da naufraghi era nel suo più alto stato d' efficienza, è chiaro che ci resta da fare ancora molto per provvedere al soccorso dei nostri simili onde preservarli da una morte prematura e tanto crudele.

La manutenzione delle barche di salvamento è sotto l' autorizzazione dell' Istituzione Reale Internazionale di Barche di Salvamento, lo quale è sostenuta da contribuzioni volontarie. Durante i dieci anni passati, grandi miglioramenti sono stati fatti nella costruzione delle barche, e la Società ha posto molte barche addizionali sulle parti pericolose delle coste, le quali insino ad ora erano intieramente private dei mezzi di dar aiuto ai vascelli in pericolo. Il numero totale delle barche appartenenti all' Istituzione (nov. 1866) sulle diverse coste della Gran Bretagna montava a 172, delle quali 125 erano in Inghilterra e la provincia di Galles, 19 nella Scozia e 28 nell' Irlanda. Vi erano ancora circa 20 altre barche in differenti località del regno mantenute da fondi locali. In addizione alle barche di salvamento, il Consiglio di Commercio mantiene 249 stazioni con apparato di razzi per salvare i vascelli; esse sono lavorate dai guardacoste. Saggi d' una barca di salvamento migliorata, ed ancora del apparato di razzi ed altri mezzi per salvare la vita sul mare, si troveranno esposte in questa classe.

Il numero delle anime salvate ne 1865 era, da barche appartenendo all' Istituzione, 532; da barche ordinarie, 182; e dall' apparato di razzi, 180.

Il costo per stabilire una stazione di barche di salvamento è di 620£. Cioè:—

	£
Barca di salvamento, apparecchio comprendendo cinti di sughero per l' equipaggio e carrozza di trasporto per la barca . . .	420
Tettoja per la barca (prezzo medio)	200
Totale . . .	620

Il prezzo medio annuale per mantenere una stazione di barca di salvamento è 50£.

GRUPPO VII.

(CLASSI LXVII.-LXXIII.)

CIBO (FRESCO O PRESERVATA) NEI VARJ STATI DI
PRESERVAZIONE.

Classe LXVII.

GRANI CEREALI ED ALTRI PRODOTTI FARNACEI E COMMESTIBILI E PRODOTTI RICAVATI DA ESSI.

GLI oggetti esposti in questa classe posseggono un grande interesse, essendo intimamente in rapporto con la capacità del paese di fornire uno degli articoli principali del cibo necessario alla sua popolazione, e benchè la produzione di grani cereali nella Gran Bretagna non basti a provvedere alle necessità della popolazione, un' area grande del paese è destinata alla loro coltivazione. Insino all' anno 1866, non vi erano rapporti esatti dell' area di tutto il regno che fu sotto coltivazione. La tavola seguente esporrà il totale raccolto di ciascuna specie di grano, in quell' anno, nelle diverse divisioni del regno:—

	Jugeri in Coltivazione		
	In Inghilterra	In Galles	In Scozia
Gran gentile	3,161,431	113,862	110,101
Orzo .	1,877,387	146,323	213,619
Avena .	1,503,990	251,893	1,004,040
Segala .	50,570	2,452	7,055

Non vi sono rapporti della quantità delle specie differenti di grano prodotte nel paese, ma in quanto al gran gentile, è stimata montare a circa 27 staj per jugero, in Inghilterra, in Galles, e in Scozia, a 25 staja per jugero in Irlanda. Questo darebbe una produzione possibile di circa 12,364,000 quarti per la Gran Bretagna, meno l' Isola di Man e le isole della Manica.

La tavola seguente mostra la proporzione delle raccolte di grano sull' area totale del paese che coltiva raccolti o pascolo.

Divisione	Area totale dove cresce ogni specie di raccolta, nudo, maggese ed erba	Per cento di Area totale dove cresce raccolta di grano
Jugeri		
Inghilterra . .	22,262,000	33.3
Galles . . .	2,284,000	22.8
Scozia . . .	4,158,000	32.9
Isola di Man .	83,000	32.9
Isole della Manica :		
Jersey . . .	20,000	15.4
Guernsey . .	12,000	17.0
Irlanda . . .	*15,549,000	14.0

I distretti principali dove cresce il grano in Inghilterra sono posti nelle parti est e sud-est del paese; le provincie centrali e del ouest producono anche il grano, ma una grande estensione di terreno è per pascolo. In Scozia la medesima divisione esiste, il grano crescendo principalmente nelle provincie d' est, e l' erba nel sud e nel sud-ouest. In Irlanda i distretti produttori di grano sono situati al nord ed al sud dell' isola.

Gli estratti seguenti, tolti dall' opera del Signor Caird sull' agricoltura inglese, forniscono perfetti ragguagli sui cambiamenti che sono stati fatti nella coltivazione dei poderi durante il presente secolo. Comparando le statistiche riunite del 1850 e 1851 con l' informazione dataci dal Signor A. Young, in 26 contee in Inghilterra nel 1770, fu osservato il seguente progresso:—

		1770	1850
Affitto di terreno coltivato . . .	per jugero	s. d. 13 4	s. d. 26 10
	Staj	23.0	26.4
Produzione di grano . . .			
Salari dei braccianti, prezzo medio . . .	per settimana	s. d. 7 3	s. d. 9 7
	Affitto di capanne . . .	8.	1 5
Prezzo del pane . . .	per libbra	1 1/2	1 1/4
	„ della carne . . .	3 1/2	5
„ del burro . . .	„	6	1 0

* Questa misura di jugeri include le pasture delle montagne le quali non sono incluse negli altri rapporti, e in conseguenza fa vedere il per cento del grano meno che sia in verità, se fosse stimato sulla medesima base come nelle altre divisioni del regno.

Chiara apparisce che in una durata di 80 anni il prezzo medio dell' affitto di terra arabile ha aumentato 100 per cento, il prodotto medio del grano ha aumentato 14 per cento, il salario del bracciante 34 per cento, l' affitto della sua capanna 100 per cento, mentre che il prezzo del pane, il cibo importante e principale del bracciante inglese, è quasi simile a quel che fu nel 1770. Il prezzo del burro ha aumentato del 100 per cento, la carne circa 70 per cento, e la lana più di 100 per cento. Dopo l' anno 1850, il valore del burro, della carne, e della lana è anche aumentato considerabilmente in prezzo.

L' aumento del 14 per cento nella produzione media del grano non indica l' aumento totale del prodotto. L' estensione del terreno in coltivazione era, senza dubbio, assai meno che al presente; e la produzione stimata allora fu il medio di una qualità migliore di terreno, la più buona essendo certamente la prima coltivata. La prosperità della produzione misurabile del grano dev' essere il risultato dell' ammiglorata coltivazione, malgrado l' influenza contraria presentata dall' impiego di terreno inferiore. L' esteso aumento di terreno ora messo a grano, colla sua produzione massima, non ha, però, alcuna proporzione coll' aumento degli affitti; e il prezzo del grano è quasi simile adesso a quel che fu a quel tempo. Bisogna in conseguenza riguardare i rapporti sul bestiame per spiegare questa discrepanza.

‘Mentre che il prezzo del grano non ha cresciuto, la carne, il burro, e la lana hanno quasi raddoppiato di valore. La quantità prodotta è anche grandemente cresciuta, lo stesso terreno ora pasturando vacche più grandi, bestie che arrivano più presto a maturità ed a maggior dimensione, e pecore di miglior peso e qualità, che forniscono più lana. Nelle cascinie e nei poderi adattati per la produzione di bestiame, e specialmente di pecore, il valore della produzione annuale è andato del pari coll' aumentazione dell' affitto. Per i coltivatori del grano, il caso è assai differente. Nei tempi passati i terreni gravi argillosi erano riguardati come i migliori suoli del paese per grano. Per questi, pagavano l' affitto il più caro, la decima la più pesante, ed impiegavano il più gran numero di contadini. Ma i miglioramenti moderni hanno intieramente rovesciato la loro posizione. L' estensione delle raccolte erbacce, e la pastura del bestiame, hanno così ammiglorato la qualità produttiva dei terreni leggieri, che eglino producono grano a meno costo che i terreni argillosi, inoltre al vantaggio importante, che il bestiame mantenuto su questi terreni rende anche un gran profitto.’

L' area totale sulla quale crescevano raccolte erbacce nella Gran Brettagna nel 1866 (i primi rapporti perfetti che sono stati riuniti) era 5,055,220 jugeri, dei quali 2,750,000 jugeri erano in Inghilterra; 139,265 nella provincia di Galles; 663,257 in Scozia; 1,482,091 in

Irlanda; 12,208 nell' Isola di Man; 5,253 in Jersey; e 2,938 in Guernsey.

Il prezzo medio di grano inglese, orzo ed avena, per quarto imperiale, durante gli anni cinque, 1861 insino al 1865, era :—

	Gran gentile	Orzo	Avena
	s. d.	s. d.	s. d.
1861	55 4	36 1	23 9
1862	55 5	35 1	22 7
1863	44 9	33 11	21 2
1864	40 2	29 11	20 1
1865	41 10	29 9	21 10

È già stato detto che la produzione nostrale del grano nella Gran Brettagna è insufficiente ai bisogni della popolazione, e grandissime quantità sono in conseguenza importate. Durante gli anni dodici dal 1854 insino a 1865, il medio valore annuale del grano importato nel regno, montava a non meno di 24,000,000 di lire sterline. Le quantità delle specie principali di grano importate nell' 1865 e le fonti della provvisione, sono indicate nella tavola seguente :—

Paesi dai quali importate	Quantità rapportate per Consumazione
Gran gentile:	Quintali
Russia . . .	8,160,000
Danimarca . . .	647,000
Prussia . . .	5,426,000
Francia . . .	2,266,000
Nord America Britannica	307,000
Stati Uniti d' America	1,183,000
Altri paesi . . .	2,946,000
Totale . . .	20,935,000
Farina:	
Francia . . .	3,058,000
Nord America Britannica	181,000
Stati Uniti d' America	262,000
Altri paesi . . .	382,000
Totale . . .	3,833,000
Orzo:	
Danimarca . . .	1,550,000
Prussia . . .	770,000
Città Anseatiche	400,000
Francia . . .	1,583,000
Turchia . . .	2,087,000
Altri paesi . . .	1,428,000
Totale . . .	7,818,000
Avena:	
Russia . . .	1,963,300
Svezia . . .	3,090,000
Danimarca . . .	1,071,000
Prussia . . .	65,000
Olanda . . .	726,000
Altri paesi . . .	796,000
Totale . . .	7,711,000

Paesi dai quali importate	Quantità rapportate per Consumazione Quintali
Gran turco:	
Russia	1,194,000
Valacchia e Moldavia	545,000
Turchia	3,178,000
Stati Uniti dell' America	1,771,000
Altri paesi	399,000
Totale	7,087,000

I paesi notati nella soprascritta tavola, ad eccezione dell' Egitto, il quale per molti anni fornì gran quantità di frumento, orzo, e gran turco, sono stati le fonti principali per la provvisione durante gli ultimi quindici anni. In conseguenza della recente guerra civile negli Stati Uniti, la quantità del grano ricevuto da quel paese nel 1865 era considerabilmente meno delle importazioni ordinarie. Il grano è soggetto a un dazio d' importazione di 3d. per quintale, e la farina a 4½d. per quintale.

Grandissime quantità di riso, sagou, tapioca, semolino, maccheroni, e vermicelli, i quali non sono prodotti nel paese, sono anche importate. Nell' anno 1865 le importazioni seguenti furono fatte:—

Articoli	Quantità	Valore
Riso nel guscio	6,478	£ 15,310
„ sgusciato	1,938,816	1,330,941
Sagou	148,582	121,285
Tapioca	22,363	37,025
Semolino	2,453	2,773
Maccherino e vermicelli „	7,486	18,012
Totale	1,525,346	

La quantità totale della gente impiegata nell' agricoltura, cioè nella coltivazione di poderi e prati, in ogni divisione della Gran Bretagna nell' anno 1861 era:—

Divisione	Uomini	Donne	Totale
In Inghilterra e Galles	1,457,075	376,577	1,833,652
Scozia	215,716	120,773	336,489
Irlanda	850,121	81,714	931,835
Totale	2,522,912	579,064	3,101,796

Lo stato del contadino in ogni parte del regno è stato per lungo tempo il soggetto di considerazione. Riguardato come un impiego, la coltivazione del terreno fornisce meno remunerazione al bracciante che qualunqu' altra occupazione. I ragioni dei salarj variano considerabilmente in ogni parte del paese, ma anche in quei distretti dove si paga i migliori salarj la condizione del contadino non è punto soddisfacente.

Secondo i rapporti fatti al Parlamento nell' anno 1861, i prezzi seguenti furono pagati ai contadini nelle tre divisioni del paese:—

Rate altissime e bassissime del Prezzo medio dei Salarj, per Settimana, senza Affitto o Cibo.

Divisione e Distretti	Uomini		Donne		Bambini avendo meno di 16 Anni	
Inghilterra:	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Sud-est	10 0	a 13 6	3 6	a 6 0	2 6	a 6 0
Sud Centrale	10 0	„ 13 0	3 6	„ 5 0	2 0	„ 8 0
Est	10 0	„ 13 0	3 6	„ 5 0	1 6	„ 8 0

Nord	12 0	„ 16 6	4 2	„ 8 0	3 0	„ 7 6
Vicinanza di Galles }	10 0	„ 13 0	2 6	„ 6 0	1 6	„ 9 0
Galles	8 0	„ 15 0	3 0	„ 6 0	3 0	„ 9 0
Scozia (circa)	10 0	„ 16 0	4 0	„ 8 0	2 0	„ 7 0
Irlanda (circa)	5 7	„ 10 2	2 9	„ 5 0	1 7	„ 4 0

I salarj ebdomadarj di lavoro assegnato scorrono da 2s. a 5s. in più delle soprascritte rate.

Molto progresso è stato fatto nella scienza d' agricoltura nella Gran Bretagna durante gli ultimi anni, e più specialmente in Inghilterra e Scozia. I metodi perfezionati di coltivare i poderi, che sono stati introdotti, nei quali è incluso un miglior sistema di successione di raccolte, un' ampia estensione di scolamento e dell' uso di concimi artificiali, siccome l' impiego di macchine per molti lavori di coltivazione hanno condotto l' industria agricola del paese in una assai migliore posizione di quella che occupava prima. L' aumento della produzione del bestiame sui poderi è stata accompagnata da risultati molto soddisfacenti, e gli esperimenti recenti della coltivazione dei terreni argillosi per mezzo della macchina a vapore sono stimati essere assai fortunati. Una relazione di macchine d' agricoltura, le quali sono ora largamente impiegate per tutto il paese, si troverà nella Classe 48. Le esposizioni annuali della Società Reale d' Agricoltura, e le diverse esposizioni internazionali ed altre, porsero il mezzo d' aumentare l' uso del meccanismo il più perfetto; mentre che i studj di molti chimici eminenti, e di uomini scientifici, hanno portato sì benefici miglioramenti alla natura del terreno, da contribuire grandemente al buono stato dell' industria agricola della Gran Bretagna.

Classe LXVIII.

PANE E PASTICCERIA.

Nello spazio di pochi anni, la fabbricazione di pane a macchina ha aumentato con rapidità. Fra le macchine per fare il pane esposte all' Esposizione di Londra nel 1862, quelle da impastare il pane furono meglio rappresentate. Queste macchine furono esposte come effettuant un risparmio di tre per cento nella farina solamente. Un forno di campagna per cuocere i biscotti fu lodato dal giurì sulla Classe 7, o

espressero la speranza che per riguardo alla salute, alla pulitezza, ed anche per il ben essere degl' artigiani impiegati nel mestiere, l' uso generale di meccanismo per fare il pane sarebbe adottato dai fabbricanti.

La consumazione annuale di grano, e farina di grano, per cibo nella Gran Brettagna è stimata circa 20 milioni di *quarters*, o $5\frac{1}{2}$ bushels per capo.

Il numero di fornaj e confettieri in ogni divisione della Gran Brettagna nel 1861 fu:—

	Fornaj	Confettieri
In Inghilterra e Galles .	54,140	14,526
Scozia	10,894	1,924
Irlanda	9,293	1,547
Totale	74,327	17,997

Non vi sono rapporti ufficiali del prezzo del pane. Il prezzo medio di grano per *quarter* in Inghilterra e Galles durante i cinque anni 1861-65 fu:—

	s.	d.
1861	55	4
1862	55	5
1863	44	9
1864	40	2
1865	41	10

Classe LXIX.

SOSTANZE UNTUOSE USATE PER CIBO; LATTE E OVA.

Gli olii buoni da mangiare non sono prodotti nella Gran Brettagna, e in quanto agl' altri oggetti compresi in questa classe, la produzione nostrale non basta alla richiesta della popolazione. Quantità grandi di burro, formaggio, e uova sono importate ogn' anno nel paese. Le statistiche relative al commercio forestiere negl' oggetti compresi in questa classe sono le sottoscritte:—

Quantità e Valore d' Oggetti importati per Consumazione.

Anni	Quantità			
	Olio d'Oлива	Burro	Formaggio	Ova
	Tons	Cwts.	Cwts.	Gt. Hundreds
1861	15,981	987,000	698,000	1,694,000
1862	20,077	1,024,000	695,000	1,936,000
1863	18,940	957,000	747,000	2,224,000
1864	15,726	1,038,000	826,000	2,794,000
1865	30,716	1,068,000	842,000	3,033,000
	Valore			
	£	£	£	£
1861	908,600	4,874,000	1,618,000	550,000
1862	1,152,800	4,860,000	1,530,000	594,000
1863	1,085,800	4,402,000	1,863,000	673,000
1864	902,200	5,569,000	2,151,000	835,000
1865	1,616,900	5,871,000	2,432,000	928,000

L' olio d' oliva è importato principalmente dall' Italia e dalla Spagna; il burro dall' Olanda,

Belgio, Francia, Amburgo, e gli Stati Uniti, e le uova da Francia.

Il valore di burro e formaggio di fabbrica inglese esportato durante i cinqu' anni 1861-65 fu:—

Anni	Burro	Formaggio
	£	£
1861	466,000	130,000
1862	374,000	127,000
1863	472,000	157,000
1864	327,000	147,000
1865	333,000	111,000

Classe LXX.

CARNI E PESCI.

Benchè la consumazione di carne nella Gran Brettagna sia molto grande, non c' è mezzo di sapere il montante del consumo annuale. A causa del prezzo alto della carne negl' anni recenti, diversi progetti per l' introduzione di carne conservata dall' America Meridionale sono stati provati, ma sin' ora sono rimasti senza risultati importanti.

Il mare che circonda le coste delle Isole Britanniche fornisce una provvista abbondante di pesce. Le specie principali sono baccalà, rombi, soglie, sgombrì, merluzzi, aringhe, saracche, gambaretti, ostriche, e gamberi. Secondo il rapporto della commissione ultimamente nominata per informarsi della condizione della pesca inglese, fu detto che la provvista di pesce sulle spiagge della Gran Brettagna aumenta ogn' anno. La decrescenza nella provvista d' ostriche durante gl' ultimi tre anni è attribuita ad una successione di stagioni cattive che ne impedivano la generazione, però questa causa non è formalmente accertata.

Le pescagioni di salmoni d' Irlanda e di Scozia sono anche d' un' importanza considerabile; ma non vi sono rapporti della loro produzione annuale; quantità grande di salmoni sono esportate.

Le ramificazioni principali del negozio della pesca inglese sono quelle d' aringhe e saracche; grande quantità di queste due ultime specie di pesce essendo esportate ogn' anno, oltre la straordinaria quantità che si consuma nel paese.

Dopo l' estensione di comunicazioni per strade ferrate, la consumazione di pesce ha aumentato di molto, e la maggior parte delle città grandi del regno ora sono ogni giorno provvedute di pesce fresco. Non vi sono statistiche delle pescagioni inglesi, benchè la pesca d' aringhe a Yarmouth, come anche la pesca di saracche sulle spiagge di Devon e Cornwall, danno impiego a un gran numero di barche e pescatori. Oltre queste due ramificazioni di pesca, le barche da pescare sono impegnati in altre stagioni nel pigliare i merluzzi, i sgombrì, le soglie, i baccalà, ecc. ecc. Si stima che vi siano circa 800 e 900 barche da pesca impe-

gnate per provvedere del pesce al mercato di Londra; e asommando la quantità di pesce per ogni barca di 90 *tons*, questo farebbe un totale di circa 80,000 *tons* di pesce; senza calcolare le quantità d'aringhe, d'alici, pesce di scorza, ed altre specie di pesce che sono procurate con altri modi di pescare.

Il quadro seguente rappresenta il numero e la tonnellata di barche, e degl' uomini, e ragazzi impiegati nei pescagioni di Scozia, dell' Isola di Man, e d' Irlanda nell' anno 1864:—

	Pescagioni		
	Scozia	Isola di Man	Irlanda
No. di barche . . .	12,703	628	9,300
Tonnellate . . .	92,887	5,635	—
No. d' uomini e ragazzi . . .	40,934	2,550	40,946

Il prodotto delle pescagioni nel medesimo anno fu:—

	Scozia	Isola di Man
Baccalà e ling (altre specie):		
Preso o comprato . . .	161,000	19,600
Salato . . .	107,600	138
Aringhe:		
Preso . . .	691,000	44,060
Salate . . .	609,000	34,000

Non vi sono rapporti del prodotto delle pescagioni irlandesi, ma negl' anni recenti hanno diminuito. Si dice che la maggior parte delle barche da pesca in quel paese appartengono ai coltivatori che dimorano sulla spiaggia, e che son impegate solamente di tempo in tempo; il pesce preso non è mandato al mercato, ma è venduto nei dintorni della pesca.

Non vi sono rapporti dei prezzi medj della carne nelle parti diverse del paese. I prezzi medj della carne al mercato di bestie nella metropoli negl' anni 1863-65 furono:—

Per Stone di 8 Libbre (escludendo i Ritagli).

	1863	1864	1865
Bestie:	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
Inferiori . . .	3 7 $\frac{3}{4}$	3 9	3 10
2da classe . . .	4 2	4 4 $\frac{3}{4}$	4 4 $\frac{3}{4}$
3za classe (eccellenti grandi) . . .	4 8	4 9 $\frac{1}{2}$	4 9 $\frac{3}{4}$
4ta classe . . .	4 11 $\frac{3}{4}$	5 1	5 2
Pecore:			
Inferiori . . .	4 0	4 2 $\frac{1}{2}$	4 8
2da classe . . .	4 7 $\frac{1}{2}$	4 9 $\frac{3}{4}$	5 4
3za classe (lana lunga e comune) . . .	5 1	5 3	5 11
4ta classe (South Downs) . . .	5 5 $\frac{1}{2}$	5 8	6 4 $\frac{1}{2}$

Benchè i prezzi sopraseritti non danno alcun' indicazione del prezzo al minuto della carne, che è pagato dai consumatori generalmente, nondimeno rappresentano con qualch' esattezza il prezzo all' ingrosso di quest' articolo importante di cibo. In quanto al prezzo del pesce, i com-

missarij delle pesche ottenevano due rapporti mostrando le variazioni del prezzo in un porto di mare ed in un borgo dell' interno fra gl' anni 1856 e 1865 che furono come segue:—

A Newcastle-upon-Tyne		1856		1865	
		<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
Rombo . . . per stone	2	0	2 6	4	6 6 6

Hatibut . . . „	4	„	6	—	„ 6

Non vi sono rapporti ufficiali dei prezzi del pesce venduto nel mercato di Londra.

La quantità e valore del pesce forestiere importato nel Regno Britannico nell' anno 1865 fu:—

	Quantità	Valore
	Cwts.	£
Pesce fresco . . .	118,502	130,570
„ fumato o salato . . .	336,958	384,142
	485,560	514,712

Il pesce fresco è importato principalmente dall' Olanda e Norvegia, e pesce salato dall' America Meridionale Inglese, dalla Francia, dall' Olanda, dalla Norvegia, e dall' Islanda.

Gli esporti di pesce inglese nell' istesso anno furono:—

	Quantità	Valore
		£
Aringhe . . . barili	352,250	500,233
Baccalà . . . cwts.	36,433	40,361
Salmone . . . „	4,311	23,388
Saracca . . . hhds.	11,783	38,342
Ostriche . . . bushls.	97,039	63,130
Altre sorte . . . „	—	23,784

Le aringhe sono mandate principalmente alla Germania, all' Italia, e all' Austria; il salmone e l' ostriche alla Francia e al Belgio; e le saracche all' Italia e all' Austria.

Classe LXXI.

LEGUMI E FRUTTI.

La coltivazione di legumi e frutta è stata portata a gran perfezione nel Regno Britannico; e tutte due si consumano in gran quantità da

ogni classe. Non vi sono statistiche della produzione annuale dei giardini. L'area coltivata a patate (eccettuati i giardini) nella Gran Bretagna nell'anno 1866 fu 1,556,000 di acres.

Oltre alla provvista nostrale, importazioni considerabili di frutti e legumi sono fatte annualmente. Nell'anno 1865 gl'importi principali consistevano di —

Mele . . .	bushels	516,000
Uva . . .	„	58,000
Aranci e limoni . . .	„	1,567,000
Pere crude . . .	„	41,000
Altri frutti . . .	„	226,000
Cipolle . . .	„	529,000
Patate . . .	cwts.	807,000

Classe LXXII.

CONDIMENTI E STIMOLANTI; ZUCCHERO E CONFETTURE.

Gli oggetti principali inclusi in questa classe che sono prodotti nel Regno Britannico, sono sale da tavola, aceto, mostarda, salse, frutti conservati e confetture. La fabbrica di sale da tavola è collocata principalmente nelle contee di Cheshire e Worcester, dove si prepara in quantità grandi, benchè una porzione del sale di prima qualità è fabbricata in Londra dalle qualità più ordinarie prodotte nei luoghi nominati. La mostarda e le salse inglesi oltre di fornire alla richiesta nostrale, hanno una riputazione alta in quasi tutte le città forestiere e si consumano anche copiosamente nelle colonie. La consumazione dei generi compresi in questa classe che non sono prodotti in questo paese è molto grande. La tavola seguente mostra le quantità principali d'origine forestiera, calcolate sul consumo dell'anno 1865:—

Pepe . . .	libbre	4,713,000
Cacao . . .	„	3,826,000
Caffè . . .	„	30,511,000
Tè . . .	„	97,834,000
Zucchero crudo . . .	cwts.	9,876,000
„ raffinato . . .	„	724,000

Il pepe è ottenuto principalmente dalle isole olandesi nell' Indie orientali, vià Singapore; il cacao dall' Indie orientali inglesi e dall' America Centrale; il caffè da Ceilan, dall' India e dal Brasile; il zucchero crudo dall' Indie orientali inglesi, da Cuba, e dal Brasile, ed il zucchero raffinato d' Olanda, dalla Francia e dal Belgio. La cannella, i garofani, e le spezie, ecc., sono anche importate, ma non sono consumati in gran quantità.

Il consumo di tè e di zucchero crudo ha aumentato di molto durante gli ultimi dieci anni. Nel 1866 solamente 63,000,000 libbre di tè e 6,813,000 cwts. di zucchero grezzo furono importati per consumo. Confrontando le quantità importate in 1865, si osserva un' aumento di 55 per cento nel tè e 44 sullo zucchero grezzo.

La riduzione recente del diritto sul tè a 6d. la libbra ha contribuito di molto ad aumentare il consumo di quest' oggetto, ed è trovato esser un gran beneficio alle classi più povere della società.

La quantità media del consumo di tè in 1865 fu circa 3½ libbre per ogni persona della popolazione, e di zucchero 39 libbre.

Il consumo del cacao resta quasi sempre allo stesso punto, mentre che quello del caffè ha abbassato un poco.

Il valore del sale, frutti sott' aceto e salse, aceto, e confetture esportati dalla Gran Bretagna nell' anno 1865 montò a:—

	Quantità	Valore
Sale di rocca e bianco . tons	379,050	£ 274,631
Frutti sott' aceto e salse . . . } valore	—	328,381
Aceto . . . gals.	345,123	33,149
Confetture . . libbre	2,041,348	85,465

Classe LXXIII.

BEVANDE FERMENTATE.

Non vi sono registri della produzione di vini inglesi, che soni fatti per il più da frutte forestiere, cioè, aranci, uva passa, zenzero, ecc., ed anche di frutti d' origine nostrale, cioè ribes, uva spina e lamponi. Il sidro è prodotto in gran quantità in Devonshire, Herefordshire, ed altre contee nel sud-ouest dell' Inghilterra, dove in gran parte vien sostituito alla birra come bevaggio per le classi lavoranti. Le qualità superiori di sidro e di perry (bevanda fatta di sugo di pere) sono usati raramente dalle classi superiori. La birra è la bevanda ordinaria della maggior parte della popolazione, ed è prodotta in gran quantità non solamente pel consumo nostrale, ma anche per esportazione. La fabbrica di spiriti è anche molto estensiva. Il 'whiskey' irlandese e Scozzese sono i più rinomati dei spiriti nostrali, benchè si consuma forse meno che il 'gin,' l' acquavite, ed il rum, l' ultimo dei quali spiriti non è fatto in questo paese. La quantità d' orzo macinato usato dai distillatori di spiriti nel Regno Britannico durante i tre anni 1863-65 montò a:—

	Bushels
1863 . . .	4,133,000
1864 . . .	4,986,000
1865 . . .	4,408,000

Il numero delle persone autorizzate a far la birra in ogni divisione del Regno Britannico nell' anno 1865 fu:—

In Inghilterra e la Galles . . .	34,218
Scozia . . .	220
Irlanda . . .	90

Totale . . . 34,528

Il numero di distillatori di spiriti nel medesimo anno fu:—

In Inghilterra e Galles	8
Scotia	116
Irlanda	25
Totale	149

Il numero di distillatori abbassa ogni anno, a motivo del concentramento del negozio nelle mani di distillatori grandi, che usano ogni miglioramento moderno, e che hanno così il potere di emulare con successo i piccoli produttori.

La tavola seguente mostra la quantità di birra e di spiriti inglesi, e anche di vini e spiriti forestieri ritenuti pel consumo nel Regno Britannico nell' anno 1865:—

	Gallons
Birra (stimata)	684,000,000
Spiriti inglesi	21,005,000
Vini forestieri	11,994,000
Spiriti forestieri	6,732,000

In quanto al consumo dei beverage sopra-
scritti durante i dieci anni ultimi, c'è stato un'
aumentazione di birra, un abbassamento in
spiriti inglesi, un' aumentazione in spiriti fo-
restieri, ed una grand' aumentazione nel vino.
Il consumo aumentato di vino può essere in
gran parte attribuito alla riduzione del dazio
d' entrata su quell' articolo che fu fatto colla
negoziiazione del trattato commerciale colla
Francia nel 1860.

Le importazioni di vino per consumo dai

paesi principali di produzione in 1859 e 1865
fu:—

Paesi da dove fu importato		1859	1865
		Gallons	Gallons
Francia .	{ rosso . . .	423,000	1,782,000
	{ bianco . . .	272,000	829,000
Portogallo	{ rosso . . .	1,971,000	2,851,000
	{ bianco . . .	49,000	38,000
Spagna .	{ rosso . . .	47,000	506,000
	{ bianco . . .	2,829,000	4,685,000

Le specie principali di spiriti importati sono
il rum e l' acquavite. I luoghi principali
di provvista sono mostrati nella -tavola se-
guente:—

Importati per Consumo in 1865.

	Gallons
Rhum . { Dall' Indie occidentali . . .	1,499,000
{ inglesi	1,870,000
{ Dalla Guiana inglesi . . .	2,581,000
Acquavite . { " Francia	85,000
{ Altre parte	

La quantità di birra e birra bianca esportata
dal Regno Britannico durante i cinque anni
1861-65 sono date qui sotto:—

	Birra e Birra bianca	Spiriti
	Barili	Gallons
1861	378,000	4,085,000
1862	465,000	3,752,000
1863	491,000	4,076,000
1864	499,000	4,194,000
1865	562,000	1,987,000

Il valore totale del sopradetto consumo nell'
anno 1865, montò a 2,305,000 di lire sterline.

GRUPPO VIII.

(CLASSI LXXIV.-LXXXII.)

BESTIAME E SAGGI DI FABBRICHE PER AGRICOLTURA.

Classe LXXIV.

MASSERIE E LAVORI D' AGRICOLTURA.

La posizione dell' agricoltura in qualunque paese che ha una popolazione tanto grande, resterà sempre un soggetto di somma importanza. Negl' ultimi anni più attenzione è stata data alla coltivazione del terreno, che in passato, e per cura della fatica di molti uomini scientifici la cultura dei poderi è ora esercitata su vasta scala ed a norma dei precetti scientifici. L' introduzione della forza motrice a vapore per eseguire molte operazioni d' aratura, ecc., sul terreno ha apportati miglioramenti considerabili nel metodo di coltivazione in tutto il paese, e questi sono stati aiutati dalle specialità superiori d' arnesi e di macchine agricole fabbricate in Inghilterra. Si nota anche gran avanzamento nelle masserie che sono edificate recentemente, come anche negl' arnesi e nell' apparato che si usa nelle medesime.

La manifattura di meccanismo e degl' arnesi forma un' industria locale assai importante, benchè non vi siano rapporti del numero attuale di persone impiegate in quest' opera. Il meccanismo si fa a Lincoln, Bedford, ed in diverse parti di Suffolk, a Peterborough, Banbury, e Manchester. I fabbricanti inglesi di questa classe di macchine, oltre avere un commercio nostrale imponente, hanno anche un traffico d' esportazione di entità delle loro produzioni; ed è inconstabile che questa classe ha riportato sommo onore esponendo le sue macchine alle esposizioni internazionali.

Il valore degl' arnesi e del meccanismo inglese esportato dal Regno Britannico nell' anno 1865 montò a:—

	£
Arnesi d' agricoltura non enumerati	210,300
Arnesi d' agricoltura fatti interamente di ferro	13,177
Meccanismo d' agricoltura, eccettuato macchine a vapore	282,019

Macchine a vapore per servire all' agricoltura non sono specificate separatamente nei conti del commercio, ma questa ramificazione di mestiere è d' un valore considerabile.

Un rapporto sull' area in coltivazione coi raccolti principali nel Regno Britannico nell' anno 1866 si vedrà nella Classe 67, ed il numero di bestiame nelle Classi 75 a 77.

Classe LXXV.

CAVALLI, ASINI E MULI.

Non vi sono rapporti sul numero dei cavalli nel Regno Britannico, eccettuato quelli dei cavalli e muli soggetti alla tassa, o liberi da questa. Qui segue il numero di quelli soggetti o liberi di tassa in ogni divisione della Gran Bretagna nell' anno 1864:—

	Cavalli e Muli No.
In Inghilterra e Galles, tacciati	537,639
„ „ „ immuni	330,584
In Scozia, tacciati	55,428
„ „ „ immuni	147,444
Totale per la Gran Bretagna	1,071,095
Secondo il rapporto sull' Irlanda nel 1866	535,000
Totale per il Regno Britannico	1,606,095

Non vi sono rapporti del numero di asini nel regno.

La tavola seguente dà il numero ed il valore dei cavalli importati nella Gran Bretagna ed esportati durante i cinqu' anni 1861-65:—

Anni	Importati		Esportati (Britanniche)	
	Numero	Valore	Numero	Valore
		£		£
1861	1,595	37,693	2,954	237,813
1862	1,978	40,581	4,288	267,956
1863	1,441	39,264	5,204	269,525
1864	1,357	34,319	4,664	230,931
1865	1,332	39,658	4,400	185,367

Solamente 4 asini, del valore di 20£, furono importati nell' anno 1865; e 130 asini e muli del valore di 1,291£. furono esportati nel medesimo anno.

Classe LXXVI.**TORI, BUFALI, ECC.**

Il seguente è il rapporto del bestiame in ogni divisione del Regno Britannico, come fu accertato nell'anno 1866:—

Divisione	Vacche	Altro Bestiame	Totale
Inghilterra . . .	1,290,529	2,016,505	3,397,034
Galles . . .	222,546	318,855	541,401
Scozia . . .	370,447	566,954	937,401
Irlanda . . .	1,481,446	2,261,486	3,742,932
Isola di Man . . .	7,755	10,932	18,687
Isole della Manica:			
Jersey . . .	5,815	6,222	12,037
Guernsey . . .	3,030	3,946	6,976
Totale . . .	3,381,568	5,184,900	8,566,468

Oltre il numero del bestiame allevato nel regno per uso di cibo, un gran numero è importato ogn'anno da paesi forestieri, e principalmente dagli stati settentrionali dell'Europa. Un' aumento considerabile delle importazioni sarà osservato nel 1864 e 1865, che fu cagionato in gran parte dalla peste che colpì il bestiame inglese. Il numero ed il valore di bestiame d'ogni specie importato nella Gran Bretagna durante i cinqu'anni 1861-65 sono notati qui sotto:—

	No.	Valore £
1861 . . .	107,096	1,558,065
1862 . . .	97,887	1,301,602
1863 . . .	150,898	1,931,814
1864 . . .	231,733	3,208,851
1865 . . .	283,271	4,401,482

Gli esporti di bestiame sono assai insignificanti.

Il numero totale di bestiame stimato d'essere stato assalito dalla peste nella Gran Bretagna dal principio dell'epidemia in poi al 10 di novembre 1866, montò a 253,730. Su questa cifra, 85,018 furono ammazzati, 124,305 morirono, 33,413 guarirono, e di 10,994 non si hanno ragguagli; 52,415 bestie in buona salute furono ammazzate per impedire l'estensione della peste. Il per cento della stimata quantità solita del bestiame colpito dalla peste al 10 di novembre 1866 fu 5.141.

Classe LXXVII.**PECORE E CAPRE.**

Il numero totale delle pecore in ogni divisione della Gran Bretagna nell'anno 1866 fu:—

	No.
In Inghilterra . . .	15,124,000
Galles . . .	1,668,000
Scozia . . .	5,255,000
Irlanda . . .	4,270,000
Isola di Man . . .	55,954

Isole della Manica:

Jersey . . .	517
Guernsey . . .	1,214

Totale . . . 26,374,685

In conseguenza, però, della stagione dell'anno nel quale il rapporto sull'Inghilterra fu redatto, probabilmente ci manca una quantità grande d'agnelli. Non vi sono rapporti del numero delle capre nella Gran Bretagna, esse però non sono tenute in gran quantità.

Una importazione considerabile di pecore e d'agnelli è fatta annualmente nel regno quasi esclusivamente dall'Europa, e principalmente da Amburgo, Olanda, e Belgio. L'importazione durante i cinqu'anni 1861-65 è la seguente:—

	No.	Valore £
1861 . . .	312,923	616,020
1862 . . .	299,472	569,315
1863 . . .	430,788	669,573
1864 . . .	496,243	873,905
1865 . . .	914,170	1,787,866

Il sensibile aumento verificatosi nel 1865 è attribuito alla mancanza di carne sul mercato nostrale cagionata dalla peste del bestiame.

Il numero di pecore esportate è molto piccolo; nell'anno 1865 solamente 2,477 pecore, del valore di 22,134£, furono esportate dal regno.

Classe LXXVIII.**PORCI E CONIGLI.**

Il rapporto del numero dei porci nella Gran Bretagna non è completo, poichè i porci sono tenuti dai contadini, e quelli tenuti nelle città non sono inclusi nel rapporto. Questi esclusi, il numero totale nella Gran Bretagna nel 1866 è detto d'essere 3,800,000. I conigli abbondano in molte parti del paese, ma nessun rapporto esiste del numero supposto.

Le importazioni di porci durante i cinqu'anni 1861-65 furono:—

	No.	Valore £
1861 . . .	30,308	37,884
1862 . . .	18,162	17,319
1863 . . .	27,137	53,685
1864 . . .	85,362	192,566
1865 . . .	132,943	359,065

Un numero grandissimo di conigli sono importati da altri paesi, ma i rapporti della dogana non danno questo numero separatamente. Pochissimi sono i porci esportati; nel 1865 salirono a 148, del valore di 559£.

Classe LXXIX.**POLLAME.**

Non esistono statistiche sul numero del pollame del paese, ma dev'essere sufficiente di

provvedere per i bisogni della popolazione, perchè le importazioni sono comparativamente di poco valore. Le ova non sono incluse in questa classe, ma saranno trovate nella Classe 69.

Il valore del pollame, compreso la caccia ed i conigli importati nella Gran Bretagna durante i cinqu' anni 1861-65 fu:—

	£
1861	74,000
1862	86,000
1863	109,000
1864	131,000
1865	148,000

Classe LXXX.

CANI DA CACCIA E CANI DA GUARDIA.

Non abbiamo statistiche sul numero dei cani esistenti nella Gran Bretagna; perchè, quantunque essi siano soggetti ad una tassa, i mezzi evasivi sono tanti e tali da rendere impossibile un rapporto ufficiale esatto e preciso, dimostrante la quantità di questi animali tenuti nel paese.

Classe LXXXI.

INSETTI UTILI.

I soli insetti allevati nel Regno Britannico che fanno parte di questa classe sono le api, e

son mantenute in molti posti del regno. Varj miglioramenti nella fattura delle arnie sono stati introdotti nei dieci ultimi anni, ma ordinariamente l' antica arnia di paglia è la forma comune di arnia adoperata presso noi per la conservazione dell api. La quantità di miele e di cera importata nel Regno Britannico nell' anno 1865 fu:—

	Cwts.
Miele	4,519
Cera	10,678

Non esistono rapporti della somma totale della produzione nostrale di questi generi.

Classe LXXXII.

PESCE, CROSTACEI, E MOLLUSCA.

L' apparato il più importante compreso nei limiti di questa classe è quello per allevare il pesce per mezzi artificiali, il quale è stato adoperato con buona riuscita in diverse parti del regno. L' apparato però è adesso così ben conosciuto che ogni allusione su questo proposito sarebbe inutile. Una relazione sulla produzione delle pescherie britanniche si trova sotto la Classe 70

GRUPPO IX.

(CLASSI LXXXIII.-LXXXVIII.)

ALBERI, PIANTE, LEGUMI, E SAGGI DI FABBRICHE PER
ORTICOLTURA.

Classe LXXXIII.

STUFE PER LE PIANTE ED APPARECCHI
D'ORTICOLTURA.

Molti miglioramenti sono stati fatti durante i pochi anni passati nella costruzione di stufe e di serre, specialmente nel disegno di queste ultime. Riguardo ai vari apparecchi, l'invenzione e l'introduzione della macchina per falciare l'erba dei prati è una delle più importanti; esse taglia l'erba ad ogni tempo della giornata o dell'anno, mentre che la falce semplice non può essere usata che quando la rugiada è sull'erba. Molti altri miglioramenti negli strumenti ed apparecchi per giardinieri sono stati fatti durante i dieci anni passati, a causa dell'attenzione, sempre crescente, che fu data alla coltivazione e l'abbellimento dei giardini, come alle serre ed altri edifici per la coltura artificiale delle piante, i quali sono ora aggiunti per il più alle case moderne di una certa grandezza.

Classe LXXXIV.

FIORI E PIANTE DI ORNAMENTO.

Aggiunto al gusto naturale della gente per la coltivazione dei fiori, le società numerose d'orticoltura e di botanica, col mezzo dello stabilimento di giardini e dalle frequenti esposizioni pubbliche di fiori e piante, hanno concorso potentemente a promuovere questa particolarità nazionale. I giardini di fiori che appartengono all'alto e mezzo ceto sono generalmente riconosciuti di non essere superati da alcun'altra nazione nel mondo, e dal rapporto intimo che ha l'Inghilterra con ogni parte del mondo, i suoi giardini sono stati arricchiti dalle contribuzioni di ogni clima. Fra le introduzioni le più recenti, molti bei fiori e piante del Giappone, rare insino ad ora, possono essere notate. L'arte di ornare i giardini è stata negli anni recenti sviluppata immensamente in Inghilterra e ciò lo si deve, in gran misura, alla ricchezza aumentata del mezzo ceto.

Classe LXXXV.

LEGUMI.

Legumi di ogni specie sono coltivati estesivamente nella Gran Bretagna, ma, all'eccezione delle patate non vi sono rapporti dell'estensione della loro coltivazione.

L'area del terreno piantato con patate (meno i giardini) nell'anno 1866 era:—

	Jugeri
In Inghilterra e Gales	356,000
Scozia	143,000
Irlanda	1,051,000
Isola di Man	4,000
Isole della Manica	2,000
	<hr/> 1,556,000

Patate e cipolle sono anche importate in grande quantità, principalmente dalla Francia e dall'Olanda, dal Belgio e dal Portogallo. Nell'anno 1865, 807,000 cwts. di patate, del valore di 162,000*l.*, e 529,000 staj di cipolle, del valore di 121,000*l.*, furono importate nella Gran Bretagna.

Classe LXXXVI.

ALBERI POMIFERI.

Alberi pomiferi di diverse specie, specialmente alberi di mele, pere, e ciliege, sono coltivati estesivamente in molte parti del regno. In Devonshire, Somerset, e Herefordshire, molte mele sono coltivate per la fabbrica di sidro. Le ciliege della provincia di Kent sono assai celebri per le loro buone qualità. Molte altre frutta sono coltivate in giardini particolari, e in giardini chiamati 'giardini da mercato'; la produzione annuale è molto grande, benché non vi sono mezzi di stimare il suo valore. Grande attenzione è data alla propagazione di alberi pomiferi, e ogni anno si vede l'introduzione di molte specie di frutta assai migliorate.

Oltre la provvisione nostrale, gran quantità di frutta ordinarie sono annualmente esportate nel paese, fra le principali delle quali erano nel 1865:—

	Staj
Mele (crude) . . .	516,000
Pere . . .	41,000
Noci . . .	143,000
Noccioli . . .	251,000
Castagne . . .	72,000
Uva . . .	58,000

Quest' ultime non sono coltivate come una raccolta all' aperto, ma sono grandemente prodotte in serre.

Uva passa secca, mandorle dolci, datteri e fichi, non sono prodotti nel paese, ma sono importati. Nel 1865 la quantità di cotesti frutti montò a:—

	Cwts.
Uva passa . . .	368,000
Mandorle dolci . . .	32,000
Fichi sechi . . .	78,000
Datteri . . .	16,000

Classe LXXXVII.

SEMI E PIANTONI DI ALBERI DA SELVA.

Benchè la coltivazione delle selve nella Gran Bretagna è comparativamente limitata in estensione, essendo ristretta ai dominii regi e ad alcuni proprietari di ampj beni, la coltivazione degli alberi per boschi e piantagioni è molto curata. I parchi che circondano le dimore campestri dei proprietarj del fondo sono guar-
niti da alberi di tutte le specie, ma cotesti sono

coltivati principalmente per puro abbellimento. Vi sono pochi paesi, forse, nei quali un aggruppamento così vario di fogliame può essere visto, come nelle selve e piantagioni di molte contee dell' Inghilterra.

Classe LXXXVIII.

PIANTE DI SERRE.

È impossibile nello spazio concesso a queste osservazioni d' indicare i metodi differenti di coltivare le piante di serre nella Gran Bretagna, ma speriamo che alcuni dei modi più recenti saranno presentati all'Esposizione. Come calorifero, il cammino di mattone è sempre in uso esteso, ma l'acqua calda e l'apparato di gas sono anche molti adoperati. Grandi miglioramenti nella costruzione di serre e stufe sono stati fatti durante gli ultimi anni, i più importanti dei quali furono inventati dal fu Sir J. Paxton, e la riduzione nel prezzo del vetro ha anche dato ai disegnatori di costruzioni ornamentali un' estensione assai più vasta nella struttura di questi edifizj. La coltivazione delle piante di serre è grandemente aiutata dalle esposizioni che sono tenute dalla Società d'Orticoltura, ed altre società nella Gran Bretagna, dalle quali premj sono aggiudicati per i migliori saggi di fiori già conosciuti, come per l'introduzione fortunata di qualunque novità di piante cresciute al calore artificiale.

GRUPPO X.

(CLASSI LXXXIX.-XCIII.)

ARTICOLI ESPOSTI SPECIALMENTE PER MIGLIORAR LO STATO FISICO E MORALE DEI POPOLI.

Classe LXXXIX.

APPARATI E METODI PER SERVIRE ALL' ISTRUZIONE DEI FANCIULLI.

BENCHÈ non concorrano espositori all' attuale Esposizione, vi sono numerose società nella Gran Bretagna mantenute da sottoscrizioni private, lo scopo delle quali è di facilitare alle scuole elementari, oltrechè al pubblico in generale, i mezzi d' ottenere stimole opere educative a prezzo ristrettissimo. In quanto alla costruzione delle scuole, il Dipartimento di Scienza ed Arti mantiene un' esposizione perfetta dei più stimati modelli per costruire scuole pubbliche, ed anche la mobiglia ed apparati per esse. Grand' attenzione è stata fatta in Inghilterra alla educazione dei ciechi, dove non solamente sono ammaestrati nella lettura, ma anche sono istruiti in musica e varj lavori. Vi sono molte istituzioni in Londra ed altre città per il ricevimento di questa classe della popolazione, che sono capaci di mantenere delle centinaia di persone. È stabilito che nell' istituzione ben conosciuta di Southwark per i ciechi poveri, da dodici a quindici giovani lasciano la scuola ogn' anno bene istruiti in cose religiose e secolari, ed anche capaci di mantenersi come calzolari, tessitori, e fabbricanti di spazzole, pannieri, e stoje, ed alcuni che possono suonare l'organo ed altri strumenti.

Il numero totale di persone cieche nella Gran Bretagna, secondo il censo del 1861, era:—

	Persone	
In Inghilterra e Galles . . .	19,352	ossia 1 in ogni 1,037 persone
Scozia . . .	2,820	„ „ 1,086 „
Irlanda . . .	6,879	„ „ 843 „
Nelle isole (in mari inglesi) . . .	197	„ „ 728 „
	29,248	— 994

L' esposizione di libri scolastici e di carte geografiche, ecc., basterà da sè per mostrare quanto sia grande l'interesse spiegato nel miglioramento della condizione morale e sociale del popolo.

Classe XC.

BIBLIOTECHE ED APPARATI ADOPERATI PER LA ISTRUZIONE DI ADULTI—ALLE CASE LORO, NEI LAVORATORJ, IN SCUOLE E COLLEGI.

Lo stabilimento delle biblioteche e stanze di lettura per l'uso delle classi operaje ha esistito per molti anni in congiungimento colle istituzioni meccaniche e letterarie che si trovano in quasi ogni borgo e villaggio del regno. Lo stabilimento delle biblioteche pubbliche nei borghi grandi per l' uso di tutte le classi, è d' una data più recente. L' istruzione agli adulti appartenenti alle classi più povere è data nei collegj destinati ai lavoratori, alle classi di sera alle istituzioni meccaniche ed altri. Gli sforzi dei promotori di quelle istituzioni sono stati appoggiati abilmente da un gran numero di editori nostrali che hanno avuto a cuore la vera prosperità del operajo. La pubblicazione di libri scolastici, e di quelli adoperati per istruirsi da sè è ora così estesa, che la difficoltà non è di ottenere, ma piuttosto di scegliere dall' immensa varietà offerta. La circolazione grande dei fogli periodici a buon mercato, delle riproduzioni di opere classiche, e specialmente dei giornali a poco prezzo, debbono essere considerati come una prova del tipo migliorato d' educazione fra le classi tutte della società.

Classe XCI.

MOBILIA, VESTIARIO, E CIBO NOTEVOLI PER LE LORO QUALITÀ UTILI E PER IL BUON MERCATO.

In un paese come la Gran Bretagna, dove la porzione principale delle manifatture è destinata all' uso del basso ceto, non è facile di specificare quali oggetti cadono nel limite di questa classe. A causa della loro grande consumazione e dell' impiego di meccanismo nella manifattura, la maggior parte degli oggetti

mobiglia, vestiario e cibo son venduti a prezzo bastantemente basso per esser alla portata delli classi laboriose. Il prezzo degli oggetti principali usati dalle classi povere della popolazione è anche tenuto basso, dalla vasta concorrenza che esiste per provvederli, perchè per il genere del commercio (che si conduce per il più a danari contanti) si ricava gran guadagno, benchè gli oggetti si vendano a profitto piccolissimo.

Lo stabilimento e l' aumento rapido delle società co-operanti e provvidenti, che forniscono ai loro membri, principalmente delle classi operaje, diversi oggetti di vestiario e cibo al primo costo, offrono incontestabilmente un vantaggio sulle compre fatte alla bottega dell' associazione, e meritano quindi particolare menzione.

Classe XCII.

SAGGI DI VESTIARIO PORTATO DAI POPOLI DELLE DIVERSE PROVINCIE BRITANNICHE.

Alcune osservazioni in quanto alle distinzioni di vestiario portato dalle differenti classi nel Regno della Gran Bretagna si troveranno nella Classe 35.

Classe XCIII.

ESEMPLJ D' ABITAZIONI A BUON MERCATO COMBINATI COLLE CONDIZIONI NECESSARIE PER LA SALUTE E COMODITÀ.

Il soggetto dell' am miglioramento delle abitazioni delle classi operaje ha occupato per molto tempo l' attenzione pubblica in Inghil-

terra. Quelli che assistettero all' Esposizione di Londra nell' anno 1851 possono senza dubbio rammentarsi delle case d' alloggio fabbricate sotto l'ordine del defunto Principe Consorte in congiungimento coll' Esposizione, e che attiravano una attenzione così grande. D'allora in poi gli ottimi mezzi per migliorare le abitazioni delle classi operaje sono stati considerati vivamente dalla Società delle Arti, come anche da altre società e individui particolari, e molte grandi case per l' uso delle classi operaje furono fabbricate in diverse parti della città; ma benchè molto si sia operato, la maggior parte delle classi povere sono condannate ad abitare in case miserabili. L'estensione delle strade ferrate ed i miglioramenti pubblici sono la cagione che la richiesta di case all' uso degli operaj nella metropoli cresce d'anno in anno. Qualche alloggio è stato accordato dal trasporto dei lavoranti da uno o due delle compagnie delle strade ferrate a prezzo basso quà e là nei sobborghi, e se questo favore fosse concesso da tutte le compagnie delle strade ferrate di questa città, un gran vantaggio ne risulterebbe. Si deve, però, rammentarsi che l' ora mattutina alla quale gli operaj principiano il lavoro impedisce che le loro abitazioni siano ad una distanza grande dalla loro occupazione. La mancanza d' alloggio convenevole per le classi operaje non è sfortunatamente limitata a questa metropoli, ma è provata in quasi tutte le città grandi del regno come nei distretti agricoli, ed infatti ha ora preso delle proporzioni così vaste che non si può mitigarla altrimenti che per imprese effettuate con mezzi straordinari. Si spera che gli oggetti esposti in questa classe saranno i mezzi da svegliare una sollecitudine anche più viva per questo importante lavoro.

REPORT.

The Select Committee appointed at a General Meeting of the Associate Commissioners for the History of Labour, held at the South Kensington Museum on February 1, 1867, having completed the task entrusted to them by the Lord President of the Council, of soliciting contributions to the Exhibition in Paris, and selecting such objects as, in their opinion, would best illustrate the progress of industry in the British dominions, beg to present the following report of their proceedings.

In doing so, they are anxious to guard against an impression being made either in England or abroad, that, in giving their sanction to the objects actually selected for exhibition, they conceive the collection to be complete. They regret to be obliged to state that the success which has attended their endeavours is not such as they had hoped, and that the collection they have made cannot be looked upon as conveying an adequate representation of the degree of excellence to which the several branches of Art manufacture have attained in this country.

The result of the efforts of the Committee would have been more satisfactory but for the reluctance of a large number of those to whom they applied, to incur the risk of possible injury to their property.

To this cause may further be added the

scantiness of the space allotted to the British Commission for this department of the Exhibition. The Committee have reason to fear that want of space will compel H. M.'s Commissioners to decline to send some of the most important objects.

The apprehension above alluded to is not, in the opinion of the Committee, justified, inasmuch as the precautions taken by the English and French Governments, through the exertions of the late and present Lord President of the Council, together with the satisfactory terms on which ample insurances have been effected, afford as full a guarantee as can be obtained.

The readiness with which Her Majesty graciously consented to head the list of contributors with so magnificent a selection of Ancient Royal Plate, and the confidence thereby manifested by Her Majesty, has had a material effect on the success and completeness of this branch of the History of Labour.

With these observations it only remains for the Committee to submit to Her Majesty's Commissioners the following list of objects of British Workmanship, together with the names of those who have kindly contributed their valuable works of Art.

[Signed]

CADOGAN.

South Kensington Museum, April 8, 1867.

COLLECTION OF EARLY ANTIQUITIES FROM THE BRITISH MUSEUM.

CORRESPONDING IN DATE TO THE FIRST, SECOND, AND THIRD EPOCHS OF ART, AS FIXED BY THE FRENCH COMMISSION.

(They have all been discovered in England and Wales.)

CASE A.

PANEL I.

DRIFT PERIOD (*Époque quaternaire*).

[The flint implements about to be described are found in beds of gravel of a certain kind, termed by geologists the drift; in which they are mingled with the bones of mammoth (*Elephas primigenius*) and other extinct animals. They are peculiar in form, and have been made by chipping; they are never ground or polished.]

1. FLINT IMPLEMENT, with sharp chipped edges. Discovered about the year 1797, in the drift at Hoxne, in Suffolk.
2. FLINT IMPLEMENT, imperfect at the point. Found near Thetford, in Norfolk.
3. FLINT IMPLEMENT, found near Thetford, in Norfolk.

4. FLINT IMPLEMENT. Found near Thetford. It shows part of the external surface of the flint.
5. FLINT IMPLEMENT, from Shrub Hill, near Thetford.
6. FLINT IMPLEMENT, from Shrub Hill, near Thetford; showing part of the outside.
7. FLINT IMPLEMENT, from Icklingham, in Suffolk, 1863.
8. FLINT IMPLEMENT, from Milford Hill, near Salisbury.
9. IMPLEMENT, of deep amber-coloured flint. Found at Herne Bay, in Kent.
10. FLINT IMPLEMENT, from Herne Bay, in Kent; showing much of the outer coating of the pebble from which it has been made.

STONE PERIOD (*Âge de la Pierre*).

11. HAMMER, made out of stag's horn. Found in the bed of the Thames, near Kew, in Surrey.
12. AXE-HEAD, made out of stag's horn, one end rounded, the other bevelled off; the shaft hole is quadrangular. Found in the Thames, near Kew.
13. FLINT CORE, from which flakes have been struck. Found at Whittington, co. Gloucester. With flakes and scrapers.
14. FLINT SCRAPER, very similar in form to those from the caves of France. Found near Leeds Castle, Kent.
15. SET OF SIX FLINT IMPLEMENTS, made out of flakes; two of them are scrapers. Found at Possingworth, near Waldron, in Sussex.
16. SET OF FIFTEEN FLINT IMPLEMENTS, consisting of flakes, scrapers, a leaf-shaped arrow head, a barbed arrow head, and two peculiar triangular implements. All found on the Wolds of Yorkshire.
17. LONG FLAKE, delicately chipped at the side. Found in Cornwall.
18. FLINT DAGGER, carefully chipped all over. Found in the Thames. This is a rare specimen.
19. THREE FLINT ARROWHEADS. Found in a barrow on Lambourne Down, Berkshire.
20. FLINT CELT chipped, but not polished, having been probably considered too thin to undergo that process. Found in a barrow in Hampshire with No. 28.
21. FLINT CELT, chipped, preparatory to being polished; the edges have been smoothed. This type is characteristic of the Eastern Counties. Found at Great Bealings, in Suffolk.
22. FLINT IMPLEMENT, rudely chipped, and possibly a block, prepared for striking off long flakes. Found in the River Thames.
23. CELT, of sulphur-coloured flint. Found in the Thames. It is peculiar for the sharpened end being much rounded.
24. CELT, of dark-brown flint. Found in the Thames, the mud of which has prevented the surface from becoming altered.
25. CELT, of grey-flint. Found in the Thames. It resembles in form No. 21; but is polished all over.
26. CELT, of brown flint. Found in the Thames. Of a narrow type.
27. CELT, of an agate flint, and finely marked. Found in England.
28. CELT of flint, whitened by age, and highly-polished; it is peculiar for the diagonal form of the blade. Found in a barrow in Hampshire.

29. CELT of a rusty-brown flint, recently injured at the sharpened end. It was found in Kensington, near London, in 1864.
30. CELT of grey and unaltered flint; thin and quadrangular in shape, flat on one side and slightly convex on the other. Found in the Thames.
31. CELT of grey trap, apparently diorite, very rounded in form. Found in the Thames.
32. SMALL CELT, of pale grey stone, a kind of diorite. Found in a barrow at Alfriston, Sussex.
- 32A. FLINT KNIFE OR ARROW HEAD, the upper part bound round with moss to form a handle. Found in Ireland. (In Case B.)
Lord Talbot de Malahide.

PANEL II.

BRONZE PERIOD (*Âge du Bronze*).

[Stone axeheads, pierced with shaft holes, are occasionally found in barrows accompanied by bronze daggers; they are usually, therefore, referred to the bronze period.]

33. STONE AXEHEAD, made of granite, polished; it has a circular shaft-hole, and is sharp at one end and blunt at the other. Found at Stanwick, Yorkshire.
34. STONE AXEHEAD, of dark syenite, with oval shaft-hole, rounded at one end, sharpened at the other. Found in the Thames.
35. STONE AXEHEAD, thick and rounded at one end, moderately sharp at the other; round shaft-hole. Found in the Thames, London.
36. HAMMER-HEAD of granite, blunt at both ends, with a large circular shaft-hole. Found in the Thames, London.
37. LUMP OF PURE COPPER, as smelted. Found at Welwyn, co. Hertford, with bronze celts imperfectly made and unfinished.
38. BRONZE SOCKETED CELT, not trimmed off. Found at Welwyn, with No. 37.
39. LUMP OF COPPER. Found at High Rooting, in Essex, with similar lumps, and a number of bronze celts.
40. BRONZE SOCKETED CELT. Found at High Rooting, with the copper, No. 39.
41. CAST, from a four-sided stone mould, for casting spearheads and celts; each side has a different mould. The original is made of a kind of hone stone, and was found in the Island of Anglesea.
42. BRONZE MOULD, for casting solid celts with loops (palstaves). It is made in two pieces, and on the outside are ornaments like 'cord, which have the appearance of having been cast from actual cord. Found in South Wiltshire.
43. BRONZE MOULD, for casting socketed celts,

with one of the celts found in it. It is in two pieces, and was discovered in Yorkshire.

44. BRONZE LEAF-SHAPED SWORD, of very unusual size, being the longest specimen in the British Museum (31 in.). It has been broken across and mended. It has eleven holes for the rivets of the handle, five of which remain. Found at Battle, Sussex.
45. CELT, solid bronze, of the simplest form. This type is rare in England, though very common in Ireland. Found at Exning, Suffolk.
46. CELT, solid bronze, of a similar form to the last, but more recurved at the edges, and much ornamented with engraved lines. Found in the neighbourhood of York.
47. CELT, bronze, with broad blade and slight flanges at the sides for the handle. Found in the Isle of Wight.
48. CELT, bronze, of the same form as No. 47, but with a slight prominence across the blade to assist in fixing the handle. Found at Mildenhall, Suffolk.
49. CELT, bronze, with flanges at the sides, and a stop-ridge across the stem. The blade has ribs in relief. Found at Goudhurst, Kent.
50. CELT, bronze, of a similar form to the last, but with a loop at the side. Found in Cambridgeshire?
51. CELT, bronze, unusually small, with loop and stop ridge. Found at Stibbard, in Norfolk, with others of the same type, all unfinished.
52. CELT, bronze socketed, hexagonal in section, with loop at the side. Found in Cambridgeshire.
53. CELT, bronze socketed, square in section, with loop, and ornamented with lines and circles in relief. Found in the Thames?
54. HAMMER, bronze, square, with socket. Found at Thorndon, in Suffolk, with Nos. 55-58. An object of great rarity.
55. GOUGE, bronze, with socket. Found at Thorndon, in Suffolk.
56. KNIFE, bronze, with socket, and two rivet holes. It appears that such knives had short handles, and were fixed to them with two wooden rivets. Thorndon, Suffolk.
57. AWL, bronze. Found at Thorndon, Suffolk. An object of excessive rarity.
58. SPEARHEAD, bronze, with leaf-shaped blade, and two rivet holes; the socket is ornamented with engraved bands. Found at Thorndon in Suffolk.
59. DAGGER BLADE, bronze, very broad and flat, with five large rivets, near which may be distinguished the marks of the handle. Found in a barrow at Homington, Wilts.

60. SPEARHEAD, bronze, of peculiar form; it has a fluted blade, and a long tang, over which was passed a ferul to keep the blade in the wood. Found in the River Lea, near Stratford-le-Bow, Essex.

61. TORQUES, bronze. Found in Dorsetshire.

6. ARMLET, bronze, solid, and of a lozenge section. Found in Dorsetshire, with No. 61.

63. ARMLET, bronze, heavy and solid, cylindrical in section, and ornamented with engraved lines. Found at Liss, in Hampshire.

PANEL III.

[A continuation of the illustrations of the bronze period; but all the objects have been discovered in the River Thames, at or near London.]

64. SHIELD, circular bronze, with convex boss, and concentric rings. It has a handle, and shows marks of a spear and sword cut; the small loops which are usually found in these shields have been anciently cut away. Found in the Thames, London.

65. SWORD, bronze, of a broad type, which seems peculiar to the Thames Valley; in the handle plate is a long slit, and six rivet holes. Thames.

66. SWORD, bronze, of peculiar and highly finished make; the handle plate is without ridges, and retains five out of the six rivets for the handle. Thames.

67. END OF SWORD SHEATH, bronze, very beautifully and evenly cast; about half-way down is a rivet hole, to fasten in the wooden lining, of which a portion remains. Thames.

68. DAGGER, or SWORD, bronze, unusually slender; it has had two large rivets for the handle, one of which remains.

69. DAGGER, bronze; it has two rivet holes. Thames.

70. DAGGER, bronze, of fine work, with two large rivets; the traces of the handle are very distinct. Thames.

71. KNIFE OR DAGGER BLADE, bronze, with two rivets. Thames.

72. KNIFE, bronze, with a single rivet. Thames.

73. SPEAR-HEAD, bronze, of unusual size and fine form. Found in the Thames at Coway Stakes, the spot at which Cæsar is supposed to have crossed the river.

74. SPEAR-HEAD, bronze, leaf-shaped, in fine preservation, with long socket and rivet holes. Thames.

75. SPEAR-HEAD, bronze, with long socket, two small openings in the blade, and no rivet holes. Thames.

76. SPEAR-HEAD, bronze, of peculiar form, with

loops attached to the lower end of the blade; no rivet holes.

77. SPEAR-HEAD, bronze, with two loops on the socket, and with ornamental ribs on the blade. Thames.
78. SPEAR-HEAD, bronze, very rare form, probably used in hunting. The blade is barbed, and through the rivet holes is passed a long and projecting rivet of bronze. Bronze rivets have been found in England in spears of this kind, only the rivets in the other kinds having been made of hard wood. Found in the Plais-tow Marshes, on the banks of the Thames.
79. CELT, bronze (palstave), very carefully made and hammered at the sides. It was found with a bronze sword, spear-head, and pin, in the Thames, near the mouth of the Wandle.
80. CELT, bronze socketed, with loop. Thames.
81. CELT, or CHISEL, diminutive bronze, of rare form, with a tang to enter the handle. Thames.

PANEL IV.

LATE KELTIC (*Première Âge du Fer*).

[The specimens in this class show great beauty of workmanship and great singularity in their ornaments. They are chiefly horse-trappings, many of which have been enamelled. The enamelled decoration illustrates an oft-quoted passage in Philostratus, who speaks (Icones, I. xxviii.) of the barbarians who live in the ocean (τοὺς ἐν Ὠκεανῷ βαρβάρους), having a process for fixing colours to brass horse-trappings. Such horse-trappings have not hitherto been found out of the British Isles.]

82. HORSE'S-BIT, bronze, with a few engraved lines. Found at Polden Hill, Somerset.
83. HORSE'S-BIT, bronze, with remains of enamelled decorations, principally red. Polden Hill.
84. RING, from horse-harness, bronze. With engraved patterns and circular ornaments of enamel. Polden Hill.
85. RING, bronze, similar to No. 84, but with triangular ornaments of enamel. Polden Hill.
86. RINGS (pair of), bronze, less richly ornamented, but of the same kind as Nos. 82 to 85. Polden Hill.
87. RING FOR HORSE FURNITURE, bronze; the lower part expands, and is ornamented with a scroll of elegant design, on an opaque red enamelled ground. Found at Westhall, in Suffolk.
88. FLAT PLATE of bronze, from horse furniture, of a singular form, and enamelled with scrolls of a Keltic pattern in red, white, blue, and green enamel. Found,

with another similar one, at Westhall, Suffolk.

89. TWO KNOBS, bronze, the terminations of iron pins, probably from a chariot. Found at Westhall, Suffolk. Height $1\frac{1}{2}$ in.
90. ORNAMENT FROM HORSE-TRAPPINGS, bronze, once enamelled. Found, with a great number of other specimens, in the camp at Stanwick, in Yorkshire.
91. RING FROM HORSE-HARNESS, bronze, with depressions for enamel. Stanwick, Yorkshire.
92. PORTION OF A HORSE-BIT, bronze. From Stanwick, Yorkshire.
93. SWORD, iron, in a bronze sheath, peculiarly ornamented; the handle is lost. Found at Stanwick, in Yorkshire. Several swords of this kind have been found in England.

ROMAN PERIOD (*Domination Romaine*).

[Roman remains being in all parts of the world very similar, a few specimens only have been sent, viz., some objects of iron and leather, remarkable for their preservation; and specimens of pottery made in Britain.]

94. KNIFE, iron, well preserved, with a bone handle, and a loop at the top. Found in London.
 - 95-100. SIX STYLI OF IRON FOR WRITING; the pointed end for writing on the wax, the flat for erasing; they are in a remarkable state of preservation, and two of them are ornamented with yellow metal. Three of them were found near the Royal Exchange, and three on the site of the Steel-yard, London.
 101. ROMAN LEATHER SHOE, cut out into loops at the sides, through the ends of which a cord or leathern tie was passed. Found in London.
 102. SOLE OF A ROMAN LEATHER SANDAL, with iron nails. Found in London.
 103. FRAGMENT OF A LEATHER SHOE, with loops cut out. Found in London.
 104. FRAGMENT OF A LEATHER SHOE, of more elaborate work. Found in London.
- ANGLO-SAXON PERIOD (*Epoque Anglo-Saxonne*).
105. SET OF SILVER PINS, partly gilt; they are three in number, and united by links. The heads are richly ornamented with interlaced patterns somewhat of an Irish style, and the workmanship is probably to be referred to the North of England, of which Lindisfarne and Durham were the principal centres, and from their connection with the Scoti, or Irish monks, adopted an Irish style of ornament. Probably 9th century. Found in the river Witham, at Lincoln.

Objects found in an Anglo-Saxon Cemetery on Harnham Hill, near Salisbury.

106. BOSS OF ANGLO-SAXON SHIELD, iron,

convex, and ending in a point; four studs to fasten it.

107. HANDLE OF SHIELD, iron.
108. SPEAR-HEAD, iron, of a long type, and with widely split socket.
109. SPEAR-HEAD, iron, of peculiar type; lozenge-formed blades, the sides of which are alternately depressed so that the weapon might rotate when thrown.
110. PLATE OF IRON, lozenge-shaped, used to cover part of the wood.
111. KNIFE BLADE, iron.
112. BUCKLE, iron.
113. STEEL, used for striking light.
- 114-116. Three flint chips, used probably with No. 113.

POTTERY.

[The pottery has been placed on the top of the case, and may be conveniently described together.]

117. BRITISH DRINKING CUP, of the stone period. Found in a barrow at Alfriston, Sussex. It has on it the impressions of a twisted cord.
118. VASE, of thin black Roman pottery; a castaway, and cracked in the baking. It was found in the Upchurch marshes in Kent, and was made at an extensive manufactory situated there, under the Romans.
119. ROMAN BOTTLE, grey, with a few ornaments. Found at Lincoln, on the site of the pottery.
120. ROMAN DRINKING CUP, of thin ware, with scrolls in relief. It is coated with colour. Though found in the Thames, this specimen was unquestionably made at the large Roman fabric of pottery at Caistor, Northamptonshire.
121. ROMAN BOTTLE, of dense pottery, painted brown and with white slip ornaments. Found on the site of a kiln in the New Forest, Hampshire.
122. DRINKING CUP, of dense brown ware, like stone ware. Found on the site of a kiln in the New Forest.
123. OPEN VESSEL, of pale grey ware, found in London, and probably made at a Roman pottery, of which the site was near the present cathedral church of St. Paul's, London.
124. VASE, of dull black ware, Anglo-Saxon; a fine specimen, ornamented with horizontal ribs round the upper part, and impressed patterns, some of which are fylots. Found at Shropham in Norfolk.
125. VASE, of black ware, Anglo-Saxon, with elaborate impressed ornaments. Found in an Anglo-Saxon cemetery at Frilford, Berkshire.

FOURTH AND FIFTH EPOCHS.

From the Departure of the Romans, A.D. 409, to the Norman Conquest, A.D. 1066.

151. CASKET, copper-gilt and enamelled; probably made for William or Aymer de Valence. About 1290-1300.

South Kensington Museum.

E 152. CUP and COVER, silver-gilt. The 'Lynn' Cup, enriched with translucent enamel. Date, the middle of the 14th century.

Corporation of King's Lynn.

153. SALT-CELLAR, silver-gilt, with pyramidal cover. Latter part of the 15th century. Given to the college by Walter Hill, in 1493.

New College, Oxford.

154. COCOA-NUT CUP, mounted in silver-gilt, resting on three figures of angels. Date, about 1450.

New College, Oxford.

155. COCOA-NUT CUP, mounted in silver-gilt; foliage round the bowl, rustic palisade round the foot. Date, early 15th century.

New College, Oxford.

156. MAZER BOWL, in silver-gilt mounting of the 15th century.

All Souls College, Oxford.

157. COVER, probably of a Nautilus cup, or of a navicula, silver-gilt, decorated with cloisonné and champlévé enamels. Date, about 1300-40.

All Souls College, Oxford.

158. CUP, known as the 'Grace Cup of St. Thomas-à-Becket'; ivory, mounted in silver-gilt. Date, 1445.

Philip H. Howard, Esq., of Corby.

B 159. MEDALLIONS (two), copper gilt and enamelled. One represents the Virgin with the infant Saviour seated under a canopy, the back-ground is enamelled red, and has two shields bearing the arms of the Cistercian Abbey of St. Mary-at-Warden, in Bedfordshire, *az.* three pears, or: the other medallion represents the Crucifixion, the back-ground is enamelled, and exhibits two croziers and the letters W. C., probably the initials of an Abbot, the border of each medallion is formed of winged angels. Date, 14th century.

The Trustees of the British Museum.

ARMOUR.

CASE. NO.

C 161. HELMET, Anglo-Norman, formerly in a church in Berkshire; probably belonging to the family of Curzon, who founded the church. Date, about A.D. 1100.

Hon. Robert Curzon.

162. HELMET, Anglo-Norman, with a close vizor, and flat top. Found in the ruins of Eynsford Castle, belonging to the family of Zouche. Date, about 1150.

The Earl of Warwick.

163. HELMET, flat-topped cylindrical, with a nasal, and a hook for attaching the mentoniere of chain mail. Date, about 1150.

Tower of London.

164. HELMET, cylindrical flat-topped, with an aventaille. Date, about 1160.

Tower of London.

165. HELMET, cylindrical, with an ornamental top. Dug up near Farnham, in Hampshire. Date, about 1180.

Hon. Robert Curzon.

166. HELMET, cylindrical, with an opening for sight in the form of a T. The crown no longer quite flat. Date, about 1200.

Hon. Robert Curzon.

167. HAUME, or Tilting Helmet? with a round top, and close vizor. Date, about 1250.

Hon. Robert Curzon.

168. HELMET, close, for the Tournament, with a very sharp-pointed crown, and the original chain of 31 links remaining. Date, about 1275.

Hon. Robert Curzon.

169. HELMET, with a moveable vizor, and a chain camail attached to it; the top round. Date, about 1350.

The Earl of Warwick.

170. BASINET, with a pointed vizor, and a gorget attached. Date, about 1360.

Tower of London.

171. SOLLERET, or foot armour, with long toe. Date, 14th century.

The Earl of Warwick.

172. ARMOUR (nine pieces), consisting of two leg pieces, two sollerets or foot pieces,

180. one stirrup, two gauntlets, and two pieces for the fore-arm. Date, 14th century.

The Earl of Warwick.

181. BASINET, which has had a pointed vizor and a gorget. This probably belonged to Thomas Beauchamp, Earl of Warwick. Date, about 1360.

The Earl of Warwick.

CASE. NO.

C 182. TILTING HELMET, resembling the helmet of Edward the Black Prince, which hangs over his tomb in Canterbury cathedral. Date, about 1370.

Hon. Robert Curzon.

183. TILTING HELMET, with the crown somewhat peaked. Date, about 1400.

Hon. Robert Curzon.

184. TILTING HELMET, of Richard Beauchamp, Earl of Warwick. It opens at the sides and back in a singular manner, and is exactly represented on his tomb, in the Beauchamp chapel, at Warwick. The spike on the top is for the crest of a swan's head, which is in existence. The Earl died 1435.

The Earl of Warwick.

185. TILTING HELMET. Date, about 1450.

Tower of London.

CARVINGS IN IVORY, ETC.

B 186. CHESS PIECES (sixteen), walrus ivory, to consisting of a king, a queen, two bishops, two knights, two warders (castles), and eight pawns. These were found, with a number of others, in the parish of Uig, Isle of Lewis, Hebrides. Date, latter part of the 12th century.

The Trustees of the British Museum.

O 202. TRIPTYCH, boxwood, carved with the Crucifixion, and figures of St. John Baptist, and St. John of Beverley. Date, about 1340.

Lord De l'Isle and Dudley.

JEWELLERY, ETC.

B 203. BROOCH, known as the 'Hunterston' Brooch; annular, white bronze, inlaid with delicate gold filigree, and granulated work, and set with amber bosses; a Runic inscription on the back. Found on the estates of Robert Hunter, Esq., at West Kilbride, Ayrshire, in 1830. Celtic. Date, about 11th century.

Robert Hunter, of Hunter, Esq.

204. BROOCH, known as the 'Tara' Brooch; white bronze, overlaid with plates of delicate gold filigree work, and set with amber and gems (much injured). Irish. Date, 12th century.

Messrs. Waterhouse, Dublin.

205. BROOCH, ring form, gold set with jewels, inscribed + IM IC VI. 14th century. Found at Sydling, Dorset.

Rev. C. W. Bingham.

CASE. NO.

O 206. CROSS, gold, with an enamelled figure of our Blessed Lord; a pectoral cross. 15th century.

Lady Rokewood Gage.

207. RING, gold, set with a large sapphire; an episcopal ring. 13th century. Found in Winchester Cathedral.

The Dean and Chapter of Winchester.

208. RING, gilt bronze, set with a paste imitation of a sapphire. Found in Winchester Cathedral, under the tomb of William Rufus, and supposed to have been the episcopal ring of Henry de Blois, Bishop of Winchester (died 1171).

The Dean and Chapter of Winchester.

209. RING, gold, set with a pale uncut ruby. Said to be about the date 1192.

Dean and Chapter of Wells.

210. RING, gold, broad hoop, chased with sacred subjects; a motto inside. Date, 13th century. *Rev. J. Beck.*

211. RING, gold, set with an amaldine garnet; an episcopal ring. Found at Wells. 15th century.

R. H. Soden Smith, Esq.

212. RING, gold, with inscription; a betrothal ring. Found in Westminster. 15th century.

R. H. Soden Smith, Esq.

213. RING, gold, set with a sapphire; an episcopal ring. Found near Norwich Cathedral. 13th century.

R. H. Soden Smith, Esq.

PRINTING.

D 214. BOOK. *Le Fèvre, Recueil des Histories de Troyes*, 2nd Book. Printed abroad by William Caxton, about 1470, and the first book printed in French.

The Trustees of the British Museum.

LEATHER WORK.

B 215. UPPER LEATHER OF A LADY'S SHOE (imperfect); *cuir bouilli*, ornamented in open work, with several figures, and inscriptions in French, including the motto, *honny soit qi mal y pense*. This was found in London, and, although the mottoes are French, various peculiarities in the language seem to show that the shoe was made in England, probably for a royal or noble personage. Date, latter half of 14th century.

The Trustees of the British Museum.

SEALS.

(See List at the end of the Tenth Epoch.)

SEVENTH EPOCH.

The Tudor Dynasty. From 1485 to 1603.

METAL WORK, INCLUDING PLATE, ETC.

CASE. NO.

N 216. EWER and SALVER, silver-gilt, chased

44. SEALS of English Abbeys, 13th century.

45. SEALS of English Abbeys, 14th, 15th, and 16th centuries.

PHOTOGRAPHS OF INDIAN ARCHITECTURE,

Exhibited by the Department of Science and Art.

SELECTED AND ARRANGED BY JAMES FERGUSSON, Esq., F.R.S.

Case 12.

HINDU ARCHITECTURE.

Case No. 12 contains illustrations of the Hindu architecture of Northern India, commencing with the examples of Orissa, on the shores of the Bay of Bengal, and proceeding westward to Dharwar, in the Bombay Presidency. The photographs are selected principally from a work entitled 'The Architecture of Dharwar and Mysore,' published by John Murray, 1866, and from the publications of Majors Dixon and Impey, and that of Mr. Beato; others are from Mr. Fergusson's private collection.

ORISSA.

The great temple at Bobaneswar was finished about the year 657 A.D., and is the oldest temple of its class known to exist in the north of India, as well as one of the largest and best finished.

The temple of Juggernaut, celebrated for its annual festival, was completed in the year 1198 A.D., and is among the latest of its class. Between these two there are at least 100 temples in Orissa of the same kind. These make up the largest and most characteristic group of the Northern Indian style which now exists.

1. The great temple, Bobaneswar
The Lion's Gate of the great temple
2. Tank to the east of the great temple
Group of temples to west of great temple
3. The Annuntu Basa Devi temple
The Mookteswar temple
4. The Pursuram Iswar temple
The Boital temple
5. The great temple of Juggernaut
The Mookteswar temple

BERAR.

Throughout Berar and the Saugur territories there are a great number of small detached temples which have as yet been only imperfectly examined. None of them seem older than the ninth or tenth century, and the series may be considered as ending with the Mahomedan conquest in the thirteenth. Some of them are remarkable for the beauty of their details, but none of those illustrated by the photographs in the case are of great dimension.

6. Temple at Koch Behar
Temple at Deo
Temple at Oomga

SAUGUR.

ORISSA.

Monolith at Jagepore
Monolith in front of temple of Juggernaut

DELHI.

Three sides of the courtyard of the mosque which the Mahomedans erected at the Kootub on their first taking possession of Delhi (1297) are composed of fragments of Hindu, or rather Jaina, architecture, which have been rearranged so as to suit the purposes of the invaders. As will be seen from the illustrations, the result is singularly picturesque, though, from the mode in which the pillars are used, hardly in the best taste.

Temple at Banghur

DHARWAR.

The following thirty-two photographs represent the Northern Hindu style as practised in the Bombay Presidency, from about the tenth century to the present time. Few of the temples are large, but many of them are distinguished by great beauty of detail, and consider-

able elegance of outline. The photographs of Dharwar and Mysore were taken principally by Col. Biggs, R.A., and Dr. Brisbane Neill.

39. Colossal bull at Chamondee
Colossal bull at the French Rocks

The temple of Hullabeed,* in the Mysore Territory, was erected in the thirteenth century, and dedicated to the worship of Siva. It never was completed; the works having been stopped by the Mahomedan invasion in 1310. Notwithstanding this, it is one of the most remarkable temples in India, both as regards the extent of its ornamentation and the beauty of its details.

Case 15.

HINDU ARCHITECTURE.

Case No. 15. The illustrations commence with the earliest rock-cut examples in Behar (B.C. 200), and are arranged so as to exhibit the peculiarities of the series of the caves of Western India, at Karlee, Elephanta, and Ellora. Ten views are devoted to the architecture of the city of Oudeypore, and the next forty-six to the style of architecture prevailing in the South of India. To complete the series, and as a means of comparison, ten views have been added of Burmese architecture, and ten from the temples of Cambodia.

BEHAR.

The Lomas Rishi is the oldest known cave in India possessing any architectural features. These, as will be observed, are all copied from wooden constructions. The date of the cave is 200 to 250 B.C.

1. Lomas Rishi Cave
Lomas Rishi Cave
Sat Gurba Cave

KARLEE.

The Karlee Cave is the oldest and largest of its class in Western India. It still shows how great the influence of wooden construction was at the period of its excavation (about the Christian era); all the framework of the front, and the ribs of the roof, being still in wood, and only the smallest details represented in stone. The western cave photographs are all by Mr. Hinton.

2. Exterior of cave
Cave; interior of great hall

ELEPHANTA.

The Elephanta Cave, in Bombay Harbour, is one of the best known in India. It was excavated probably in the tenth century of our era, and dedicated to the worship of Siva. As will be observed, it is extremely similar to the Dooma Lena Cave at Ellora (Nos. 14 and 15):

3. Entrance to cave
The Lions' Cave; exterior
4. Interior of cave; nuptials of Siva and Parbutty
Interior of cave
5. Interior of cave; western aisle
Cave; interior from entrance

ELLORA.

The Ellora series of caves is one of the most extensive in India. It commences with a Buddhist group, the Dehrwarra and Viswa Karma—dating from the eighth or ninth century of our era—culminates in the Kailas, a Sivite temple in the Southern Hindu style of the tenth century, and closes with a Jaina group—the Indra

Subha—in the twelfth or thirteenth centuries. The illustrations are arranged as nearly as possible in the order of their dates.

BEEJANUGGER.

The porch of the great temple of Vitoba, at Beejanugger, is one of the most remarkable of its class. It is wholly of granite, each of the piers being cut out of a single block. It was erected in the sixteenth century, and never was completed. The car of the god is also of a single stone.

The last five views, 34 to 36, with those of Chamoondce, in Mysore, represent the more modern form of the Southern Hindu style. The photographs of Beejanugger are principally by Dr. Neill.

* Two general views of the temple of Nakhon Wat are on the walls in Frame 10.

Case 10.

MAHOMEDAN ARCHITECTURE.

The first twenty-six frames in this case are devoted to the illustration of the Mahomedan architecture of Northern India, commencing with the old mosque at Delhi, erected in the beginning of the thirteenth century, and terminating with the modern buildings of Lucknow. The remaining frames are devoted to the cities of Beejapoor, Ahmedabad, and Mandoo. The photographs are selected principally from a large work 'On the Architecture of Beejapore;' and another on that of 'Ahmedabad,' published by John Murray last year, and from the works of Major Impey and Mr. Beato before alluded to. Others are from Mr. Fergusson's private collection.

DELHI.

The buildings at the Kootub were commenced by Kootub-u-deen-Ibek, the first governor of Delhi (1297), but completed principally by Altumsh, his successor, 1210-1235. They are remarkable for the strange admixture of Hindu details with Mahomedan form. From these early examples the series of illustrations is tolerably consecutive till the decay of art and the fall of the great Mogul dynasty.

BEEJAPPOOR.

The city of Beejapoor, in the Deccan, was founded by Jusuf Khan in 1501, but except the two first buildings, made up of Hindu remains, its architectural development only commenced with Ali Adil Shah, 1557, and closed with the second of the same name, 1660; so that all great buildings are comprised within one century. The Gol Goomuz, or tomb of Mahmood, is probably the most remarkable domical building in the world, the floor space being greater than that of the Pantheon in Rome. The Ibrahim Rôza is one of the most elaborately ornamented specimens of Mahomedan art in India, and the great mosque one of the finest of its class. The architectural drawings which illustrate this set were made by A. Cumming, Esq., C.E.; the picturesque photographs by Col. Biggs, R.A.

AHMEDABAD.

The city of Ahmedabad was founded by Ahmed Shah, 1411, and, after little more than 150 years of prosperity, was absorbed into Akbar's Empire, 1583. As all its principal buildings were erected in the latter half of the fifteenth century, and overlap one another, no chronological arrangement of them has been attempted. This is of less importance in this case, as they are characterised by a singular uniformity of style, arising from the employment throughout of Hindu architects to carry out the forms of Mahomedan art. The result of this admixture of styles is an elegance of detail and an originality of forms which render this group perhaps more interesting than any other examples of Saracenic art in India.

Case 16.**PHOTOGRAPHS BY STEPHEN BOURNE.**

Case No. 16 contains a selection from the photographs of Northern India, made and published by Messrs. Shepherd and Bourne, of Simla. Some of these illustrate the same buildings as those represented in the photographs in the three first cases, but in themselves they form a very complete illustration of the architecture of the western and northern parts of the Bengal Presidency. The arrangement in this case is partly geographical, partly chronological.

SARNATH.

The Tope of Sarnath is one of the few Buddhist remains that exist in anything like a perfect state in Bengal proper. Its date is not very well ascertained, but it probably assumed its present external form in the tenth century. The carving in the lower part is peculiar, but very elegant.

1. Ancient Buddhist tope
Remains of brick tope
2. Carving on Buddhist tope
Carving on Buddhist tope

BENARES.

Benares is one of the most picturesque and beautiful cities in India, and may be one of the oldest. No building, however, exists in it now whose date is anterior to the thirteenth century; almost all those on the banks of the river, as represented in the accompanying photographs, being of comparatively recent date.

3. General view from opposite bank of Ganges

7. Carvings on Rajah Amehti's temple

HURDWAR.

View from opposite bank of the Ganges

GWALIOR.

The fort of Gwalior is one of the finest of its class in India. Its temples and the Jaina sculpture on the sides of the rock on which it stands range from the tenth to the sixteenth centuries. The palace was built by Maun Sing,

1486-1516, and some Mahomedan buildings were added after it fell into the power of the Delhi emperors.

8. The palace and principal entrance

KASHMIR.

The style of architectural design in Kashmir differs in many essential respects from that found in any other part of India, and betrays in every detail the influence of the classical feeling introduced through the Greek kingdom of Bactria. The one known exception to this is the Tukht-i-Soliman, which is in the Hindu style.

In other instances the practice of employing the deodar pine-wood as the principal building material, which is almost universal in the hills, has strongly influenced both the Mahomedan and Hindu styles of the valley. Illustrations of this wooden architecture will be found in Frames 20 and 21.

FUTTEHPORE SIKRI.

Futtehpore Sikri, near Agra, was long the favourite residence of Akbar (1556-1605), the greatest sovereign of his race, and he adorned it with a series of buildings as remarkable as anything of their class to be found in India. A strong feeling for Hindu art prevails throughout, though not to the same extent as at Ahmedabad, and the whole is stamped with that bold originality which marked every act of the great man to whom they owe their origin.

His tomb at Secundra is in the same style, and exhibits the same originality, as the building at Sikri.

The buildings of Agra, Delhi, and Lucknow, have already been alluded to in describing the contents of Case 10.

ILLUSTRATIONS AND RESTORATIONS OF THE AMRAVATI TOPE.

By JAMES FERGUSON, Esq., F.R.S.

The illustrations of the *Amravati Tope* consist of photographs made by Mr. Griggs, under the superintendence of Dr. Forbes Watson, from marbles in the East India Museum, which were brought home principally by Sir Walter Elliot from a great Buddhist monument existing on the banks of the river Kistnah, not far from its mouth, in the northern part of the Madras Presidency. The original name of the city to which it belonged was Dharanikota. Amravati is a modern city erected only seventy years ago.

As will be seen from the coloured plan on the wall, what now remains of the monument consists of two stone enclosures 12 feet apart, the outer of these being internally 195 feet in diameter. It originally consisted of upwards of 100 pillars richly sculptured in their inner faces, but less profusely on the external side. The whole height with the frieze and basement was about 14 feet.

The two pillars in the centre of the room belong to this rail, and are perfect for about two-thirds of their height. The two frames in the wall (Nos. 1 and 2) contain restorations of the rail in so far as the remains in the East India Museum would admit of this being done. Their scale is one-twelfth of the real size. The two circular slabs of marble beneath these frames are examples of the mode in which the inner and outer faces of the intermediate rails were ornamented.

The inner circle was solid, and half the height of the outer, and even more profusely sculptured than the external rail. A portion of

this screen, restored from the fragments in the East India Museum, is shown in the lower part of frame No. 4. Its ornaments were principally representations of the Tope or Dagoba itself. Ten of these, double the scale of the other fragments, are in two frames (Nos. 3 and 5) on the wall. So far as can be made out from the remains, between forty and fifty such representations originally existed, similar in general outline, but all differing in the scenes and emblems represented upon them. One of the smaller type of these dagobas stands on the floor under the frames.

In the centre of the enclosure there originally stood a dagoba similar in general outline to the largest of the three exhibited in Frames 3 and 5, but, so far as can be made out from the fragments found on the spot, measuring about fifty feet in height by about thirty to forty feet in diameter.

The erection of this monument was commenced apparently in the second or third century of our era, and discontinued before the beginning of the sixth.

The monument is chiefly interesting from the extent and beauty of its bas-reliefs, which illustrate to a greater extent than any other known monument, the legendary history of Buddhism as it existed at the time of its erection. It is moreover especially so from its displaying a larger admixture of serpent worship with Buddhism than is found anywhere else in India. In this respect the Amravati Tope is, so far as is now known, nearly unique.

THE SANCHI TOPE.

SOUTH WALL.

As a means of comparison, two frames are placed on the wall containing illustrations of the *Sanchi Tope*, near Bhilsa. This monument is between two and three centuries older than that at Amravati, some parts of it being anterior to the Christian era. Its surrounding rail, as seen in Frames 6 and 7, is much more simple,

and is indeed almost entirely without ornament, but its gateways (in Frame 7) are as elaborate as anything at Amravati. Their constructive details, with those of the rail, betray their wooden origin, which is characteristic of all the early structural monuments of India. No image of Buddha is found amongst the ornaments of these gateways, and snake worship can hardly be detected.

On the other side of the doorway are placed some fragments of Hindu sculpture sent home by Sir Bartle Frere, late governor of Bombay. They are taken from the ruins of a Hindu temple in Rajpootana, and are probably of the fifteenth century.

WEST WALL.

Frame 8. Map of India, with the names of those places illustrated by the photographs in the collection.

Frame 9. General view of the great temple at Hullabeed; see Case 12.

Frame 10. Two general views of the temple of Nakhon Wat, in Cambodia; see Case 15.

Frame 11. Six views of buildings at Ahmedabad; see Case 10.

Frame 12. Six views of buildings in Dharwar and Mysore; see Case 12.*

Frame 13. Three views of Beejanugger; see Case 10.

Frame 14. Pendant from centre of dome of Jain temple of Vimala Sah, at Abu; eleventh century.

Frame 15. Enlarged view of window of Seedee Syeed's mosque; see Case 10.

Frame 16. Two views of palace at Deeg; see Case 12.

* The three works on 'Dharwar and Mysore,' on 'Beejapoor,' and 'Ahmedabad,' are in the Indian court of the Exhibition. Besides a great number of photographs not shown in these cases, they contain historical essays by T. C. Hope, Bombay Civil Service, and Col. Meadows Taylor, together with architectural descriptions of the buildings by James Fergusson.

NOTE.—COLLECTION OF MODERN ART.

In her public collections, England, with few exceptions, does not possess any of the works of her living artists which have been produced since 1855. The best examples of her Painters, admissible to the Exhibition, according to the rules, are the property of private purchasers, and the ornament of their homes. Such treasures are at all times borrowed with difficulty, which has in this instance been greatly increased by the risk of removal to a foreign country, and by the many recent Exhibitions of pictures on loan in England. For these reasons the art of the English School does not receive its full illustration in the present collection. In Painting, more especially in oil, the works of several distinguished artists do not appear, while some others are but inadequately represented. In Sculpture the difficulties were further increased by the absence of appropriate space, and the injuries which unavoidably happened in the transport of marble groups to the former Exhibition, and English sculptors have made only few contributions.

NOTE.—ŒUVRES D'ART MODERNE.

Dans ses collections publiques, l'Angleterre, sauf quelques exceptions, ne possède de ses artistes vivants, aucune des œuvres produites depuis 1855. Les meilleurs tableaux de ses peintres, et qui rentrent dans les conditions d'admissibilité à l'Exposition, sont des propriétés particulières, et ornent les habitations de ceux qui les possèdent. C'est toujours avec difficulté que l'on prête de semblables trésors, et ces difficultés sont plus grandes encore, lorsque, comme dans la circonstance présente, les risques que l'on court augmentent par suite du transport des œuvres dans un pays étranger; si l'on ajoute à cela les diverses expositions de tableaux prêtés qui ont eu lieu dans ces derniers temps, on comprendra pourquoi les spécimens d'Art exposés ne représentent qu'incomplètement l'École anglaise. En ce qui concerne plus particulièrement la peinture à l'huile, plusieurs artistes distingués ne sont pas représentés, tandis que quelques autres ne le sont que d'une manière insuffisante. Pour ce qui regarde la Sculpture, on a également rencontré des difficultés sérieuses à cause du manque d'emplacement d'abord, et des accidents survenus dans le transport des groupes de marbre lors de l'exposition précédente. Les sculpteurs anglais ont donc fait des envois très-restreints.

Cooking ranges and stoves, as arranged for the South Kensington Museum
Grilles et poêles de cuisine, en usage au Musée de South Kensington
Kochherde und Oefen arrangirt für das Museum in South Kensington
Focolari e stufe da cucina, disposte come pel Museo South Kensington
- 28 JOHNSTON, FRASER, & Co., 66 Gordon-street, Glasgow
Lobby lanterns, gas stoves, translucent lamp, &c.
Lampes pour antichambres, poêles à gaz, lampe diaphane, etc.
Lampen für die Halle, Gasöfen, durchscheinende Lampen etc.
Lampioni per vestibolo, stufe a gas, lumi traslucanti, ecc.
- 28A KENSETT, JAMES, Beaumont-sur-Oise, France
Patent candlesticks
Chandeliers brevetés
Patentirte Leuchter
Lampade patentate
- 29 KING & BROWN, 27 Edward's-street, Portman-square, London (see Testing House)
Patent Brighton lamp
Lampe brevetée, dite de Brighton
Patentirte Brightoner Lampe
Lume detto di Brighton (patentato)
- 30 LEONI, SIGISMUND (see Class 53)

- 32 LONDON WARMING AND VENTILATING COMPANY (Limited),** W. Woodcock, Secretary, 12 Abingdon-street, London (see Testing House)
Warming apparatus (Gurney's patent), &c.
Calorifères (brevet Gurney), etc.
Erwärmungs-Apparat (Gurney's Patent) etc.
Calefattori (patente Gurney), ecc.
- 33 LEAMINGTON KITCHEN RANGE COMPANY**
A cottage range; improved kitchen ranges
Grille de cuisine pour habitations rurales; grilles de cuisine perfectionnées
Ein Herd für eine Hütte; verbesserte Küchenherde
Focolare da cassetta; oculari da cucina perfezionati
- 34 *MULLINER, HENRY,** Chapel-street, Leamington (see Testing House)
Improved kitchen cooking ranges
Grilles de cuisine perfectionnées
Verbesserte Kochherde
Focolari da cucina
- 35 MUSGRAVE BROTHERS,** Ann-street, Belfast (see Testing House), (Appendix, pp. 304-5)
Slow combustion stoves (patent)
Calorifères à combustion lente (brevetés)
Langsam brennende Oefen (patent)
Stufe a combustione lenta (patentate)
- 36 MCSHERRY, M.,** Limerick
Kitchen range
Grille de cuisine
Küchenherd
Focolari da cucina
- 38 PERKINS, LOFTUS,** 6 Seaford-street, London
Military portable oven (see Testing House)
Four portatif pour l'usage de l'armée
Tragbare Militäröfen
Forno militare portatile
- 39 PHILLIPS, THOMAS,** 55 Skinner-st., London (see Testing House)
Apparatus for roasting and heating by gas
Appareil à gaz pour le rôtissage des viandes et pour le chauffage
Gasapparat zum Rösten und Heizen
Apparato per arrostitore e riscaldare a gas
- 40 PHILLE, CHARLES JAMES,** 20 Caroline-street, Birmingham
Lamps—*Lampes*
Lampen—*Lumi*
- 41 RADCLYFFE & Co.,** Old Town Foundry, Leamington
Prize kitcheners
Fourneaux et ustensiles de cuisine
Preis Kochherde
Cucine premiate
- 42 ROWATT, THOMAS, & SON,** Lothian-road, Edinburgh
Paraffine lamps and mineral oil
Lampes pour brûler la paraffine. Huile de schiste
Paraffinlampe und Steinöl
Lumi a parafina e a olio minerale
- 43 *RUSSELL, GEORGE F.,** 16 Newton-street
Vegetable gasometer, &c., for domestic purposes (see Testing House)
Appareil pour la production du gaz extrait de matières végétales, etc., pour la consommation domestique
Vegetabilischer Gasometer etc. für häusliche Zwecke
Gasometro vegetabile, ecc., per uso domestici
- 44 SCHOLL, JOHN,** 41 Berwick-street, Soho, London (see Testing House)
Patent platinum gas perfectors
Bees à gaz perfectionnés de platine (brevetés)
Patentirter Platin-Gasbrenner
Perfezionatori del gas in platino (patentati)
- 45 SOLOMON, JOSEPH,** 22 Red Lion-square, London (see Testing House)
Lamps for burning magnesium metal
Lampes à brûler le magnésium
Lampen zum Brennen von Magnesium
Lumi a magnesio
- 46 STEEL & GARLAND,** Wharnccliffe Works, Sheffield
Stove-grates, fenders, &c.
Grilles de poêles, gardes-feu, etc.
Roste für Oefen, Feurrätter etc.
Grate da stufe, parafuochi
- 47 STRODE & Co.,** Gas Fitters, 16 St. Martin's-le-Grand, London (see Testing House, and also Architectural Court)
Sun burner
Globe pour l'éclairage au gaz
Sonnengleicher Gasbrenner
Becco da gas detto solare

Photometers, street lamp governor, patent valve, pressure gauges, mechanical ventilator
Photomètres, appareil pour régler l'éclairage de la voie publique, soupape brevetée, manomètres, ventilateur mécanique
Photometer, Regulator für Strassenlampen, patentirtes Ventil, Manometer, mechanische Ventilatoren
Fotometri, regolatori da lampioni di strade, valvola patentata, staze di pressione, ventilatore meccanico
- 49 SULLIVAN, JOHN,** St. Helier, Jersey
Patent lamps, and corkless stopper bottles
Lampes brevetées, bouteilles bouchées par un ressort sans liège
Patentirte Lampen, Flaschen, die sich ohne Stopfer verschliessen
Lumi patentati, e turaccioli da bottiglie senza sughero
- 50 THE GENERAL IRON FOUNDRY COMPANY,** 43 Upper Thames-street, London (see Testing House)
Stoves—*Calorifères*
Oefen—*Stufe*

51 TRINITY HOUSE, CORPORATION OF THE, London (Appendix, p. 285)
Lamps of various kinds, supplied by different manufacturers

Lampes diverses fournies par plusieurs fabricants

Lampen verschiedener Art, geliefert von verschiedenen Fabrikanten

Lumi di varie specie forniti da vari fabbricanti

53 *TYERMAN, FREDERICK, 38 Gracechurch-st., London

Standard table lamp, with Tyerman's patent economiser for Argand burners

Lampe modèle, munie d'un appareil économique (brevet Tyerman) pour les brûleurs Argand

Anerkannnte Tischlampe mit Tyerman's patentirtem Ersparer für Argandsche Lampen

Lume da tavola tipo col risparmiatore di Tyerman patentato per i becchi di Argand

54 WARRINER, G., Ventilating Furnace Bar Company, 9 Mincing-lane, London (see Testing House)

Furnace with ash-pit, showing bars

Fourneau avec cendrier et barres visibles

Schachtofen mit Aschenloch, und sichtbarem Stangenrost

Fornace con cinerario, con barre visibili

55 WAVISH BROTHERS, Torpoint, Cornwall (see Testing House)

Lamps for maritime and other purposes

Lampes pour l'usage de la marine, etc.

Lampen für Schiffe und andere Zwecke

Lanterne per usi navali ed altri

56 WELCH, E. J. C., Lancaster-house, Harrow (see Testing House)

Gas carburetted apparatus

Appareil à augmenter le pouvoir éclairant du gaz

Gas-Verkohlungs-Apparat

Apparato per carburare il gas

57 *WILKIE & SOAMES, Thames Soap Works, East Greenwich

Stearaffine candles. Greenwich sperm candles

Bougies de stéaraffine. Bougies de sperm, dites de Greenwich

Stearaffin-Lichter, Greenwicher Wallrath-Lichter

Candele di stearaffina. Candele spermaceti di Greenwich

58 WINFIELD, R. W., & Co., Cambridge-street, Birmingham

Chandeliers and gas fittings

Lustres, becs et accessoires pour l'éclairage au gaz

Armleuchter und Gasausrüstung

Lampade e fornimenti da gas

59 WRAY, G. O., Downing College, Cambridge

Candles and candle holder (see Testing House)
Chandelles et porte-chandelle (voir le Bâtiment des Essais)

Lichter und Lichtknechte (siehe Proberhaus)

Candele e portacandela (vedasi casa degli Esperimenti)

60 YOUNG BROTHERS, 34 Queen-street, Cheap-side, London (see Testing House)

Smoke-preventing fire-places; lamps, gas burners

Grilles de foyer fumivores; lampes, becs à gaz

Rauch verhindernde Feuerherde; Lampen, Gasbrenner

Focolari parafumo; lumi, beccchi da gas

61 YOUNG, JAMES, Bathgate, Edinburgh (see Testing House)

Lamps to burn paraffine oil; paraffine candles

Lampes pour brûler l'huile de paraffine, chandelles de paraffine

Paraffinlampen, Paraffinlichter

Lumi a olio di parafina, candele di parafina

Lee Moor fire bricks, china clay, china stone
Argile de Lee Moor pour la fabrication de la porcelaine, briques réfractaires, kaolin
Feuerfeste Backsteine von Lee Moor, Porcellanthon, Kaolin
Mattoni a prova di fuoco di Lee Moor, argilla da porcellane, caolina

82 MARTINEAU & SMITH, 65 Hill-street, Birmingham
Brass cocks and valves, gun-metal cocks and fittings, bells, &c.
Robinets et soupapes de laiton, robinets de bronze et petite serrurerie, sonnettes, etc.
Messingene Hähne und Ventile, kanonenmetallene Hähne, und andere Waaren, Schellen etc.
Cannelle e valvole d'ottone, cannelle, fornimenti campanelli, ecc.

84 MILLWARD, J. F., 76 New John-street, Birmingham
Awl blades and sewing machine needles
Poinçons d'acier et aiguilles pour les machines à coudre
Ahlen und Nadeln für die Nähmaschine
Lame di lesine, e aghi da macchina da cuire

85 MILWARD, HENRY, & SONS, Washford Mills, Redditch
Needles, fish-hooks, &c.
Aiguilles, hameçons, etc.
Nadeln, Angelhaken etc.
Aghi, ami

85A MITCHELL, JOSEPH, Worsborough Dale, Barnsley
Sample of coal
Spécimen de houille de Barnsley
Kohlenprobe
Campione di carbon fossile di Barnsley

86 MONKBRIDGE IRON COMPANY, Leeds
Cast-steel tyres, locomotive axles, boiler plates, and bar iron
Bandages de roues en acier fondu, essieux de locomotives, tôles pour la fabrication des chaudières, fer en barres
Radschienen aus Gussstahl, Achsen für Locomotiven, Dampfkesselpplatten und Stabeisen
Cerchioni di acciaio fuso, sale da locomotiva, astroni da caldaia, e barre di ferro

87 MOORE, EDWIN, & Co., 54 Upper Marylebone-street, London
Seythe, knife, and scissor sharpeners
Appareil à aiguiser les faux, les couteaux et les ciseaux
Apparate um Sensen, Messer und Scheren zu schärfen
Affilatoi da falci, coltelli e forbici

88 MOORE & MANBY, 3 Billiter-sq., London, and Dudley
Samples of iron
Fers
Eisenproben
Campioni di ferro

89 MORETON, JOHN, & Co., Wolverhampton, Sheffield, and 6 and 7 Sherborne-lane, London
Hardware
Quincaillerie
Eisenwaaren
Chincaglierie

90 MOREWOOD & ROGERS, Stratford, London
Patent rolled tin and Terne plates; galvanised and corrugated iron
Feuilles d'étain, et tôles recouvertes d'un amalgame de plomb et d'étain dites de Terne; fer bruni et galvanisé
Gewalzte Zinn- und Terne-Platten, galvanisirte und wellenförmiges Eisen
Bande cylindrate stagnate, e bande stagnate e piombate dette Terne, cilindrate (patentate), ferro galvanizzato e scanalato

91 MUCKLESTON, REV. E., Haseley Rectory, Warwick
Lead ore; cannel coal; stone
Mineral de plomb; charbon-cannel; pierre
Bleierz; Cannelkohle; Stein
Minerale di piombo, carbone cannel; pietra

92 NEWALL, D. H. and J., Maxwell-street, Dalbeattie
Specimen of granite work
Spécimen de granit ouvré
Proben von Arbeit in Granit
Campioni di lavori in granito

93 NORTH GUNBARROW CLAY COMPANY, 1 East-street, Newton Abbot, Devon
China clay
Argile pour la fabrication de la porcelaine
Kaolin
Argilla per far porcellana

94 NORTH WALES COAL OIL COMPANY, Flintshire
Welsh cannel coal and shales, with their products
Charbon-cannel et schistes du pays de Galles, avec leurs produits
Cannelkohle und Schiefer von Wales und ihre Producte
Carbone cannel e schisti coi loro prodotti

95 PAGE, JOSEPH, 71 Mott-street, Birmingham
Corkscrews, &c.
Tire-bouchons, etc.
Korkzieher etc.
Tiratappi, ecc.

97 PARKES, JOHN I., Smethwick, Birmingham
Cut nails, frying pans, rice-bowls, &c.
Glaus taillés, poêles à frire, bassins pour le riz
Gehauene Nägel, Pfannen, Reistöpfle etc.
Chiodi tagliati, padelle, bacini pel riso, ecc.

- 98 PATENT NUT AND BOLT COMPANY (Limited),**
London Works, near Birmingham
Nuts, bolts, and rivets
Cheilles, boulons, et rivets
Schraubenmütter, Riegel und Niete
Madrevite, chiavarde, chiodi da ribadire
- 99 PATENT PLUMBAGO CRUCIBLE COMPANY,**
Battersea Works, London (Appendix, pp. 124-5)
Plumbago, black lead, and their uses
Plombagine, graphite, et leur produits
Graphit und seine Anwendungen
Piombaggine, grafite, e loro usi
- 100 PERRENS & HARRISON, The Lye Works,**
Stourbridge
Fire clay and fire bricks
Argile et briques réfractaires
Feuerfester Thon und Backsteine
Argilla, e mattoni a prova di fuoco
- 101 PHOENIX PATENT BOLT & NUT COMPANY,**
Glover-street, Birmingham
Patent machine-made bolts and nuts
Boulons et chevilles fabriqués à la mécanique (brevetés)
Patentirte Riegel und Schraubenmütter, mit Maschinerie gemacht
Chiavarde e madrevite fatti a macchina (patentata)
- 102 PIKE, W. & J., Wareham, Dorset**
Dorsetshire clays
Argiles du comté de Dorsetshire
Thone von Dorsetshire
Argille del Dorsetshire
- 103 POTTER, J., South Molton-street, London**
Metal work (see Architectural Court)

Lavori in metallo (vedasi Compartimento d'Architettura)
- 104 PRATT, BROTHERS, & FARMER, Albert**
Works, Graham-street, Birmingham
Needles secured on paper by machinery
Aiguilles fixées sur papier à la mécanique
Nadeln, durch Maschinerie auf Papier befestigt
Aghi fissati su carta a forza meccanica
- 105 PRICE, DR. DAVID S., 26 Great George-street, Westminster**
Various illustrations of the metallurgy of iron and steel
Spécimens divers de la métallurgie du fer et de l'acier
Verschiedene Illustrationen des Stahl- und Eisenhüttenprocesses
Varie illustrazioni della metallurgia del ferro e dello acciaio
- 106 RECKITT & SONS, Hull and London**
Black leads
Graphites
Graphite
Grafiti
- 107 REID, PATRICK SANDEMAN, Percy-chambers, Northumberland-street, Strand, London**
Oils of petroleum, &c.
Huiles de pétrole, etc.
Petroleum etc.
Oli di petrolio, ecc.
- 108 RICH & SON, Farnham-place, Gravel-lane, Southwark, London**
Hardware
Quincaillerie
Eisenwaaren
Chincaqlierie
- 109 SCOTT, WILLIAM, & Co., 5 Jeffrey's-square, London**
Malleable iron castings and sewing machine
Fontes malleables et machine à coudre
Stabeisen, Gusseisen und Nähmaschine
Getti di ferro malleabili, e macchine da cucire
- 110 SHIPMAN, J., & Co., Attercliffe Steel and Wire Works, Sheffield**
Wire and steel
Fils de fer, et acier
Draht und Stahl
Filo di ferro e acciaio
- 111 SINGER, J. W., Frome, Somerset**
Mediaeval metal work for churches
Objets d'ornement pour églises, style moyen âge
Mittelalterliche Metallararbeit für Kirchen
Lavori in metallo per chiese, stile medioevo

Metal work (see Architectural Court and Testing House)
Objets d'ornement en métal (voir la Salle d'Architecture et le Bâtiment des Essais)
Arbeit in Metall (siehe architektonische Abtheilung)
Lavori in metallo (vedasi Compartimento d'Architettura)
- 113 SMITH, FREDERICK, & Co., Caledonia Works, Halifax**
Iron wire
Fils de fer
Eisendraht
Filo di ferro
- 114 SMITH, JOHN WRIGHT, 57 High Cross-street, Leicester**
Self-acting needles
Aiguilles automotrices
Automatische Nadeln
Aghi automatici
- 115 SOPWITH, THOMAS, 103 Victoria-street, Westminster, London (Appendix, p. 126)**
Lead ores, lead
Minerais de plomb, plomb
Bleierze und Blei
Minerale di piombo, piombo

- 116 STANLEY, FREDERICK THOMAS**, Montague-street, Stones End, London
Horse-shoes
Fers à chevaux
Hufeisen
Ferri da cavallo
- 116A STEVENSON, JACQUES, & Co.**, Middlesboro
Minerals from Cleveland district
Minéraux tirés du district de Cleveland
Mineralien von dem Districte von Cleveland
Minerali dal distretto di Cleveland
- 117 STICKLEY, JAMES**, 5 Cross-street, Hatton-garden, London
Precious metals, gold leaf
Métaux précieux, feuilles d'or
Edle Metalle, Blattgold
Metalli preziosi, foglia d'oro
- 118 SUTTON, WILLIAM, & SONS**, 44 New Town-row, Birmingham
Awl blades, needles, &c.
Poinçons d'acier, aiguilles, etc.
Ahlen, Nadeln etc.
Lame da lesine, aghi, ecc.
- 119 TAYLOR BROTHERS & Co.**, Leeds
Tyres, axles, &c.
Bandages de roues, essieux, etc.
Radschienen, Achsen etc.
Cerchioni, sale, ecc.
- 120 TAYLER, D. F., & Co.**, Newhall Works, George-street, Birmingham
Toilet pins, iron and steel wire
Epingles de toilette, fils de fer, fils d'acier
Toilettnadeln, Eisen- und Stahldraht
Spilli da toaletta, fil di ferro e d'acciaio
- 121 TONKS, WILLIAM, & SONS**, Moseley-street, Birmingham
Brass and metal work
Objets divers de laiton, etc.
Messing- und Metallarbeit
Lavori di ottone e di metallo
- 122 TOWNSEND, GEORGE, & Co.**, Hunt End, Redditch
Needles, shuttles, reels, &c., for sewing machines
Aiguilles, navettes, bobines, etc., pour machines à coudre
Nadeln, Schiffchen, Haspeln etc. für Nähmaschinen
Aghi, spolette, rocchetti, ecc., per macchine da cucire
- 124 TUDOR, S. & W.**, Lead Works, Hull, and 17 College-hill, London
White and red lead
Blanc de plomb, céruse
Bleiweiss und Mennige
Piombo rosso e bianco
- 125 TUPPER & Co.**, 61A Moorgate-street, London
Galvanised iron, &c.
Fers galvanisés, etc.
Galvanisirtes Eisen etc.
Ferro galvanizzato, ecc.
- 126 TURTON, THOMAS, & SONS**, Sheaf and Spring Works, Sheffield (Appendix, p. 127)
Steel, files, saws, tools, &c.
Acier, limes, scies, outils, etc.
Stahl, Feilen, Sägen, Werkzeuge etc.
Acciaio, lime, seghe, strumenti, ecc.
- 126A VANE, EARL**, Sunderland
Specimens of coal
Spécimens de charbon
Kohlenproben
Campioni di carbon fossile
- 127 VICKERMAN & Co.**, Tenby (Appendix, p. 128)
Iron—*Fers*
Eisen—*Ferri*
- 127A WALKER, JOSEPH, PARKER, & Co.**, Chester, Liverpool, London, and Newcastle-on-Tyne
White, red, sheet and pig lead; patent shot; pipes, lead ore, &c.
Blanc de plomb, céruse, feuilles de plomb, plomb en saumons; plomb de chasse breveté; tuyaux, minerais de plomb, etc.
Bleiweiss, Bleisuboxyd, Blei in Platten und Sauen; Patentschrot; Röhren, Bleierz, u. s. w.
Biacca, minio, piombo in pane e in lame; palla patentata; tubi, minerale di piombo, ecc.
- 128 WATSON, JOHN, & SONS**, Bathville, Bathgate
Model in Boghead canal, and products by distillation of Boghead cannel
Modèle en charbon-cannel de Boghead, produits de la distillation de ce charbon
Ein Modell in Cannelkohle und Producte der Destillation der Bogheader Cannelkohle
Modello in carbone cannel di Boghead e prodotti della distillazione del Boghead, carbone cannel
- 129 WEBSTER & HORSFALL**, 15 Bromsgrove-street, Birmingham
Patent steel wire
Fils d'acier brevetés
Patentirter Stahldraht
Fil d'acciaio (patentato)
- 130 WEST CUMBERLAND HEMATITE IRON COMPANY (Limited)**, Workington, Cumberland
Pig iron, boiler and other plates
Fers en saumons, tôles pour chaudières, etc.
Roheisen, Dampfkessel- und andere Platten
Ferro in pane, lastroni per caldaie e altro
- 131 WEST OF ENGLAND CHINA STONE AND CLAY COMPANY**, St. Austell
Clay for bleachers, potters, and paper manufacturers; fire bricks and tiles, and architectural bricks
Argile pour blanchisseurs, potiers et fabricants de papier; briques et tuiles réfractaires, briques pour constructions
Thon für Bleicher, Töpfer und Papiermacher; feuerfeste und andere Backsteine und Dachziegel
Argilla per imbiancatori, vasai, e fabbricanti di carta; mattoni e tegole a prova di fuoco, e per architettura

132 WHITEWAY & Co., Kingsteignton, near Newton Abbot, Devon
Tobacco-pipe and potter's clays
Argiles pour la fabrication des pipes et des poteries
Pfeifen- und Töpferthon
Pipe da tabacco, e argille da vasellaio

133 WHITLEY, JOSEPH, & Co., Railway Brass Works, Leeds
Brass steam fittings, castings, &c.
Ajustages, montures, et fontes de laiton, etc.
Messingene Bestandtheile und Gusswaaren für Dampfmaschinen, u. s. w.
Getti e aggiustature di ottone pel vapore, ecc.

134 WIGAN COAL AND IRON COMPANY (Limited), Wigan
Cannel, bituminous coal, pig iron, and model
Charbon-cannel, houille bitumineuse, fers en saumons, et modèle
Cannel- und bituminöse Kohlen, Roheisen und Modell
Carbone cancell, e bituminoso, ferro in pane e modello

134A WINFIELD, R. W., & Co. (see Class 24)
Brassfoundry, brass and copper tubes, wire, &c.
Objets de laiton, tubes, fils, etc., de laiton et de cuivre
Messingwaaren, Messing- und Kupferröhren, Draht, u. s. w.
Oggetti di rame, tubi, fili di rame, d'ottone, ecc.

135 WORTH, SAMUEL LEAKE, 293 Oxford-street, London
Patent knife cleaners, silver and steel polishers, razor strops, &c.
Machines brevetées à nettoyer les couteaux, polissoirs pour l'acier et l'argent, cuirs à repasser les rasoirs, etc.
Patentirte Maschinen zum Messerschärfen zum Poliren von Silber und Stahl, Streichriemen für Rasirmesser etc.
Lustra-coltelli (patentato), brunitore da argento e oro, striscia da rasoio, ecc.

136 YSTALYFERA IRON AND TIN PLATE COMPANY, Swansea
Anthracite coal, pig, bar, and sheet iron, &c., tin plates
Anthracite, fers en saumons, en barres, tôles, feuilles d'étain, etc.
Anthracite, Roh- und Stabeisen, Eisenbleche und Weissbleche
Carbone antracite, ferro in pane, in barra, e in lastrone, ecc., bandoni

137 ZOBEL, JULIUS, 139 Euston-road, London
Hammered metal-work
Objets de métal martelé
Gehämmerte Metallarbeit
Lavoro in metallo martellato

CLASS XLI.

Products of the Cultivation of Forests, and of the Trades appertaining thereto.

Produits des Exploitations et des Industries Forestières.

Producte der Waldcultur und der davon abhängigen Geschäftszweige

Prodotti della Coltura delle Foreste e delle Industrie che ne derivano.

Objets et tissus de caoutchouc, etc.
 Gegenstände aus Caoutchouc etc
Oggetti e tessuti di gomma elastica, ecc.
- 9 BRITISH SEA-WEED COMPANY (Limited), Whitecrook Chemical Works, Dalquair, Glasgow
 Specimens illustrating Stanford's process of treating sea-weeds
Produits extraits des plantes marines (procédé Stanford)
 Proben von Stanford's Process Meergras zu behandeln
Saggi a illustrazione del processo Stanford pel trattamento delle alghe

- 10 BURGOYNE, BURBIDGES, & SQUIRE**, Coleman-street, London
Raw drugs, chemicals, &c.
Matières premières de la chimie et de la pharmacie
Rohe und verarbeitete Chemalien etc.
Droghe naturali, preparati chimici, ecc.
- 11 BUSH, WILLIAM JOHN**, 30 Liverpool-street, London
Essential oils, fruit essences, citrate of magnesia, &c.
Huiles essentielles, essences de fruits, citrate de magnésie, etc.
Etherische Oele, Fruchtesenzen, citronensäure Magnesia etc.
Oli essenziali, essenze di frutti, citrato di magnesia, ecc.
- 12 BUTLER & McCULLOCH**, Covent-garden Market, London
Dried medical herbs, seeds, &c.
Herbes médicinales séchées, graines, etc.
Getrocknete medicinische Kräuter, Samen etc.
Semplici, semi secchi, ecc.
- 13 CALLEY, SAMUEL**, New-road, Brixham, Devon
Specimens of 'Torbay' iron oxide paints, and compositions for ships' metal sheathing, &c.
Couleurs à base d'oxyde de fer de Torbay, et enduits pour la conservation du doublage métallique des navires, etc.
Proben von den Torbay-Eisenoxyd-Farben und Compositionen für metallene Schiffsbleche etc.
Saggi di tinte d'osside de ferro 'Torbay,' e composizioni pel doblaggio metallico delle navi, ecc.
- 14 CALVERT, F. CRACE, & Co.**, Gibbons-street, Bradford, near Manchester
Carbolic acid etc.
Acide carbolique etc.
Carbolsäure etc.
Acido carbolico, ecc.
- 15 CHANCE BROTHERS & Co.** (see Classes 16 and 66)
Chemicals and artificial manures
Produits chimiques, et engrais artificiels
Chemalien und künstliche Dünger
Prodotti chimici, e concimi
- 16 CLARKE, SAMUEL**, 110 Albany-street, Regent's-park, London (Appendix, p. 133)
Patent pyramid night lights and lamps
Bougies-veilleuses pyramidales (brevetées)
Pyramidale Nachlichter und Lampen (Patent)
Lume da notte e bugie a piramide (patentate)
- 17 COLMAN, J. & J.**, 108 Cannon-street, London
Rice starch and starch products
Amidon de riz et produits d'amidon
Reisstärke und Stärke-Producte
Amido di riso e prodotti d'amido
- 18 CONDY BROTHERS & Co.**, 15 Garlick-hill, London
Essential oils, and drugs
Huiles essentielles, et médicaments
Etherische Oele und Arzneiwaaren
Oli essenziali, e droghe
- 19 CONDY, HENRY B.**, Battersea, London
Condy's fluid, or natural disinfectant
Liqueur de Condy, désinfecteur naturel
Condy's Flüssigkeit, oder natürlicher Disinfectirer
Fluido di Condy, o disinfectante naturale
- 20 COOK, EDWARD, & Co.**, East London Soap Works, Bow, London
Soap
Savon
Seife
Sapone
- 21 COOK, W., & Co.**, 84 Sandhill, Newcastle-on-Tyne
Chemicals
Produits chimiques
Chemalien
Preparati chimici
- 22 COW, P. B., HILL & Co.**, 46 and 47 Cheapside, London
Serrated rubber mats, and india-rubber clothing
Nattes en caoutchouc à surface raboteuse, vêtements de caoutchouc
Rauhe Matten von Caoutchouc, und Kleider, von Caoutchouc gemacht
Stoie în goma elastica dentate, abiti di gomma elastica
- 23 CROOKES, W.**, 20 Mornington-road, London
Metallic thallium
Thallium à l'état métallique
Metallisches Thallium
Thallium metallico
- 24 DARNEY, J., & SONS**, Kinghorn, Scotland, and 124 Drury-lane, London
Glues and glue material
Colles-fortes et matières de leur fabrication
Leim und Leimmaterialien
Colle e materiali da colla
- 25 DAVY, YATES, & ROUTLEDGE**, 100 Upper Thames-street, London
Chemical products
Produits chimiques
Chemische Erzeugnisse
Prodotti chimici
- 26 DAY & MARTIN**, 97 High Holborn, London
Blacking
Cirage
Schuhschwärze
Lustro da scarpe
- 27 DEMUTH, LEWIS, & Co.**, Springfield Chemical Works, Oldbury, near Birmingham
Coal-tar products, &c.
Produits extraits du goudron, etc.
Producte aus Kohlentheer etc.
Prodotti di catrame di carbon fossile
- 27A DENTON & JUTSUM**, Bow Common, London
Varnish, colours, oils and grease; raw materials and their products
Vernis, couleurs, huiles et graisses; matières premières et leurs produits
Firniß, Farben, Oele und Fett; Rohmaterialien und ihre Producte
Vernice, colori, oli e grasso; materie greggie e i loro prodotti

- 28 DODGE, G. P., 79 Upper Thames-st., London
India-rubber goods for mechanical purposes
Tampons, courroies, rondelles, etc., de caoutchouc pour les machines
Caoutchouc-Präparate für mechanische Zwecke
Lavori di gomma elastica per usi di meccanica
- 29 ESCHWEGE, HERMANN, Chemical Works, Battersea, London
Pure wood naphtha, and some applications
Naphte pur de bois, et ses usages
Reine Holznaphtha und einige Anwendungen
Nafta pura di legno, e alcune applicazioni
- 30 FIELD, J. C. & J., London (Appendix, p. 134)
Patent self-fitting wax, sperm, paraffine, and stearine candles, &c. (see also Testing House)
Bongies de cire, de sperme, de paraffine et de stéarine s'adaptant elles-mêmes aux chandeliers (brevetés), etc. (voir aussi le Bâtiment des Essais)
Patentirte sich dem Leuchter anpassende
Lichter aus Wachs, Wallrath, Paraffin, Stearin etc.
Candele di cera, spermaceti, parafino, e stearina, se adattanti ai candellieri (patentate)
- 31 FLEET, E., & Co., Walworth, London (Appendix, p. 130)
Artificial mineral waters; chemical constituents of natural springs
Eaux minérales artificielles, sels minéraux de sources naturelles
Künstliche Mineralwasser; chemische Bestandtheile von natürlichen Quellen
Acque minerali artificiali, costituenti chimici delle sorgenti naturali
- 32 FOOT & Co., Battersea, London
Chemical products
Produits chimiques
Chemische Producte
Prodotti chimici
- 33 FORSTER & GREGORY, Lonesome Chemical Works, Streatham Common, London
Chemicals
Produits chimiques
Chemicalien
Preparati chimici
- 34 GAMMIE-MAITLAND, G., Shotover House, Oxfordshire
Native Oxford ochre
Ocre naturelle du comté d'Oxford
Einheimischer Ocher von Oxford
Oera naturale di Oxford
- 35 GARROD & Co., 56 Upper Thames-st., London
Varnishes and gums
Vernis et gommes
Firnisse und Gummis
Vernici e gomme
- 36 GAS PRODUCTS UTILISING COMPANY, 10 Coleman-street, London
Alum and other products from the refuse of gas works
Alun et autres produits tirés des résidus des usines à gaz
Alaun und andere Producte, von Abfälle von Gasanstalten erhalten
Allume e altri prodotti provenienti delle fecce di fabbricche di gas
- 37 GASKELL, DEACON, & Co., Widnes, Lancashire
Solid products of the soda manufacture
Produits solides dérivés de la fabrication de la soude
Feste Producte der Soda-Fabrication
Prodotti solidi della manifattura di soda
- 38 GIBBS, DAVID & WILLIAM, 76 Milton-street, London
Household and manufacturer's soaps
Savons de ménage et pour l'industrie
Seifen für den Haushalt und Fabricanten
Saponi per uso domestico, e dei manifattori
- 39 GOSSAGE, W., & SONS, Widnes, near Warrington
Soaps and silicates used in making soap
Savons et matières siliceuses pour leur fabrication
Seifen und Silicate für Seifensieder
Saponi e silicati, usati nella fabbricazione da saponi
- 40 HAAS, J. R., & Co., Leeds
Refined carmine and soluble indigo
Carmin raffiné et indigo soluble
Raffinirter Carmin und löslicher Indigo
Carminio raffinato e indaco solubile
- 41 HADLAND, A. C., & Co., Dan-y-Graig Works, Swansea
Specimens of arsenic
Spécimens d'arsenic
Arsenikproben
Campione di arsenica
- 42 HARE, J. & Co., Bristol
Painters' and coachmakers' colours
Couleurs à l'usage des peintres et des carrossiers
Farben für Maler und Kutschenmacher
Colori da pittori e carrozzieri
- 44 HODGSON & SIMPSON, Calder Soap Works, Wakefield
Soap—*Savon*
Seife—*Sapone*
- 45 HOLLAND, WILLIAM, Market Deeping
Essential oils, extracts, dried herbs, &c.
Huiles essentielles, extraits, herbes d'esséchées, etc.
Aetherische Oele, Extracte, getrocknete Kräuter etc.
Oli essenziali, estratti, erbe secche
- 46 HOPKIN & WILLIAMS, 5 New Cavendish-street, London
Chemical products
Produits chimiques
Chemische Producte
Prodotti chimici
- 47 HOSEGOOD & Co., St. George's Colour Works, George-yard, Whitechapel
Colours—*Couleurs*
Farben—*Colori*

- 48 HOWARDS & SONS**, Stratford, near London
Salts of quinine and other chemicals
Sels de quinine et autres produits chimiques
Quininsalze und andere Chemicalien
Sali di chinino e altri preparati chimici
- 49 THE HURLET & CAMPSIE ALUM COMPANY**, Glasgow
Crystals of alum and of yellow and red prussiate of potash
Cristaux d'alun et de prussiate de potasse jaune et rouge
Crystalle von Alaun und gelbem und rothem blausaurem Kali
Cristalli di allume, e prussiato di potassa giallo e rosso
- 50 HUSKISSON, W., & SONS**, 77 Swinton-street, Gray's-inn-road, London
Chemical products
Produits chimiques
Chemische Producte
Prodotti chimici
- 51 THE JARROW CHEMICAL COMPANY**, South Shields
Specimens of chemical products
Produits chimiques
Chemische Producte
Saggi di prodotti chimici
- 52 JOHNSON, MATTHEY, & Co.**, Hatton-garden, London (Appendix, p. 135)
Rare chemical and metallurgical products
Produits rares de la chimie et de la métallurgie
Seltene Chemicalien und Hüttenproducte
Prodotti rari chimici e metallurgici
- 53 JOHNSON & SONS**, 18A Basinghall-street, London
Chemicals, chiefly photographic
Produits chimiques, principalement pour la photographie
Chemicalien, besonders photographische
Preparati chimici, specialmente fotografici
- 54 JONES, ORLANDO, & Co.**, York-road, Battersea, London
Starch, &c.
Amidon, etc.
Stärke etc.
Amido, ecc.
- 55 KNIGHT, JOHN, & SONS**, York-place, Old Gravel-lane, London
Primrose soap
Savon parfumé à la primevère
Primrose-Seife (Schlüsselblumen)
Sapone di primavera
- 56 LAMBE & STERRY**, Rotherhithe New-road, London
Refined paraffine wax, &c.
Cire de paraffine raffinée, etc.
Raffinirtes Paraffinwachs etc.
Cera di petrolio raffinata, ecc.
- 56A LANGDALE, E. F.**, 72 Hatton-garden, London
Essential oils, artificial essences, &c.
Huiles essentielles, essences artificielles, etc.
Etherische Oele, künstliche Essenzen etc.
Oli essenziali, essenze artificiali, ecc.
- 57 LANGTON & BICKNELLS**, 89 Newington Butts, London
Spermaceti, oils, &c.
Blanc de baleine, huiles, etc.
Wallrath, Oele etc.
Spermaceti, oli, ecc.
- 58 LE MAOUT, A.**, 57 Princes-street, Leicester-square, London
Jujube capsules containing nauseous drugs
Capsules de jujube pour médicaments
Kapseln für unangenehme Medicin, aus Jujube (der rothen Brustbeere) gemacht
Capsule di giuggioli contenenti medicine nauseanti
- 59 *THE LONDON LAC DYE COMPANY (Limited)**, 65 Charlwood-street, Pimlico, London
Dyes, shell or gum lac, &c.
Teintures, laques en écailles, etc.
Farben, Schellack oder Gumlack etc.
Tinte, gommalacca, ecc.
- 60 LOWE, CHARLES, & Co.**, 14 Fountain-street, Manchester
Carbolic acid and its derivatives, &c.
Acide carbolique et ses dérivés, etc.
Carbolsäure und ihre Ableitungs-Producte etc.
Acido carbolico e suoi derivati, ecc.
- 61 McDougall Brothers**, Manchester and London (Appendix, p. 136)
Disinfectants, sheep dipping composition, chemicals, &c.
Produits désinfectants, composition inoffensive pour immerger les moutons, produits chimiques
Disinfections-Stoffe, Mischung um die Schafe zu waschen, Chemicalien etc.
Disinfettanti, composizione per tuffarvi le pecore, preparazioni chimiche, ecc.
- 62 MACFARLAN, J. F. & C.**, 17 North Bridge, Edinburgh
Chemical products
Produits chimiques
Chemische Producte
Prodotti chimici
- 63 MACKAY, JOHN**, 119 George-street, Edinburgh
Varnishes, polishes, and gum resins
Vernis, enduits, résines
Firnisse, Polituren und Harze
Vernici, pulimenti, e gomme resine
- 64 MANDER BROTHERS**, Wolverhampton
Varnishes, &c.
Vernis, etc.
Firnisse etc.
Vernici, ecc.
- 65 MASON, JOSEPH, & Co.**, 3 Derwent-street, and Burton-road, Derby
Colours and varnishes
Couleurs et vernis
Farben und Firnisse
Colori e vernise

- 66 MAY & BAKER, Garden Wharf, Battersea, London
Chemicals
Produits chimiques
Chemicalien
Preparati chimici
- 67 *MAYALL, T. J., 3 Carey-street, London
India-rubber manufactures
Objets de caoutchouc
Fabricate aus Caoutchouc
Manifatture di gomma elastica
- 68 MORSON, THOMAS, & SON, 31, 33, 124 Southampton-row, and Hornsey-road, London
Chemical products
Produits chimiques
Chemicalien
Prodotti chimici
- 69 MUSPRATT, JAMES, & SONS, 41 Oldhall-street, Liverpool
Chemical products connected with the manufacture of alkali
Produits chimiques ayant rapport à la fabrication de l'alcali
Chemische Producte im Zusammenhang mit der Fabrication der Alkalien
Prodotti chimici relativi alla manifattura degli alkali
- 70 NIMMO, T., & Co., Rivald's Green Works, Linlithgow, Scotland
Glue—*Colle-forte*
Leim—*Colla*
- 71 OGLEBY, CHARLES, & Co., 53 Paradise-street, Lambeth, London
Wax, spermaceti, paraffine, and composite candles, soaps, &c.
Bougies de cire, de blanc de baleine, paraffine, etc.; savons
Lichter aus Wachs, Wallrath, Paraffin etc., Seifen etc.
Candele di cera, spermaceti, paraffino, e composite, saponi, ecc.
- 72 PARKES, ALEXANDER, 435 Coventry-road, Birmingham
Parkesine manufactures
Manufactures Parkesines
Parkesin-Fabricate
Lavori di Parkesina
- 73 PARKINS, THOMAS, Robert Town, near Northampton, Yorkshire
Prussiate of potash
Prussiate de potasse
Blausaures Kali
Prussiato di potassa
- 74 PETMAN, MULLAR, & Co., 13 Queen-street, Southwark-bridge-road, London
Toilet soaps, and soaps for household and manufacturing purposes
Savons de toilette, de ménage, pour le foulage, etc.
Toilettenseife und Seife für den Haushalt und Fabrikzwecke
Saponi da toilette, e saponi per usi domestici e delle manifatture
- 75 *PRICE, ASTLEY PASTON 47 Lincoln's-inn-fields, London
Specimens illustrative of improvements in the production of tartaric acid
Spécimens pour démontrer des améliorations introduites dans la production de l'acide tartarique
Proben um die Verbesserung in der Weinsäure-Fabrication darzuthun
Saggi illustranti perfezionamenti nella produzione dell'acido tartarico
- 76 *PRICE, DR. D. S. (see Class 40)
Preservation of paintings in galleries; sulphurometer
Conservation des tableaux dans les galeries; sulphuromètre
Erhaltung von Gemälden in Gallerien; sulphurometer
Conservazione di quadri in gallerie; sulfurometro
- 77 PRICE'S PATENT CANDLE COMPANY (Limited), Belmont Works, Battersea, London
Candles, night lights, oils, soaps, & glycerine
Chandelles, bougies-veilleuses, huiles, savons et glycérine
Lichter, Nachtlichter, Oele, Seifen und Glycerin
Candele, lumi da notte, oli, saponi, e glicerina
- 78 PULFORD, G. C., 4 Dowgate-hill, Cannon-street, London
Magnetic paints, &c.
Couleurs magnétiques, etc.
Magnetische Farben etc.
Tinte magnétique, ecc.
- 79 RANSOM, WILLIAM (see Class 25)
Pharmaceutical preparations, essential oils, herbs, &c.
Produits pharmaceutiques, huiles essentielles, herbes, etc.
Pharmaceutische Preparate, etherische Oele, Kräuter etc.
Preparati farmaceutici, oli essenziali, erbe, ecc.
- 80 RECKITT, ISAAC, & SONS, 149 Upper Thames-street, London
Starch, &c.—*Amidon, etc.*
Stärke etc.—*Amido, ecc.*
- 81 ROSE, WILLIAM A., 66 Upper Thames-street, London
Railway and other greases, fats, oils
Graisses pour locomotives, corps gras, huiles
Schmierer für Eisenbahnwagen, Fette, Oele
Unti per ferrovie, grasse, oli
- 82 RUMSEY, WILLIAM S., 3 Clapham-rise, London
I. X. L. jewellery tablets, non-mercurial plate powder, polishing paste, &c.
I. X. L. poudre pour nettoyage des bijoux, poudre à nettoyer la vaisselle, sans mercure; pâtes à polir, etc.
I. X. L. Pulver für Juwelen, Pulver für das Reinigen werthvoller Gefässe, (enthält kein Quecksilber), Polirmasse etc.
I. X. L. polvere per ripulimento di gioje, polvere per argenteria, e pasta da lustrare senza mercurio, ecc.

- 83 SAVORY & MOORE** (see Class 11 and App., p. 137)
Pancreatic emulsions; gelatine disks for ophthalmic operations; pharmaceutical preparations
Emulsions pancréatiques; disques de gélatine pour les opérations sur les yeux; préparations pharmaceutiques
Pancreatic Emulsions, Gelatinscheiben für Ophthalmische Operationen; Pharmaceutische Präparate
Emulsioni pancreatiche; dischi in gelatina per operazioni oftalmiche; preparati farmaceutici
- 84 SCHLESINGER, LOUIS**, 13 Liverpool-street, City, London
Essential oils, essences, drugs, &c.
Huiles essentielles, essences, médicaments, etc.
Etherische Oele, Essenzen, Arzneiwaaren etc.
Oli essenziali, essenze, droghe, ecc.
- 85 SCHWEITZER, H., & Co.**, 35A King's-road, London (Appendix, p. 137)
Cocoatina, and cocoa-butter, and its applications
Cocoatina, et beurre de cacao, et ses usages
Cocoatina und Cacaobutter und ihre Anwendungen
Cacaotina, e burro di cacao, e suoi usi
- 86 SCHWEPPE, J., & Co.**, 51 Berners-street, London
Aërated mineral waters
Eaux minérales gazeuses
Mit Gasen impregnirte Mineralwasser
Acque minerali aerate
- 87 *SCOTT, WENTWORTH L.**, F.C.S., F.A.S.L., Analytical Laboratory, Westbourne-park, London
Artificial quinine and other chemicals
Quinine artificielle et autres produits chimiques
Künstliches Quinin und andere Chemicalien
Chinina artificiale e preparati chimici
- 88 THE SHARON CHEMICAL COMPANY**, Derby
Oil of vitriol, sulphate and carbonate of ammonia, &c.
Acide sulfurique, sulfate et carbonate d'ammoniaque, etc.
Schwefelsäure, schwefel- und kohlen-saures Ammoniak etc.
Olio di vitriolo, solfato e carbonato di ammoniaca, ecc.
- 89 SMITH, T. & H., & Co.**, 21 Duke-street, Edinburgh, and 69 Coleman-street, London
Chemicals
Produits chimiques
Chemicalien
Preparati chimici
- 90 SQUIRE, PETER**, 277 Oxford-street, London
Preparations of the British pharmacopœia
Préparations de la pharmacopée britannique
Präparate der Britischen Pharmacopie
Preparati della farmacopea britannica
- 91 STEPHENS, HENRY**, 18 St. Martin's-le-grand, London
Stains for dyeing wood (see also Testing House)
Couleurs pour la teinture du bois (voir aussi les Bâtimens des Essais)
Beizen um Holz zu färben
Tinte per colorir il legno
- 92 SZERELMEY & Co.**, 39A King William-street, London
Compositions for preserving stone, brick, stucco, &c.
Enduits pour la conservation de la pierre, des briques, du stuc, etc.
Mischungen um Steine, Backsteine, Stucco etc. zu preserviren
Composizioni per conservare la pietra, il mattone, lo stucco, ecc.
- 92A Szerelmey, N.C.**, London
Colours—*Couleurs*
Farben—*Colori*
- 93 TALBOT & ALDER**, 127 Fenchurch-street, London
Colours, &c.—*Couleurs, etc.*
Farben etc.—*Colori, ecc.*
- 94 TAYLER, HARRY, & Co.**, 42 St. Paul's Church-yard, London
India-rubber and gutta-percha, raw and manufactured
Caoutchouc et gutta-percha bruts, et leurs produits
Caoutchouc und Gutta-percha, roh und fabricirt
Gomma elastica, e gutta perca grezze e manifatturate
- 95 TAYLOR, WILLIAM, & Co.**, Leith
Composite, stearic, and paraffine candles, products of the distillation of shale
Bougies de stéarine, de paraffine, etc.; produits de la distillation du schiste
Compositions, Stearin- und Paraffin-Lichter, Produkte der Schiefer-Destillation
Candele composite, steariche, e di parafino, prodotti della distillazione dello schisto
- 96 TIDMAN & SON**, 10 Wormwood-street, London, E.C.
'Tidman's sea salt'
Sel marin de Tidman
Tidman'sches Seesalz
Sal marino di 'Tidman'
- 97 *TUCKER, FRANCIS, & Co.**, 18 South Molton-street, London
Wax and church candles
Bougies et cierges
Wachs- und Kirchenlichter
Cera e candele da chiesa
- 98 TURNER, CHARLES, & SON**, 7 Broad-street, Bloomsbury, London
Varnishes, gums, &c.
Vernis, gommes, etc.
Firnisse, Gummis etc.
Vernici, gomme, ecc.

99 TWINBERROW, J., & Co., 53 Broad-street,
Worcester

Aërated and mineral waters

Eaux gazeuses et minérales

Impregnirte Mineralwasser

Acque aerate e minerali

100 TWINBERROW & SON (see Class 11)

Pharmaceutical preparations and cod-liver oil
*Préparations pharmaceutiques et huile de foie
de morue*

Pharmaceutische Preparate und Leberthran

*Preparati farmaceutici e olio di fagato di mer-
luzzo*

101 USHER, RUFUS, Bodicott, near Banbury

English rhubarb and biennial henbane

Rhubarbe anglaise, et jusquiame bisannuelle

Englischer Rhabarber und zweijähriges
Bilsenkraut

Rabarbaro inglese, e giusquiamo bienne

102 WALKER ALKALI COMPANY, Newcastle-
upon-Tyne

Hyposulphite of soda and ammonia, refined
alkali

*Hyposulfite de soude et d'ammoniaque, alcali
raffiné*

Unterschwefligsaures Natron und Ammoniak,
raffinirte Alkalien

*Ipposolfiti di soda e di ammoniaca, alcali
raffinati*

103 WARNE, W., & Co., 9 Gresham-street
West, London

Manufactures of india-rubber

Objets de caoutchouc

Caoutchouc-Fabricate

Manifatture di gomma elastica

104 WILKIE & SOAMES (see Class 24)

Hard candles (see also Testing House)

*Chandelles dures (voir aussi le Bâtiment des
Essais*

Harte Lichter

Candele dure

105 WILKINSON, HEYWOODS, & CLARK, Battle-
bridge, King's-cross, London

Varnishes, colours, &c.

Vernis, couleurs, etc.

Firnisse, Farben etc.

Vernici, colori, ecc.

106 WOOD, THOMAS P., JUN., St. George's
Works, High-street, Chesterfield

Aërated waters, &c.

Eaux gazeuses, etc.

Impregnirte Wasser etc.

Acque aerate, ecc.

107 YOUNG, JAMES, Chemical Works, Bath-
gate, Scotland

Solid paraffine candles, oils, &c.

Bougies de paraffine, huiles, etc.

Feste Paraffinlichter, Oele etc.

Candele di paraffino solido, oli, ecc.

CLASS XLV.

Specimens of the Chemical Processes
for Bleaching, Dyeing, Printing, and
Dressing.

*Spécimens des Procédés Chimiques de
Blanchiment, de Teinture, d'Impres-
sions et d'Apprêts.*

Proben der chemischen Processe, die
sich auf's Bleichen, Färben, Drucken
und Appretiren beziehen.

*Saggi di Processi Chimici per Imbian-
care, Tingere, Stampare e dar l'Ap-
parecchio.*

Peaux d'agneau blanches et teintes, et tapis de foyer de peaux de chèvre d'Angora
Decken von weissen und gefärbten Schaffellen und Häuten der Angoraziege
Pelli di pecora bianche e colorate, e tappetini di capra d'Angora
- 3 BOAK, ALLAN, 51 West Port, Edinburgh
Tanned, curried, and japanned goods, &c.
Peaux tannées, corroyées et vernies, etc.
Gegerbte, zugerichtete und lackirte Waaren etc
Pelli conciate, affaitate, verniciate, ecc.
- 4 CLARK, C. & J., Street, Somerset
Angora and sheepskin rugs
Tapis de foyer de peaux de chèvre d'Angora et de peaux d'agneau
Angora- und Schaffeldecken
Tappetini di pelle d'Angora e di pecora
- 5 COSTA ANDRADE, M. DE, & Co., 61 Wood-street, London
Ostrich feathers—*Plumes d'autruche*
Straussfedern—*Penne di struzzo*
- 6 DEED, JOHN S., & SONS, 451 Oxford-st., London
Morocco, roans, curried leather, enamelled hides, &c.
Maroquins, basanes, cuirs corroyés, peaux émaillées, etc.
Saffian, weissgahre und zugerichtete Leder, lackirte Häute etc.
Marrocchini, bazzane, cuoio affaitato, pelli verniciate
- 7 DIXON, JOHN, Manning-street, Bermondsey, London
Enamelled and japanned leather, &c., tanned by the exhibitor
Cuir émaillés et vernis, etc., tannés par l'exposant
Lackirtes Leder etc., gegerbt von dem Aussteller
Pelli verniciate e lustrate, ecc., conciati dall'espositore
- 8 EVANS, PARKER, SPARKE, & Co., Avonside, and Western Tanneries, Bristol (Appendix, p. 138)
Sole leather for ordinary and army purposes
Cuir pour semelles de chaussures militaires et ordinaires
Sohlenleder für gewöhnliche und Soldaten-Schuhe
Cuoio da suole ordinario e per armata
- 9 FLITCH, J. J., & SON, Leeds
Fancy dyed and dressed leather
Cuir de fantaisie teints et apprêtés
Buntgefärbte und dressirte Leder
Pelli di lusso colorate e preparate
- 10 *GEORGE & PERRETT, 102 Dean-street, Soho-square, London
Morocco and russia leather
Maroquins et cuirs de Russie
Saffian- und Juchtenleder
Marrocchino e vacchetta di Russia

- 11 *JONES, WILLIAM HENRY, & SON, 179 High-street, Borough, London
Enamelled and curried leather, &c.
Peaux émaillées et corroyées, etc.
Lackirtes und Zugeriehtes Leder etc.
Cuoio verniciato e lustrato, ecc.
- 12 McRAE, W. & G., 70 Basinghall-st., London
Buff hides, calf, deer, and chamois skins, gloving leather and gloves, &c.
Peaux de buffle, peaux de veau, de daim, de chamois, peaux mégissées pour la ganterie, gants, etc.
Büffelfelle, Kalb-, Hirsch- und Gemsenfelle, Handschuhleder, Handschuhe etc.
Pelli di buffalo, vitello, cervo, e camoscio, pelli da guanti, e quanti, ecc.
- 13 PUCKRIDGE, F., & NEPHEW, 5 Kingsland-place, Kingsland, London
Goldbeater's skin
Baudruches pour batteur d'or
Goldschlägerhaut
Pellicole da battiloro
- 14 PULLMAN, R. & J., 17 Greek-street, Soho, London
Foreign and English skins, &c.
Peaux anglaises et étrangères, etc.
Fremde und Englische Felle etc.
Pelli inglesi, straniere, ecc.
- 15 TUCKER, HENRY, Clarence-house, Durham-road, Holloway, London
Goldbeater's skin
Baudruches pour batteurs d'or
Goldschlägerhaut
Pellicole da battiloro
- 17 WEBB & SON, Combs Tannery, near Stow-market, Suffolk (Appendix, p. 138)
Leather machine bands, and leather goods
Cuir, courroies de machines, objets de mégisserie
Lederne Maschinenbänder und Lederwaaren
Bande di cuoio da macchina, e cuoiami
- 18 WILSON, WALKER, & Co., Leeds
Fancy leather and glue
Cuir de fantaisie, colle-forte
Gefärbtes Leder und Leim
Cuoiami di lusso e colla
- 19 WINTER & MASTERS, 24 Duke-st., Bloomsbury, London
Skins, hides, &c.
Peaux et cuirs, etc.
Felle, Häute etc.
Pelli, e cuoi, ecc.
- 20 WRIGHT, W. J., 19 Bridge-street, Manchester
Goldbeater's skin
Baudruches pour batteurs d'or
Goldschlägerhaut
Pellicole da battiloro

GROUP VI.

Apparatus and Processes used in the Common Arts.

Instruments et Procédés des Arts Usuels.

Apparate und Verfahren, angewandt in den gewöhnlichen Künsten.

Apparati e Processi adoperati nelle Arti Usuali.

Vice-President of the Jury	}	LORD RICHARD GROSVENOR, M.P.
<i>Vice-President du Jury</i>		
Vice-Präsident des Preisgerichts		
<i>Vice-Presidente dei Giurati</i>		
Associate	}	H. C. E. CHILDERS, Esq., M.P.
<i>Associé</i>		
Zweiter Vice-Präsident

NOTE.—Names marked with an asterisk are those of persons who do not exhibit in this class.

1 BEAUMONT & LOCOCK, Captains, R.E., London
Rock-tunnelling machine

Machine à creuser les roches

Maschine zum Tunnelmachen

Macchina pel traforo delle roccie

2 BICKFORD, SMITH, & Co., Tuckingmill, Cornwall

A case of safety fuses

Fusées de sûreté

Eine Schachtel Sicherheitszündler

Cassa di spolette di sicurezza

3 CARRETT, MARSHALL, & Co., Dewsbury-road, Leeds

Hydraulic coal-cutting machine

Machine hydraulique à abattre la houille

Hydraulische Kohlen-Haumaschine

Macchina idraulica da tagliar carbon fossile

4 *COPELAND, GEORGE ALEXANDER, Ryder-street, Truro

Safety blasting cartridges

Fusées de sûreté pour le tirage des trous de mines

Sicherheits-Sprengpatronen

Cartucce di sicurezza per l'esplosione delle mine

5 DAGLISH, JOHN, Belmont Hall, Durham

Water-gauge for measuring ventilating pressures in mines

Jauge à eau pour indiquer la pression de la ventilation dans les mines

Wassermanometer für die Ventilation der Bergwerke

Staza ad acqua per misurare le pressioni ventilatrici nelle miniere

5A DOULTON & WATTS (see Class 17)

Plumbago crucibles and other fire-standing goods

Creusets de plombagine et autres objets allant au feu

Graphit-Schmelztiegel und andere feuerfeste Waaren

Crogioli di piombaggine ed altri oggetti a prova di fuoco

6 *FOGGIN, WILLIAM, Newcastle-upon-Tyne

Miners' lamps—*Lampes de sûreté*

Lampen für Bergleute—*Lanterne da minatori*

- 7 HYNAM, JOHN, 6 Princes-square, Wilson-street, Finsbury, London
Graphite, plumbago, and clay crucibles
Graphite, creusets de plombagine et d'argile
Schmelztiegel aus Graphit und Thon
Crogioli di grafite, piombaggine, ed argilla
- 8 JONES & LEVICK, Blaina, Newport, Monmouthshire (Appendix, pp. 139-40)
Coal-cutting machine; air-compressing engine
Machine à abattre la houille; machine à comprimer l'air
Kohl-Haumaschine; Luftcompressions-Maschine
Macchina da tagliar carbon fossile, motore comprimente aria
- 9 JULEFF, JOHN, Fore-street, Redruth
Cornish crucibles and black-lead pots
Creusets de Cornouailles, et pots de plombagine
Schmelztiegel von Cornwallis, Töpfe aus Graphit
Crogioli del Cornwall, e pignatte di piombaggine
- 10 McADAM, WILLIAM, 45 Hyde-park-street, Glasgow
Plumbago crucibles
Creusets de plombagine
Schmelztiegel aus Graphit
Crogioli di piombaggine
- 11 MUSEUM OF PRACTICAL GEOLOGY AND ROYAL SCHOOL OF MINES, Jermyn-street, London
A complete model of the apparatus and machinery employed in the Bessemer process of manufacturing steel
Modèle complet de l'appareil servant à la fabrication de l'acier d'après le procédé Bessemer
Ein vollständiges Modell der Apparate und Maschinerie zur Fabrication der Bessemerstahls
Modello completo degli apparati e meccanismi usati nel processo Bessemer pella fabbricazione dell'acciaio
- 12 PATENT PLUMBAGO CRUCIBLE COMPANY, Battersea Works, London (Appendix, p. 124)
Patent plumbago and other crucibles, portable furnaces, scorifiers, muffles, &c.
Creusets de plombagine et autres brevétés fourneaux mobiles, fours, mouffles, etc.
Patentirte Graphit- und andere Schmelztiegel, tragbare Schmelzöfen, Schlacköfen, Muffeln etc.
Crogioli di piombaggine e d'altro, fornaci portatili, forni da scoriazione, muffole, ecc. (patentati)
- 13 *SMAILE, R., & Co., Newcastle-upon-Tyne
Pressed fire-clay and black-lead crucibles
Argile comprimé et creusets de plombagine
Schmelztiegel aus gepresstem feuerfestem Thon und Graphit
Crogioli d'argilla da fuoco compressa, e crogioli di piombaggine
- 13A *STIDDER, J. G., 6 Palace Road, Lambeth, London
Fans for mining and other purposes
Soufflets-ventilateurs pour les mines, etc.
Luftfänge für Bergbau- und andere Zwecke
Soffietti ventilatori per miniere, ecc.

- 14 TURNER, CHARLES, 12 Four-posts-hill, Southampton
Model of ore sifter
Modèle d'une appareil pourta miser les minerais
Modell einer Erzsiebmaschine
Modello di vaglio da minerale

CLASSES XLVIII. and LXXIV.

Agricultural Apparatus and Processes used in the Cultivation of Fields and Forests; Farm Buildings and Agricultural Works.

Matériel et Procédés des Exploitations rurales et forestières; Spécimens d'Exploitations rurales et d'Usines agricoles.

Ackerbaugeräthe und Verfahren, angewandt in der Cultur der Felder und Wälder; landwirthschaftliche Gebäude und Werke.

Apparati e Processi Agrari usati nella Coltivazione dei Campi e delle Foreste; costruzioni Rurali e officine agrarie.

NOTE.—Names marked with an asterisk are those of persons who do not exhibit in this class.

(For Exhibition at Billancourt, see App. p. 143.)

- 1 ALLEN, E. E., 40 Parliament-st., Westminster, London (exhibits also at Billancourt)
Portable steam-engine
Machine à vapeur locomobile

- Mobile Dampfmaschine
Motore a vapore portatile
- 2 AMIES, BARFORD, & Co., Peterborough (exhibit also at Billancourt)
Agricultural implements
Instruments d'agriculture
Ackerbaugeräthe
Utensili agrari
- 3 ASHBY & JEFFERY, Rutland-terrace Iron Works, Stamford (exhibit also at Billancourt) (Appendix, p. 143)
Agricultural machines, steam-engines &c.
Machines d'agriculture, machines à vapeur, etc.
Landwirthschaftliche Maschinen, Dampfmaschinen etc.
Macchine agricole, motori a vapore, ecc.
- 4 AVELING & PORTER, 72 Cannon-street, London (Appendix, p. 186)
Agricultural locomotive steam-engine
Moteur locomobile à l'usage des machines agricoles
Transportirbare Dampfmaschine für den Ackerbau
Locomotiva a vapore agricola
- 5 BALL, W., & SON, High-street, Rothwell, Northamptonshire
Agricultural implements
Instruments d'agriculture
Ackerbaugeräthe
Utensili agrari
- 6 BAMLETT, A. C., Thirsk, Yorkshire
Reaping and mowing machines
Moissonneuses et faucheuses
Ernte- und Mähmaschinen
Macchine da mietere e da falciare
- 7 BARROWS & CARMICHAEL, Banbury (exhibit also at Billancourt)
Agricultural portable steam engine of eight horse power
Moteur locomobile de la force de huit chevaux à l'usage des machines agricoles
Transportirbare Dampfmaschine von acht Pferdekraft für den Ackerbau
Motore a vapore portatile agricola della forza di otto cavalli
- 7A BEENY, E., Junr. (see class 26)
- 8 BENTALL, E. H., Heybridge Works, near Maldon (exhibits also at Billancourt)
Agricultural implements
Instruments d'agriculture
Ackerbaugeräthe
Utensili agrari
- 9 BEVERLEY IRON AND WAGGON COMPANY (Limited), Beverley (Appendix, p. 142)
Patent three-horse reaping machine (at Billancourt)
Moissonneuse brevetée mue par trois chevaux (à Billancourt)
Patentirte Erntemaschinen für drei Pferde (ausgestellt in Billancourt)
Macchina mitritrice a tiro a tre cavalli, patentata (a Billancourt)
- 10 BOYD, J., & Co., 48 Cannon-street, London
Agricultural and horticultural machinery
Instruments et appareils de l'agriculture et de l'horticulture
Machinerie für den Feld- und Gartenbau
Meccanismi agricoli ed orticoli
- 11 BRABY, J., & SON, 42 Newington Causeway, Southwark, London (exhibit also at Billancourt)
Water cart
Appareil d'arrosement
Wagen zum Sprengen
Carro irrigatorio
- 12 BRIGHAM & BICKERTON, Tweed Implementation Works, Berwick-on-Tweed
Patent reaping machine; horse rake (at Billancourt)
Moissonneuse brevetée; rateau à cheval (à Billancourt)
Patentirte Erntemaschine; Pferderechen (ausgestellt zu Billancourt)
Macchina mietitrice (patentata); rastrello a cavalli (a Billancourt)
- 13 BROWN, W., & MAY, C. N., North Wilts Foundry, Devizes
Thrashing machines and steam engines
Machines à battre le blé et machines à vapeur
Dresch- und Dampfmaschinen
Trebbiatoi e motori a vapore
- 14 CARSON & TOONE, Warminster, Wilts
Agricultural and dairy implements
Instruments d'agriculture et ustensiles de la laiterie
Ackerbau- und Milchwirtschaftsgeräthe
Utensili agrari e da cascina
- 15 CLARKE & SON, Brackley, Northamptonshire
Scythes—*Faux*
Sensen—*Falci*
- 16 CLAYTON, SHUTTLEWORTH, & Co., Lincoln (exhibit also at Billancourt) (App. pp. 146–9)
Portable, traction, and fixed steam engines, -thrashing machines, &c.
Machines à vapeur locomobiles, tractoires et fixes, machines à battre le blé, etc.
Transportable und stehende Dampfmaschinen, Dreschmaschinen etc.
Motori a vapore fissi, portatili, e a trazione, trebbiatoi, ecc.
- 17 COLEMAN & MORTON, London-road Iron Works, Chelmsford (exhibit also at Billancourt)
Agricultural implements and machines
Machines et instruments d'agriculture
Ackerbaugeräthe und Maschinen
Utensili e macchine agrarie
- 18 COPPARD, J., & Co., 84 Fleet-street, London
Improved roughing for horse-shoes
Système de ferrer les chevaux à glace
Verbesserte Weise Hufeisen zu schärfen
Perfezionamento nella ferratura a ghiaccio dei cavalli

- 19 DEAN, JOHN, Blenheim Foundry, Woodstock, Oxfordshire (exhibits also at Billancourt)
Patent sheep and feeding troughs
Rateliers-mangeoires à moutons brevetées
Patentirte Schaf- und Futtertröge
Trogoli per le pecore, e per foraggi (patentati)
- 20 DELL, W. R., 72 Mark-lane, London
Wheat-cleaning machines, mill-stones, &c.
(at Billancourt)
Machines pour le nettoyage du blé, meules, etc.
(à Billancourt)
Weitzlureinigungsmaschinen, Mühlsteine etc.
(ausgestellt zu Billancourt)
Macchina per mondar frumento, mole, etc. (a Billancourt)
- 21 FOWLER, J., & Co., 71 Cornhill, London
Steam plough
Charrue à vapeur
Dampfpflug
Aratro a vapore
- 22 FOX, WALKER, & Co., Atlas Iron Works, Bristol
Portable steam engine
Machine à vapeur locomobile
(Transportable) Dampfmaschine
Macchina a vapore portatile
- 23 FREER, JOHN, Rothley, near Loughborough
Dibbling machine
Plantoir
Pflanzmaschine
Foraterra
- 24 GARRETT, RICHARD, & SONS, Leiston Works, near Saxmundham, Suffolk (exhibit also at Billancourt) (Appendix, p. 149)
Agricultural machines, and steam engines
Machines agricoles et machines à vapeur
Ackerbau- und Dampfmaschinen
Macchine agrarie, e motori a vapore
- 25 GOULDING, W. & H. M., Patrick-street, Cork, and Westmoreland-street, Dublin
Manures
Engrais
Dünger
Concimi
- 26 HARTLEY, JOHN, Otley Mills, Leeds, York shire
Corn screen
Machine à cribler le blé
Kornsieb
Vaglio da grano
- 27 HILL & SMITH, Brierly Hill Iron Works, near Dudley
Agricultural implements
Instruments agricoles
Ackerbaugeräthe
Utensili agrari
- 28 HORNSBY, R., & SONS, Grantham
Steam engines, thrashing machines, ploughs, reapers, &c.
Machines à vapeur, machines à battre le blé, charrues, moissonneuses, etc.
Dampf- und Dreschmaschinen, Pflüge, Erntemaschinen etc.
Motori a vapore, trebbiatori, aratri, macchine da mietere, ecc.
- 29 HOWARD, J. & F., Britannia Iron Works, Bedford, and 4 Cheapside, London (exhibit also at Billancourt) (Appendix, pp. 150-3)
Steam ploughs and other agricultural implements
Charrues à vapeur et autres instruments agricoles
Dampfpflüge und andere Geräte des Ackerbaues
Aratri a vapore ed altri utensili agrari
- 30 *HUDSON, ALFRED, Baker's Cross Farm, Cranbrook, Kent
Apparatus for agricultural works relating to hop culture
Appareils agricoles servant à la culture du houblon
Ackerbaugeräthe für die Hopfenpflanzungen
Apparati per lavori agrari relativi alla cultura del luppolo
- 31 JAMES, I., Tivoli Works, Cheltenham
Liquid manure cart, &c. (at Billancourt)
Charrette pour le transport des engrais liquides, etc. (à Billancourt)
Zauchenwagen, etc. (ausgestellt zu Billancourt)
Corri pei concimi liquidi etc. (a Billancourt)
- 32 KEARSLEY, HENRY & GEORGE, North-street, Ripon
Grass-mowing and reaping machines
Faucheuses et moissonneuses
Grasmähe- und Ernte-Maschinen
Macchine da mietere e da falciare
- 33 LONDON MANURE COMPANY, 116 Fenchurch-street, London
Chemical manures
Produits chimiques pour engrais
Chemische Dünger
Concimi chimici
- 34 MARSHALL, SONS, & Co. (Limited), Gainsborough (exhibit also at Billancourt) (Appendix, p. 154)
Portable and fixed engines, thrashing machines, mills, &c.
Machines locomobiles et fixes, machines à battre le blé, système de meules, etc.
Transportable und stehende Dampfmaschinen, Dreschmaschinen, Mühlen etc.
Motori portatili e fissi, trebbiatori, mulini, ecc.
- 35 McLEAN & HOPE, 51 Timber Bush, Leith
Materials and products of Scottish agriculture
Matériel et produits de l'agriculture en Écosse

- Materialien und Producte des Schottischen Feldbaues
Materiali e prodotti di agricoltura scozzese
- 36 *McSHERRY, M., Limerick
 Agricultural boilers
Chaudière pour usages agricoles
 Landwirthschaftliche Kessel
Caldaje per usi agrari
- 38 NICHOLSON, W. N., Trent Iron Works, Newark (exhibits also at Billancourt)
 Hay-making and other agricultural machines
Faneuses et autres machines agricoles
 Maschinen zum Heumachen und für andere Zwecke des Feldbaues
Macchine agrarie per fienatura ed altro
- 39 NOONE & Co., 5, Stratford-place, Hastings
 Sewage manure, and model of works
Poudrette, et modèle d'usine
 Dünger gewonnen von den Cloaken, und Modell der Fabrik
Concimi di cloaca, e modello di officina
- 40 PACKARD, E., & Co., 6 Princes-street, Ipswich (Appendix, p. 155)
 Materials used in the manufacture of artificial manures
Produits employés à la fabrication des engrais artificiels
 Materialien, gebraucht in der künstlichen Düngerfabrication
Materiali usati nella manifattura di concimi artificiali
- 41 PARKES, PALMER, & HODGKINSON, Sutton Works, Birmingham
 Spades, shovels, forks, axes, &c.
Bêches, pelles, fourches, haches, etc.
 Spaten, Schaufeln, Gabeln, Aexte etc.
Vanghe, pale, forconi, accette, ecc.
- 42 PENNEY & Co. (Limited), 16 Broadgate, Lincoln
 Rotary corn separator, winnowing and dressing machine, &c. (at Billancourt)
Appareil rotatif pour l'épuration des grains, machine pour vanner et préparer le blé (à Billancourt)
 Centrifugalmaschine zum Trennen des Kornes, Kornschwingen und Reinigungsapparate etc. (ausgestellt in Billancourt)
Macchina rotatoria per scegliere, ventilare, e mondar il grano ecc. (a Billancourt)
- 43 PICKSLEY, SIMS, & Co. (Limited), Bedford Leigh, Lancashire (exhibit also at Billancourt)
 Agricultural machinery—*Machines agricoles*
 Ackerbaumaschinen—*Meccanismi agricoli*
- 44 RANSOMES & SIMS, Ipswich (exhibit also at Billancourt) (Appendix, pp. 156–163)
 Steam engines, thrashing machines, ploughs, mills, &c.
Machines à vapeur, machines à battre le blé, charrues, moulins, etc.
 Dampf- und Dreschmaschinen, Pflüge, Mühlen
Motori a vapore, trebbiatori, aratri, mulini, ecc.
- 45 THE READING IRON WORKS, Reading (Appendix, pp. 164–5)
 Steam engines and agricultural machinery
Machines à vapeur et instruments d'agriculture
 Dampfmaschinen und Maschinerie für den Feldbau
Motori a vapore, e meccanismi agricoli
- 46 RICHMOND & CHANDLER, Salford, Manchester (Appendix, p. 172)
 Chaff-cutting, corn-crushing machines
Haches-pailles, concasse-grain
 Maschinen zum Spreuschneiden und Kornzerquetschen
Macchine taglia-paglie, e stritolagrani
- 47 ROBEY & Co. (Limited), Canwick-road, Lincoln (exhibit also at Billancourt) (Appendix, pp. 166–9)
 Thrashing machines, steam engines, &c.
Machines à battre le blé, machines à vapeur
 Dresch- und Dampfmaschinen etc.
Trebbiatori, motori a vapore, ecc.
- 48 RUSTON, PROCTOR, & Co., Sheaf Iron Works, Lincoln (exhibit also at Billancourt)
 Thrashing machines, mills, engines, &c.
Machines à battre le blé, moulins, moteurs, etc.
 Dreschmaschinen, Mühlen, Dampfmaschinen
Trebbiatori, molini, motori, ecc.
- 49 SAMUELSON & Co., Britannia Works, Banbury (exhibit also at Billancourt)
 Agricultural implements
Instruments agricoles
 Ackerbaugeräthe
Utensili agricoli
- 50 SHEEN, THOMAS, Buckingham-road, Aylesbury
 Chaff machines, tin shovels, horse hoes, &c.
Haches-pailles, pelles d'étain, hoes à cheval
 Spreuschneide-Maschinen, Zinnschaufeln, Pferdehacken etc.
Macchine taglia-paglie, pale stagnate, zappe
- 51 SMITH, THOMAS, & SONS, Buckingham-road, Herstmonceux, Hurst-green, Sussex
 Truck baskets, sheep-feeding cribs, &c.
Paniers de bois, crèches à moutons, etc.
 Futterkörbe, Krippen für Schafe etc.
Panieri carruole, greppie da pecore, ecc.
- 52 SMITH, WILLIAM, Royal Iron Works, Kettering, Northamptonshire
 Agricultural machines
Machines agricoles
 Ackerbaumaschinen
Macchine agricole
- 53 SMYTH, J., & SONS, Peasenhall, near Yoxford, Suffolk (exhibit also at Billancourt)
 Drills, sowing machines, manure distributors
Semoirs, appareils pour la distribution des engrais
 Rill- und Säemaschinen, Apparate um den Dünger auszubreiten
Seminatori, macchine seminatrici, concimatori

- 54 SWINDELL & Co., Withymoor Works, Dudley
Spades, shovels, draining tools, &c.
Bêches, pelles, instruments de drainage, etc.
Spaten, Schaufeln, Werkzeuge um Entwässerungsgräben zu machen etc.
Vanghe, pale, arnesi per gli scoli, ecc.
- 55 *TASKER, W., & SONS, Waterloo Iron Works, Andover
Portable steam engine, thrashing and dressing machine
Machine à vapeur locomobile, machine à battre et à préparer le blé
Transportable Dampfmaschine, Dresch- und Reinigungsmaschine
Motore a vapore portatile, trebbiatoio e mondatoio
- 56 TAYLOR, FRANCIS, Church-street, Romsey, Hampshire
Model of patent apparatus for collecting and drying human excrement into guano
Modèle d'un appareil breveté pour recueillir les résidus des centres de population et les dessécher pour engrais, etc.
Modell eines patentirten Apparates um menschliche Excremente zu sammeln und in Guano zu verwandeln
Modello e apparato (patentato) per raccogliere e trasformare gli escrementi umani in guano
- 57 THOMSON, R. W., 3 Moray Place, Edinburgh
Portable steam crane, with differential rotary engine
Grue roulante à vapeur, avec machine à vapeur rotatoire différentielle
Mobiler Dampfkrahn, mit sich drehender Differentialmaschine
Gru a vapore portatile con motore rotante differenziale
- 58 TURNER, E. R. & F., St. Peter's Iron Works, Ipswich (Appendix, p. 171)
Agricultural engines, mills, &c.
Machines agricoles, moulins, etc.
Ackerbäummaschinen, Mühlen etc.
Macchine agricole, mulini, ecc.
- 59 UNDERHILL, W. S., Newport, Salop
Thrashing machines, horse-rakes, cultivators
Machines à battre le blé, rateaux mus par des chevaux, instruments aratoires
Dreschmaschinen, Pferdreden, Feldbaugeräthe
Trebbiatoi, rastrelli a cavalli, coltivatori
- 60 WALLIS, HASLAM, & STEEVENS, Basingstoke
Thrashing machines
Machines à battre le blé
Dreschmaschinen
Trebbiatoi
- 61 *WOODBOURNE, J., Park Iron Works, Kingsley, near Alton
Agricultural implements
Instruments d'agriculture
Ackerbaugeräthe
Utensili agrari

- 62 WOODS & COCKSEGE, Stowmarket, Suffolk (Appendix, p. 173)
Agricultural implements
Instruments d'agriculture
Ackerbaugeräthe
Utensili agrari

CLASS XLIX.

Apparatus used in Shooting, Fishing, &c.

Engins et Instruments de la Chasse, de la Pêche et des Cueillettes.

Apparate, gebraucht zur Jagd, zum Fischfang etc.

Apparati usati alla Caccia, Pesca, ecc.

(For detailed classification, see p. xxii.)

(Voir le système de classification, p. xxii.)

(Für detaillirte Classification, siehe Seite xxii.)

NOTE.—Names marked with an asterisk are those of persons who do not exhibit in this class.

- 1 ALDRED, THOMAS, 126 Oxford-street, London

Archery and fishing-tackle

Équipement d'archers et appareils de pêche

Geräthe, gebraucht beim Bogenschiessen und Fischen

Balestreria, e piscatoria

2 BUCHANAN, JAMES, 28 St. Enoch Wynd,
Glasgow
Fish-hooks
Hameçons
Angelhaken
Ami

3 *BUSSEY, G. G., & Co., Dunn's Passage Fac-
tory, 485 New Oxford-street, London
Leather goods for shooting purposes
Équipement de chasse en cuir
Lederwaaren für die Jagd
Cose di cuoio ad uso di caccia

4 COMMISSIONERS OF IRISH FISHERIES, Dublin
Models of fishpasses, fishing apparatus, and
specimens of fish
Modèles de barrages disposés de façon à ce que
le poisson puisse remonter les cours d'eau,
appareils de pêche et spécimens de poissons
Modelle von Fischwehre, Fischgeräth, und
Muster von Fischen
Modelli di apparato per aiutare al pesce di sa-
lire i fiumi, apparato per pescare, campioni di
pesce

5 FARLOW, C., & Co., 191 Strand, London
Fishing rods, hooks, nets, artificial baits
Lignes, hameçons, filets, appâts artificiels
Angelruthen, Angelhaken, Netze, künstliche
Köder
Canne, ami, reti, esca artificiale

6 HOUNSELL, H. E., Pelican Twine Works,
Bridport
Fishing apparatus, prepared by patent pro-
cess for resisting the action of salt water
Appareils de pêche, fabriqués par un procédé
breveté pour résister à l'action de l'eau de
mer
Geräthe zum Fischen gegen die Einwirkung
des Leewassers durch einen patentirten
Process geschützt
Apparati da pesca preparati con processo pa-
tentato per resistere all' azione dell' acqua
salsa

7 PULLINGER, COLIN, Selsey, near Chichester
(Appendix, p. 174)
Traps for vermin
Pièges pour la destruction des animaux nui-
sibles
Fallen für Ungeziefer
Trappole per animali dannosi

8 RYDER, WILLIAM H., 48 Ellis-street, Bir-
mingham
Brass fishing winches, ferrules, &c.
Articles de pêche en laiton
Messingene Angelhaspeln, Beschläge (Ringe)
etc.
Rocchetti e ghiera da canna da pescare, ecc.

9 STUART, J. & W., Musselburgh
Fishing nets
Filets
Fischnetz
Reti

CLASS L.

Apparatus and Processes used in Agri-
cultural Works and in Works for the
Preparation of Food.

Matériel et Procédés des Usines Agricoles
et des Industries Alimentaires.

Geräthe und Verfahren, die entweder
in Agriculturarbeit oder in der
Nahrungsbereitung angewandt wer-
den.

Apparati e Processi usati nelle Officine
Agrarie, e nelle Officine per la Pre-
parazione dei Cibi.

(For detailed classification, see p. xxii.)

1 ADMIRALTY, Whitehall, London (Appendix,
p. 261)

Cooking apparatus, and specimens of some of
the articles of food used in the Royal Navy
Appareil culinaire, et spécimens des aliments
consommés dans la Marine Royale

Bratsofen und Proben einiger Nahrungs-
mittel die in der Flotte verbraucht werden
Apparato culinario e saggi di cibi usati dalla
Marina Reale

- 2 **ATMOSPHERIC CHURN COMPANY (Limited)**
119 New Bond-street, London (exhibit also at Billancourt) (Appendix, p. 175)
Apparatus for making butter
Appareil pour faire le beurre
Apparate um Butter zu machen
Apparato per far butirro
- 3 ***BAKER, JOHN, Wisbeach, Cambridgeshire**
Corn-dressing machines
Machines à préparer le blé
Korn-Reinigungsmaschine
Macchina per mondar il grano
- 4 **BARNETT, S., 23 Forston-street, London**
Mineral water machinery
Appareils pour la fabrication des eaux minérales
Maschinerie zur Mineralwasser-Bereitung
Meccanismi per far acque minerali
- 5 **BAWDEN, PETER, 49 Norland-square, Notting-hill, London (exhibits also at Billancourt) (Appendix, p. 176)**
Model of patent brick-making machine
Modèle de machine brevetée à mouler les briques
Modell einer patentirten Maschine um Backsteine zu machen
Modello di macchina da far mattoni (patentata)
- 6 **BOURNE, STEPHEN, Headstone Drive, Harrow, Middlesex (Appendix, p. 177)**
Cask and vessels fitted with flexible diaphragm, and elastic valves, deodorised by patent process
Fûts et vases garnis d'un diaphragme flexible et de soupapes élastiques, désinfectés par un procédé breveté
Fässer und Gefässe, ausgestattet mit biegsamen Querwänden und elastischen Klappen, geruchlos gemacht durch einen patentirten Process
Botti e vasi muniti di diaframma flessibile, e valvole elastiche rese inodore per mezzo di un processo patentato
- 7 **BRADFORD, T., & Co., 63 Fleet-street, London (Appendix, pp. 178-9)**
Washing and drying machines
Machines à laver et sécher le linge
Wasch- und Trockenmaschinen
Macchine per lavare e asciugare pannilini
- 8 **CANADIAN WASHING MACHINE AND AGRICULTURAL IMPLEMENT COMPANY (Limited), Worcester**
Washing machine
Machine à laver le linge
Waschmaschine
Macchina per lavare
- 9 **CLARKE & DUNHAM, 48 Mark-lane, London**
Millstones and machinery for flour mills
Meules et mécanique de moulins
Mühlsteine, und Maschinerie für Mehlmühlen
Mole e per meccanismi mulini
- 10 **CLAYTON, H., & Co., Atlas Works, Woodfield-road, Harrow-road, London (exhibit also at Billancourt)**
Machines for making bricks, drain pipes, tiles, &c.
Machine à mouler les briques, les tuyaux de drainage, les tuiles, etc.
Maschinen um Backsteine, Wasserleitungsröhren und Ziegel etc. zu machen
Macchine per far mattoni, condotture, tegole
- 11 **COLLIER, LUKE, Wellington Works, River-street, Rochdale**
Confectioner's machines
Machines à l'usage des confiseurs
Maschinen für Zuckerbäcker
Macchine da confettieri
- 12 **CRESSY, T. S., Burton-on-Trent**
Patent barrel
Baril breveté
Patentirtes Fass
Barile patentato
- 13 ***DUFFIELD, JAMES, 2A Dean-street, Oxford-street, London**
Butter prints, moulds, bread plates, and dairy utensils
Estampes et moules à beurre, plateaux pour le pain, et ustensiles de la laiterie
Butterstempel und Formen, Brotteller und Milchwirtschafts-Utensilien
Stampi per burro, forme, teglie, e utensili per cascina
- 14 **FARROW & JACKSON, 18 Great Tower-street, London**
Iron wine bins, bar fittings, &c.
Caves de fer pour le vin en bouteilles, ustensiles de comptoir, etc.
Eiserne Weinkasten, Geräthe für die Schenkstube etc.
Compartimenti in ferro per vini, fornimenti per banco di birreria, ecc.
- 15 **FERRYMAN, REV. E. A., Privett Parsonage, Alton**
Churns
Barattes
Butterfässer
Zangole
- 16 **FLEET & Co., 159 East Street, Walworth, London (Appendix, p. 177)**
Patent steam soda-water machine, with bottling apparatus
Appareil à vapeur breveté pour fabriquer l'eau de Seltz, avec machine à boucher les bouteilles
Patentirte Dampfmaschine um Sodawasser zu machen und Apparat es auf Flaschen zu ziehen
Macchina a vapore patentato per far acqua di soda con apparato per imbottigliare
- 17 **JOLLY, R., 137 Cheapside, London**
Refrigerators
Glacières artificielles
Refrigeratoren
Sorbettiere

- 18 KEITH, GEORGE, 55 Great Russell-street**
 Bloomsbury, London
 Patent ice-safes, freezing powders, &c.
Appareils brevétés pour conserver la glace, poudres pour la production artificielle de la glace
 Patentirte Eisbehälter, Gefrierpulver
Refrigeratori patentati, polveri congelanti
- 19 KENT, GEORGE, 199 High Holborn, London** (Appendix, pp. 180-1)
 Knife-cleaning machines and articles of domestic utility; compound action mixing machine for confectioners and manufacturers
Machines à nettoyer les couteaux et objets d'utilité domestique; machine à mouvement composé pour mélanger, à l'usage des pâtisseries et des fabricants
 Messer-Reinigungsmaschinen und Artikel von häuslicher Nützlichkeit; Mischmaschine mit zusammengesetzter Bewegung für Zuckerbäcker und Fabricanten
Macchine per pulire coltelli ed altri oggetti d'uso domestico; macchina a movimento composto per mescolare all'uso dei confettieri e fabbricanti
- 20 *LUCAS, J., & Co., 27 Leman-street, White-chapel, London**
 Corn mills, flour-dressing machines, &c.
Moulins, machines à préparer la farine, etc.
 Kormmühlen, Mehlsiebmaschinen etc.
Mulini, buratti, ecc.
- 21 LYON, A., 32 Windmill-street, Finsbury London**
 Mincing and sausage-making machines, &c.
Machines pour hacher les viandes, et pour la fabrication des saucissons, etc.
 Maschinen zum Stampf- und Würstmaschinen etc.
Macchine per sminuzzare e far salsiccie, ecc.
- 21A MATCHWICK, WILLIAM, South Kensington Museum, London**
 Improved cheap filter
Filtre perfectionné à bon marché
 Verbesserte billige Filtrirmaschine
Filtro perfezionato a buon mercato
- 22 *MUNRO, WILLIAM, 3 High-street, Inverness, N.B.**
 Model houses for agricultural purposes, patent churn, &c.
Types d'habitation rurales, baratte brevetée, etc.
 Musterhäuser für Agriculturzwecke, patentirtes Butterfass etc.
Casa modello per usi agrari, zangole patentate
- 23 PONTIFEX, H., & SONS, Albion Works, York-road, King's-cross, London**
 Brewing and distilling apparatus
Appareil de brasserie et de distillerie
 Apparate zum Bierbrauen und Destilliren
Apparati per far birra e distillare
- 24 *RICHARDSON, I., 81 Brompton-road, London**
 Model of dough kneading machine
Modèle de pétrin mécanique
 Knetenmaschine
Modello di madia meccanica
- 25 RICHES & WATTS, Duke's Palace Iron Works, Norwich** (exhibit also at Billancourt)
 Patent grist mills
Moulins à blé brevétés
 Patentirte Kornmühle
Mulini da cereali patentati
- 26 ROBINSON, WILLIAM, Bridgewater**
 Machine for cleaning the inside of casks
Machine à nettoyer l'intérieur des barils
 Maschine um das Innere von Fässern zu reinigen
Macchina per pulire l'interno delle botti
- 27 SILICATED CARBON FILTER COMPANY, Church-road, Battersea, London**
 Filters, water-purifiers, &c.
Filtres, appareils de filtrage, etc.
 Filter, Wasserreiniger etc.
Filtri, depuratori dell'acqua, ecc.
- 28 SPENCER, THOMAS, 32 Euston-square, London**
 Vessels for magnetic purification of water, and models of a new mode of filtration
Vases pour la purification de l'eau au moyen de l'électricité; modèles d'un nouveau système de filtrage
 Gefässe für die magnetische Reinigung des Wassers, und Modelle einer neuen Filtrirmethode
Vasi per la purificazione magnetica dell'acqua, e modelli per un nuovo modo di filtrazione
- 29 SUMMERSCALES, W., & SONS, Coney-lane Mills, Keighley, Yorkshire**
 Washing, wringing, and mangling machines
Machines à laver, à tordre et à calandrer le linge
 Maschinen zum Waschen, Ausringen und Mangen
Macchine per lavare, spremere e manganare
- 30 TAYLOR, JOHN, 55 New Bridge-street, Manchester**
 Churns and washing machines
Barattes et machines à laver
 Butterfässer und Waschmaschinen
Zangole e macchine a lavare
- 31 TYE, JOHN, St. Mark's Iron Works, Lincoln**
 Machinery for flour mills
Appareils pour minoteries
 Apparate für Mehlmühlen
Meccanismi per mulini
- 32 WENHAM LAKE ICE COMPANY, 140 Strand, London**
 Refrigerators, or portable ice-safes
Appareils réfrigérants mobiles pour la conservation de la glace
 Refrigeratoren oder tragbare Eiskasten
Refrigeratori, ghiacciaie portatili
- 33 WHITE, D.B., M.D., Newcastle-upon-Tyne**
 Apparatus for preserving light wines, &c.
Appareil pour la conservation des vins légers
 Apparate um leichte Weine zu conserviren
Apparato per conservare i vini leggeri, ecc.

34 WHITEHEAD, JOHN, Albert Works, Preston
Drain pipe and brickmaking machinery
Machines à mouler les tuyaux de drainage et les briques

Maschinerie um Wasserleitungsröhren und Backsteine zu machen
Meccanismi per far condotture e mattoni

35 WHITMEE, J., & Co., 70 St. John's-street, Clerkenwell, London

Corn and flour mills, Tice's gas regulators and ventilating incubators

Moulins à blé, régulateurs à gaz de Tice, et couveuses artificielles à ventilateur

Korn und Mehlmühlen, Tice's Gasregulatoren und Incubatoren-Ventilator

Mulini da grano e farina, regolatori del gas di Tice e covatori ventilatori

36 WILLIAMSON, W., 133 High Holborn, London

Scouring, washing, calendering machines, &c.
Machines à essanger, à laver, à calandrer, etc.

Scheuer-, Wasch- und Plättmaschinen etc.

Macchine per ismacchiare, lavare, calendrare, ecc.

CLASS LI.

Apparatus used in Chemistry, Pharmacy, and in Tan-yards.

Matériel des Arts Chimiques, de la Pharmacie, de la Tannerie.

Apparate, die in der Chemie, Pharmacie und beim Gerben gebraucht werden.

Apparati usati nella Chimica, Farmacia, e nella Concia.

(For detailed classification, see p. xxii.)

1 *BAKER, WILLIAM J., Westgate, Wakefield
Improved gas apparatus, adapted to Bowditch's patent

Appareil perfectionné des usines à gaz (procédé breveté de Bowditch)

Verbesserter Gasapparat, anwendbar für Bowditch's Patent

Apparato da gas perfezionato adattato a quello patentato di Bowditch

2 BIRD, PETER HINCKES, 1 Norfolk-square, London

Gas carburettor

Appareil à carburer le gaz

Gas-Carburettor

Apparato usato nella fabbricazione del gas

- 3 BOWER, GEORGE, St. Neots, Huntingdonshire
Drawings of, and apparatus used in, the manufacture and distribution of gas
Appareils pour la production et la distribution, du gaz; dessins d'appareils à gaz
Apparate, die in der Fabrication und Vertheilung von Gas gebraucht werden, und Zeichnungen davon
Apparati, e disegni relativi, usati nella fabbricazione e distribuzione del gas
- 4 CARR, THOMAS, Richmond-road, Montpelier, Bristol
Carr's patent disintegrator
Machine brevetée à broyer et pulvériser les produits minéraux
Carr's patentirter Disintegrator
Stritolatore patentato di Carr
- 4A CLIFF, J., & SON (see Class 65.)
Fire-clay retorts
Cornues d'argile réfractaire
Retorten von feuerfestem Thon
Storte d'argilla a prova di fuoco
- 5 HUXHAMS & BROWN, Commercial-road, Exeter
Machines used in tan-yards; bark mills
Matériel des ateliers de tannerie; machines pour la préparation des matières tannantes
Maschinen, die in der Lohgerberei gebraucht werden; Lohmühlen
Macchine usate nelle concie, mulini per la scorza tannina
- 6 JOHNSON, MATTHEY, & Co. (see Class 40)
Platinum apparatus
Appareil de platine
Platina-Apparat
Apparato di platina
- 7 PORTER, J. T. B., & Co., Gowts Bridge Works, Lincoln (Appendix, p. 182)
Working model of apparatus for producing gas from coal, oil, tallow, and other substances
Modèle en mouvement d'un appareil pour l'extraction du gaz de la houille, des huiles, des corps gras, etc.
Arbeitendes Modell eines Apparates, um Gas von Kohlen, Oel, Talg und anderen Substanzen zu machen
Modello operativo di un apparato per produr gas dal carbone, l'olio, il sevo, ed altre sostanze
- 8 STOTHERT & PITT, Newark Foundry, Bath
Machines for rolling and tanning leather
Machines à comprimer et à tanner les cuirs
Maschinen zum Pressen und Gerben des Leders
Macchine per comprimere e conciare il cuoio
- 9 TYLER, JOHN H., 18 Abbey-street, Bermondsey, London (Appendix, p. 182)
Apparatus used in tan-yards
Matériel des ateliers de tannerie
Apparate, die in der Lohgerberei gebraucht werden
Apparato usato nelle concie

- 10 WILSON, JAMES, 2 Royal Exchange-buildings, London
Hydraulic centre valve for working gas purifiers
Appareil de soupapes hydrauliques pour l'épuration des gaz
Hydraulisches Centralventil für Gasreinigungs-Apparate
Valvola centrale idraulica per i purificatori del gas in azione

CLASS LII.

- Prime-Movers, Boilers, Engines, &c. specially adapted to the requirements of the Exhibition (Appendix, p. 183)
Moteurs, Générateurs et Appareils mécaniques spécialement adaptés aux besoins de l'Exposition.
Hauptbewegungskräfte, Dampfkessel, Dampfmaschinen etc., besonders geeignet für die Bedürfnisse der Ausstellung.
Motori, Caldaie, Macchine, ecc., specialmente adattati ai bisogni dell'Esposizione

- 1 APPLEBY BROTHERS, Emerson-street, Southwark, London (Appendix, p. 191)
Six-ton steam crane, turns, travels, and alters radius by steam or hand; donkey-engine or steam feed-pump; self-acting skip for minerals, ballast, &c.
Grue à vapeur, force 6,000 kilos; elle oriente marche et lève ou baisse la flèche, à vapeur ou à la main; pompe alimentaire à vapeur; sauteuse automatique pour minéraux, etc.
Dampfkrahn, um 120 Centner zu heben, mit Drehung, Hin- und Herbewegung und Radiusveränderung mittelst Dampf- oder Handarbeit; Dampfpumpe; Förderkasten mit selbstthätiger Bodenklappe
Gru a vapore da sei tonnellate, che svolge, cammina e si allunga o si scorcia a vapore od a mano; pompa alimentare a vapore; secchia automatica per alzar minerali ed altri
- 2 AVELING & PORTER, 72 Cannon-street, London (Appendix, p. 186)
Road locomotive
Locomotive pour les chemins ordinaires
Strassenlocomotive
Locomotive stradali
- 4 *BOWSER & CAMERON, Springfield Iron Works, Glasgow
Crane
Grue
Krahn
Gru
- 5 BROWN, WILSON, & Co., 80 Cannon-street, London (Appendix, p. 306)
Donkey steam pump
Machine d'alimentation à vapeur
Dampfpumpe
Pompa a vapore detta 'donkey'
- 6 CARRETT, MARSHALL, & Co., Sun Foundry, Leeds
Steam pump
Pompe à vapeur
Dampfpumpe
Pompa a vapore
- 7 CROGGON & Co., Glasgow, Liverpool, & 34 Bread-street, London
Dry-hair and inodorous felt
Feutre de poil séché, inodore
Trockenes Haar und geruchloser Filz
Feltro, pelo asciutto, ed inodoro
- 8 DONKIN, B., & Co. (see Class 53, and Appendix, p. 187)
Steam pipes, shafting, universal couplings, pulleys, &c.
Conduites de vapeur, arbres de couche, accouplements universels, poulies, etc.
Dampfrohren, Schafte, allgemeine Verbindungen, Rollen etc.
Condotti di vapore, assi, accoppiamenti universali, pulegge, ecc.
- 9 DIXON & HARRIS, London
Welsh coal used under the boilers
Houille du Pays de Galles pour la génération de la vapeur
Walliser Kohle für Dampfkessel
Carbon fossile del paese di Galles da vapore
- 10 FOWLER & Co., Leeds
Traction Engine
Machine à traîner sur les routes ordinaires
Zugmaschine für gemeine Landstrassen
Locomotiva stradale
- 11 FOX, WALKER, & Co., Bristol
Horizontal steam engine
Machine à vapeur horizontale
Horizontale Dampfmaschine
Motore a vapore orizzontale
- 12 GALLOWAY, W. & J., & SONS, Knott Mill Iron Works, Manchester (Appendix, p. 190)
Steam engine and boilers
Machine à vapeur et chaudières
Dampfmaschine und Kessel
Motore a vapore e caldaie
- 13 GREEN, E., & SONS, Wakefield
Fuel economiser
Appareil à économiser le combustible
Apparat um Brennmaterial zu sparen
Risparmia-combustibile
- 14 HART, DAVID, 244 Whitechapel-road, London
Patent improved weighing machine, without loose weights
Pont à bascule breveté, sans poids détachés
Patentirte verbesserte Wage, ohne abgesonderte Gewichte
Macchina per pesare, perfezionata, senza pesi sciolti (patentata)
- 15 HEBURN, I. & T., & SONS, Southwark, London
Driving belts
Courroies de machines
Treibriemen
Bande comunicanti moto
- 17 HICK, HARGREAVES, & Co., Soho Iron Works, Bolton
Steam engine, &c.
Machine à vapeur, etc.
Dampfmaschine etc.
Macchina a vapore, ecc.
- 18 HOWARD, J. & F., Britannia Iron Works, Bedford, & 4 Cheapside, London (App. p. 152)
Patent safety boiler
Chaudière de sûreté, brevetée
Patentirter Sicherheitsdampfkessel
Caldaia di sicurezza (patentata)
- 19 INDIA RUBBER, GUTTA PERCHA, & TELEGRAPH WORKS COMPANY (Limited)
Driving belts
Courroies de machines
Treibriemen
Bande comunicanti moto

- 20 NORTH BRITISH RUBBER COMPANY** (Limited), 4 Cannon-st., Lond. (App. pp. 188-9)
Driving belts, and washers
Courroies de machines, et rondelles
Treibriemen und ringförmige Scheiben zum Dampfabschluss etc.
Bande comunicanti moto e cercini
- 21 PORTER, C. T.**, care of the Whitworth Co. (Limited), Manchester (App. pp. 204-6)
Steam engines and governor
Machine à vapeur, et régulateur
Dampfmaschinen und Regulatoren
Macchine a vapore e regolatore
- 22 RANSOMES & SIMS**, Ipswich (Appendix, pp. 156-163)
Improved portable steam engines, with apparatus for economising fuel
Machines à vapeur locomobiles perfectionnées avec appareil pour économiser le combustible
Verbesserte locomobile Dampfmaschinen, mit Apparat Brennmaterial zu sparen
Macchine a vapore portatili perfezionate, con apparato per risparmiare combustibile
- 23 RUSSELL, G., & Co.**, 7 Exchange-place, Glasgow
Portable steam crane
Grue roulante à vapeur
Tragbarer Dampfkrahn
Gru a vapore portatile
- 24 RUSTON, PROCTOR, & Co.**, Locomotive Works, Lincoln
Locomotive
Locomotive
Locomotive
Locomotiva
- 25 SHANKS, A., & SON** 27 Leadenhall-street, London (exhibit also at Billancourt)
Steam travelling crane
Grue roulante à vapeur
Dampfkrahn mit Locomotion
Gru loco-mobile a vapore
- 26 SHARP, STEWART, & Co. (Limited)**, Atlas Works, Manchester
Injectors
Injecteurs 'Giffard'
Injectoren
Iniettori
- 27 SPENCE'S PATENT COMPOSITION COMPANY**, 19 Buckingham Street, Strand, London
Non-conducting covering for steam boilers, pipes, &c.
Ciment non-conducteur pour couvrir les chaudières, les tuyaux, etc.
Nicht leitender Cement zum Bekleiden von Dampfkesseln, Röhren u.s.w.
Copertura non conducente per coprire i tubi del vapore, ecc.
- 28 STOTHERT & PITT**, Newark Foundry, Bath
Steam travelling crane
Grue roulante à vapeur
Dampfkrahn mit Locomotion
Gru loco-mobile a vapore
- 30 TANGYE BROTHERS**, Clement-street, Birmingham (Appendix, pp. 192-3)
Lifting jacks, pulley blocks, &c.
Cric à soulever les fardeaux, poulies, mofles
Winden, Flaschenzüge etc.
Arganelli per sollevare gravi, bozzelli da pulezze, ecc.
- 31 TANNED LEATHER COMPANY**, Armit Works, Greenfield, near Manchester
Leather driving belts
Courroies de machines
Treibriemen
Bande comunicanti moto
- 32 TAYLOR, JAMES, & SONS**, Britannia Works, Birkenhead (see Class 66).
Locomotive steam crane
Grue à vapeur locomobile
Dampfkrahn mit Locomotion
Gru loco-mobile a vapore
- 33 TYLER, HAYWARD, & Co.**, 84 and 85 Whitecross-street, St. Luke's, London
High-pressure boiler
Chaudière à haute pression
Hochdruck-Dampfkessel
Caldia a vapore di alta pressione
- 34 WHITE, JOSEPH**, London
Lubricators
Appareils de graissage
Schmierapparat
Apparati per lubrificare
- 35 WHITWORTH COMPANY** (Limited), Manchester (Appendix, pp. 204-6)
Steam engines
Machines à vapeur
Dampfmaschinen
Macchine a vapore

CLASS LIII.

Machines and Apparatus in general.
Machines et Appareils de la Mécanique Générale.
 Maschinen und Apparate im allgemeinen.
Macchine e Apparat in Generale.

(For detailed classification, see p. xxii.)
 (Voir le système de classification, p. xxii.)
 (Für detaillirte Classification, siehe Seite xxii.)

John Anderson, Esq.

NOTE.—Names marked with an asterisk are those of persons who do not exhibit in this class.

- 1 *ARTINGTON, JOSEPH, Huddersfield
 Magnetizing machine
Machine à aimanter
 Magnetische Maschine
Macchina per calamitare
- 2 *BAILLY, DURAND, MESNARD, & POIRIER, 4
 Agar-street, Strand, London
 Ordnance wheel, turn-table, railway axle-box,
 as illustrations of patent rolling friction
Roue d'affût, plaque tournante, boîte à graisse
pour les voitures de chemin de fer, présentées
comme exemples d'un système breveté de frot-
tement
 Rad für Geschütze, Drehscheibe, Eisenbahn-
 Achsenbüchse, als Illustrationen der patent-
 tirten rollenden Reibung
Ruota d'ordinanza, piattaforma rotante,
mozzo di ruota ferroviaria ad illustrare la
frizione rotante patentata

- 3 BAINES, W. N., Lancefield Brass Foundry,
 Glasgow
 Brass fittings for steam engines and boilers
Pièces détachées en laiton, de machines à vapeur
et de chaudières
 Messingwaaren für Dampfmaschinen und
 Dampfkessel
Fornimenti d'ottone per motori a vapore e
caldaie
- 3A BARCLAY, ANDREW, Caledonian Foundry,
 Kilmarnock, N.B.
 Injector
Injecteur
 Injector
Iniettatore
- 4 BASTIER, JEAN U., 17 Gracechurch-street,
 London
 Patent chain-pump
Noria brevetée
 Patentirte Kettenpumpe
Pompa a catena patentata
- 5 BERNAYS, JOSEPH, 18 Woburn-place, Russell-
 square, London
 Improved patent centrifugal pumps
Pompes à force centrifuge perfectionnées et
brevetées
 Verbesserte patentirte Centrifugal-Pumpen
Pompe centrifughe perfezionate (patentate)
- 6 BOULTON, S. B., 39A King William-street,
 City, London, and 54 Rue Caumartin, Paris
 (Appendix, p. 195)
 Improved apparatus for timber preserving
 purposes
Appareil perfectionné pour la conservation du
bois
 Verbesserter Apparat zur Conservirung von
 Holz
Apparato perfezionato per uso della conserva-
zione del legname
- 7 *BROWN, BENJAMIN, 43 Oakley-street, Lam-
 beth, London
 Spring lever oil feeder
Appareil de graissage avec levier à ressort
 Schmierapparat mit Feder
Apparato per lubrificare con lieva a molla
- 8 CARRETT, MARSHALL, & Co. (see Class 47)
 High and low pressure condensing engine;
 hydraulic reciprocating and rotative power
 engine
Moteur à condensation à haute et à basse pres-
sion; moteur hydraulique avec mouvements de
va-et-vient, et rotatoire
 Hoch- und Niederdruck-Condensations-Ma-
 schine; abwechselnde und drehende Wasser-
 maschine
Motore a condensazione di alta e bassa pres-
sione; motore idraulico a movimenti scam-
bievoli e rotatori
- 8A DAGLISH, J. (see Class 47)
 Water-gauge—Jauge à eau
 Wassermesser—Indicatore d'acqua

- 9 DEFRIES, NATHAN**, Diana-place, Euston-road, London
Dry gas meters with rotary and slide valves
Compteurs à gaz sans eau, avec soupapes tournantes et à coulisse
Gasmesser ohne Wasser mit rotirenden und Schiebventilen
Misuratori di gas a secco con valvole rotatorie e a diaframma
- 10 DE LA BARRE, A.**, 54 Curzon-street, Mayfair, London
Steam plate press, &c.
Presse des plaques à vapeur
Dampfplattenstreckwerk
Soppressa di lastre a vapore
- 10A DENISON**
Weighing blocks, &c.
Bascules, etc.
Wagebalken etc.
Bilancioni, ecc.
- 11 DEWRANCE, J., & Co.**, 176 Great Dover-street, Borough, London
Pressure and vacuum gauges, steam fittings, &c.
Manomètres, et jauges du vide, pièces détachées de machines à vapeur, etc.
Manometer für Druck und Vacuum, Theile von Dampfmaschinen etc.
Staze di pressione, e di vacuo, fornimenti per vapore, ecc.
- 12 DONKIN, B., & Co.**, Bermondsey, London (Appendix, p. 185)
Steam engine (patent horizontal)
Machine à vapeur horizontale, brevetée
Dampfmaschine (patentirte horizontale)
Motore a vapore orizzontale patentato
- 13 EADES, W., & SON**, Lichfield-street, Birmingham
Patent pulley blocks, engineer's tools, &c.
Poulies mouflées brevetées, outils, etc.
Patentirter Flaschenzug, Werkzeuge für Maschinenbaner etc.
Bozzelli patentati, arnesi da ingegnere, ecc.
- 13A ELECTRO-MAGNETIC & ELECTRO-PLATE COMPANY (Limited)**, 17 Bath-street, Birmingham
Electro-motive engine
Moteur électro-magnétique
Maschine, durch Electricität getrieben
Motore electro-magnetico
- 14 GAS METER COMPANY**, 238 Kingsland-road, London
Consumers, gas and water meters, &c.
Compteurs à gaz et à eau, etc.
Consumer, Gas- und Wassermesser etc.
Misuratori di gas e da acqua per consumatori, ecc.
- 15 GLOVER, G., & Co.**, Ranelagh Works, Ranelagh-road, London
National standard gasometers, and patent dry gas meters
Gazomètres nationaux modèles, compteurs à gaz sans eau (brevetés)
- Nationale Original-Gasometer, und patentirte Gasmesser ohne Wasser
Gasometri nazionali tipo, e misuratori di gas a secco patentati
- 16 GLOVER, THOMAS**, Clerkenwell-green, London
Dry gas meters, gas holders, &c.
Compteurs à gaz sans eau, réservoirs de gaz
Gasmesser ohne Wasser, Gasbehälter etc.
Misuratori di gas a secco, serbatoi di gas, ecc.
- 17 GREEN, E., & SONS** (see Class 52)
Fuel economiser for steam boilers (see Agricultural shed)
Appareil de machine à vapeur pour économiser le combustible (voir le Bâtiment d'Agriculture)
Apparat für Dampfkessel, um Brennmaterial zu sparen
Risparmia-combustibile per caldaie a vapore
- 18 GWYNNE & Co.**, Essex-street Works, Strand, London
Portable and fixed engines, turbines, pumps
Machines locomobiles et fixes, turbines, pompes
Transportirbare und stehende Dampfmaschinen, Turbinen, Pumpen
Motori portatili e fissi, turbine, pompe
- 19 HILL, J. C., & Co.**, Oakfields Works, Newport
Rotary steam engines
Machine à vapeur rotatoire
Rotations-Dampfmaschinen
Motori a vapore rotatori
- 20 *HYDRAULIC TUBE DRAWING COMPANY, 14**
Wharf, Macclesfield-street North, London
Seamless cold drawn steel tubes
Tubes d'acier sans soudure étirés à froid
Kalt gezogene Stahl-Röhren, ohne Loth
Tubi d'acciaio senza costura stesi al freddo
- 21 KENNEDY'S PATENT WATER METER COMPANY (Limited)**, Kilmarnock, Scotland
Water meter
Compteur à eau
Wassermesser
Misuratore ad acqua
- 22 LAMBERT BROTHERS**, The Alpha Tube and Fitting Works, Walsall
Wrought-iron tubes for water, steam, and gas
Tubes en fer forgé pour appareils à eau, à vapeur, et à gaz
Schmiedeeiserne Röhren für Wasser, Dampf und Gas
Tubi in ferro battuto per acqua, vapore, e gas
- 23 LAMBERT, T., & SONS**, Short-street, Lambeth, London
Brass and iron fittings for water and gas, steam valves, pumps, &c.
Pièces détachées en laiton et en fer pour appareils à eau et à gaz, soupapes d'accès, pompes
Messing- und Eisenwaaren für Wasser- und Gasanlagen, Dampfventile, Pumpen etc.
Fornimenti di ferro e d'ottone per acqua e per gas, valvole per vapore, pompe, ecc.

- 23A LEONI, SIGISMUND, 34 St. Paul's-street, London**
Gas burners, gas stoves, taps, &c., of 'adamas'
Becs à gaz, poêles à gaz, robinets, etc., d' 'adamas'
Gasbrenner, Gasöfen, Hähne etc. von 'Adamas'
Becchi da gas, stufe a gas, cannelle, ecc., di 'adamas'
- 24 LLOYD, CHARLES, 70 Guildford-street, Southwark, London**
Noiseless blowing fan
Soufflet fonctionnant sans bruit
Geräuschloser Fächer
Ventaglio che funziona senza romore
- 25 LLOYD & LLOYD, Albion Tube Works, Birmingham**
Wrought-iron tubes and fittings
Pièces détachées et tubes en fer forgé
Röhren und Geräthe aus Schmiedeeisen
Fornimenti e tubi di ferro battuto
- 26 LONDON & WESTMINSTER METER COMPANY, Lupus-street, London**
Water and gas meters
Compteurs à eau et à gaz
Wasser- und Gasmesser
Misuratori per acqua e per gas
- 27 *MARTIN, F., 17 Gracechurch-street, London**
Models of various machines
Modèles de machines diverses
Modelle verschiedener Maschinen
Modelli di varie macchine
- 28 MERRYWEATHER & SONS, Long Acre, and Lambeth, London (Appendix, pp. 196-7)**
Steam and hand fire engines; fire-escape; hoses, buckets, &c.
Pompes à incendie à main et à la vapeur; appareil de sauvetage en cas d'incendie; tuyaux, seaux, etc.
Dampf- und Handfeuerspritzen; Rettungsleitern; Wasserschlänche, Feuereimer u. s. w.
Pompe da incendio a mano e a vapore; scala per salvare dall' incendio; tubi, secchie, ecc.
- 29 MOORE, E., & Co., 55 Warren-street, Fitzroy-square, London**
Pressure and water gauges, steam fittings, &c.
Manomètres et indicateurs de niveau d'eau; pièces détachées de machines à vapeur, etc.
Druck- und Wasser-Manometer, Zubehör von Dampfmaschinen etc.
Staze a pressione, e ad acqua, fornimenti per vapore, ecc.
- 30 NADAL, J., & Co., 13 Newman-st., London**
Machinery for fountains
Mécanique de jet-d'eau
Springbrunnen-Maschinerie
Meccanismo per getti d'acqua
- 31 NEWTON & BRADDOCK, Globe Meter Works, Oliver-street, Oldham**
Gas meters, &c.
Compteurs à gaz, etc.
Gasmesser etc.
Misuratori per gas, ecc.
- 32 *NICHOLSON, W. N., Trent Iron Works, Newark**
Steam hoisting engine
Grue à vapeur
Dampfmaschine zum Aufwinden
Gru a vapore
- 33 NORTH MOOR FOUNDRY COMPANY, North Moor, Oldham**
Turbines, centrifugal pumps, fans, blast engines, steam engines, &c.
Turbines, pompes à force centrifuge, soufflets, machines soufflantes, machines à vapeur, etc.
Turbinen, Centrifugal-Pumpen, Fächer und Dampfgebläse, Dampfmaschinen etc.
Turbine, pompe centrifughe, ventilatori, macchine soffianti, motori a vapore ecc.
- 34 *ORKNEY, EARL OF, 3 Ennismore-pl., London**
Rotary steam engine
Machine à vapeur rotatoire
Rotirende Dampfmaschine
Motori a vapore rotatori
- 35 PAUL, MATTHEW, & Co., Levenford Works, Dumbarton, Scotland (Appendix, pp. 198-9)**
Steam windlass for ship's deck, with double action pumps attached
Manivelle à vapeur pour pont de navires, avec pompes à double effet
Dampfwinde für Schiffe, verbunden mit einer doppelt wirkenden Pumpe
Argango a manubrio a vapore per ponte di nave, con pompe a doppia azione annesse
- 36 *ROBERTS, WILLIAM, West Ferry-road, Millwall, London**
Steam fire engine and steam pump
Pompe à incendie à la vapeur, pompe à la vapeur
Dampfweuerspritze und Dampfmaschine
Pompa da incendio a vapore, e pompa a vapore
- 37 ROYAL SOCIETY FOR THE PROTECTION OF LIFE FROM FIRE, 59 Ludgate-hill, London (Appendix, p. 200)**
Fire-escape
Appareil de sauvetage en cas d'incendie
Rettungsmaschine
Scappa-incendio
- 38 RUSSELL, J., & Co., 69 Upper Thames-street, London (Appendix, p. 201)**
Marine boiler tubes, gas tubes, and fittings
Tubes de chaudières à l'usage de la marine, tuyaux, etc. pour la conduite du gaz
Schiffsdampfkesselhöhren, Gasröhren und Zubehör
Tubi per caldaia navale, tubi per gas, e fornimenti
- 39 RUSSELL, JAMES, & SONS, Crown Tube Works, Wednesbury**
Wrought-iron tubes for gas, steam and water boiler tubes, &c.
Tuyaux forgés pour la conduite du gaz, tubes de chaudières, etc.
Schmiedeeiserne Röhren für Gas, Dampfkesselhöhren etc.
Tubi per gas di ferro battuto, tubi da caldaia per vapore e per acqua, ecc.

- 40 SHAND, MASON, & Co., 75 Upper Ground-street, London
Steam and hand fire engines, pumps, &c., also portable fire engine invented by the late Captain Fowke, R.E., and adopted by the War Department
Pompes à incendie ordinaires et à vapeur, pompes, etc.; pompe à incendie portative inventée par feu le Capitaine Fowke, R.E., et adoptée par le Ministère de la Guerre
Dampf- und Handfeuerspritzen, Pumpen etc., sowie tragbare Feuerspritzen, eine Erfindung des verstorbenen Capitain Fowke, R.E., adoptirt vom Kriegsministerium
Pompe da incendio a vapore, e a mano, pompe, ecc., ed anche pompe da incendio portatili inventate dal defunto Capitano Fowke (Genio Militare) e adottate dal Ministero della Guerra
- 40A SWANN, J. R., 21 Leith-walk, Edinburgh (Appendix, p. 194)
Patent safety valve for steam boilers
Soupape de sûreté pour chaudières
Patentirtes Sicherheitsventil für Dampfkessel
Valvola di sicurezza per caldaia à vapore (patentata)
- 40B SIEMENS, C. W. (see Class 64)
Governor, pyrometer, &c.
Régulateur, pyromètre, etc.
Regulator, Hitzemesser u. s. w.
Regolatore, pirometro, ecc.
- 41 TANGYE BROTHERS, Clement-street, Birmingham (Appendix, pp. 192–3)
Machines for cutting and punching iron, and for lifting heavy weights
Machines à percer et à découper le fer, et pour la manœuvre des fardeaux
Maschinen zum Schneiden und Durchlöchern des Eisens, und zum Aufheben grosser Gewichte
Macchine per tagliare e punzonare il ferro, e per sollevare gravi pesi
- 42 TANNED LEATHER COMPANY, Armit Works, Greenfield, near Manchester
Leather straps for machinery, leather hose
Courroies de machines, tuyaux de cuir
Treibriemen für Maschinen, lederne Wasserschläuche
Cigne di cuoio per meccanismi, condotti di cuoio
- 43 *TERRELL, W., & SONS, 6 Welsh Back, Bristol
Ward's patent packing for steam engines
Étoupage breveté de 'Ward' pour machines à vapeur
Ward's patentirte Stopfbüchsen für Dampfmaschinen
Ristoppamento Ward per stantuffi, ecc. di macchine a vapore (patentato)
- 44 THOMSON, R. W., 3 Moray-place, Edinburgh
Differential rotary steam engine
Machine à vapeur rotatoire différentielle
Differential-Dampfmaschine mit Kreisbewegung
Motore rotatorio a vapore differenziale
- 46 *VINCENT, JOHN, 8 Buckingham-street, Adelphi, London
Direct acting steam engine
Machine à vapeur agissant directement
Direct wirkende Dampfmaschine
Motore a vapore ad azione diretta
- 47 WALKER, T., & SON, 58 Oxford-street, Birmingham
Water meters, ships' logs, sounding machines
Compteurs à eau, lochs, appareils de sondage
Wassermesser, Loge für Schiffe, Maschine zum Sondiren
Misuratori ad acqua, lò di navi, macchine per scandagliare
- 48 WEST & GREGSON, Union-street, Oldham
Station gas meters and governors, & apparatus used in gas works
Compteurs à gaz et régulateurs, et matériel des usines à gaz
Gasmesser und Regulatoren und Apparate, gebraucht in Gasfabriken
Misuratori e regolatori di gas per stazioni, e apparati usati nelle officine del gas
- 49 WESTON, T. A., 25 Temple-row, Birmingham
Hoisting apparatus, dynamometer, &c.
Grue de chargement, dynamomètre, etc.
Apparat zum Aufwinden, Dynamometer etc.
Apparati per issare, dinamometro, ecc.
- 50 *WHITE, JOSEPH, 7 Trinity-street, Borough, London
Oil feeders, and grease lubricators, &c.
Appareils de graissage, pour adoucir les frottements, etc.
Apparate zum Einölen, Schmierbüchsen etc.
Distributori d'olio, e lubrificatori grassi, ecc.
- 51 WILLIAMSON BROTHERS, Cadal Iron Works, Kendal
Turbines, centrifugal pumps, &c.
Turbines, pompes à force centrifuge, etc.
Turbinen, Centrifugal-Pumpen etc.
Turbine, pompe centrifuge, ecc.

(Appendix, p. 207)
Improved machinery for preparing wool for spinning
Machines perfectionnées pour la préparation de la laine
Verbesserte Maschinerie um Wolle zum Spinnen vorzubereiten
Meccanismi perfezionati per preparare la lana per la filatura
- 8 HODGKIN, J. ELIOT, West Derby, Liverpool
(Appendix, p. 208)
Flax machinery
Machines à broyer et à teiller le lin
Flachsmaschinerie
Meccanismi pel lino
- 9 HORSFALL, WILLIAM, 131 Great Bridgewater-street, Manchester
Cards and card cloth; patent card grinder
Cardes et étoffes pour cardes; machine à fabriquer les cardes
Krämpel und Krämpeltuch; Maschine zum Schärfen der Krämpel
Cardi, e panno per cardi, affila-cardi (patentato)
- 10 HOWARD & BULLOUGH, Accrington (Appendix, p. 209)
Cotton manufacturing machinery
Machines pour la filature du coton
Baumwollenspinnmaschinen
Meccanismi pella fabbricazione dei cotonami
- 11 LAWSON, S., & SONS, Leeds
Flax-spinning machinery
Machines pour la filature du lin
Flachsspinnmaschinerie
Meccanismi pella filatura del lino
- 11A LEONI, SIGISMUND, St. Paul's-street, New North-road, London
Spinning machine—*Machine à filer*
Spinmaschine—*Macchina per filare*
- 12 LISTER, GEORGE, Rivers, Dursley, Gloucestershire
Condenser and carding machine
Machine de condensation, machine à carder
Condensator und Krämpelmaschine
Condensatore e macchina da cardare
- 13 MALLINSON, KNAFTON, & Co., Dixon-lane, Wortley, near Leeds
Samples of wood and leather, tow and flax card clothing, &c.; leather belting
Garnitures de bois et de cuir pour carder le lin et les étoupes de lin; courroies de machines
Proben von Stoffen aus gekrämpeltem Holz und Leder, Werg und Flachs etc.; Treibriemen
Campioni di panno da cardi di legno e cuoio, stoppa e lino, ecc., bande di cuoio
- 14 *MURRAY, BARNABY A., 2 Palace-street, Dublin
Silk throwing and doubling machine
Machine pour le moulinage et retordage de la soie
Maschine zum Seidenbereiten und Zwrinnen
Macchina per tirare e torcere la seta
- 15 PLATT BROTHERS & Co., Oldham (Appendix, pp. 210–23)
Series of preparing, spinning, and weaving machinery for cotton and woollen
Série de machines pour la préparation, la filature et le tissage du coton et de la laine
Eine Reihe von Maschinerie für die Zubereitung, das Spinnen und Weben von Baumwolle und Wolle
Serie di meccanismi per preparare, filare, e tessere lana e cotone
- 16 WATKINS, THOMAS, 89 Bridge-street, Bradford
Porcelain spinning guides, washers, shuttle-eyes, &c.
Guides de métiers à tisser, rondelles, trous de navettes, etc., de porcelaine
Porcellan-Leiter zum Spinnen, Washer (ringförmige Scheiben für Reibung oder luftdichten Verschluss); Augen für Weberschiffchen etc.
Guide pella filatura, cercini, buchi di spolette, ecc., di porcellana
- 17 WREN & HOPKINSON, London-road Iron Works, Manchester
Machines for winding bobbins, cards, and balls of cotton, sewing thread, flax, and silk
Machines à dévider des bobines, des cartes et des pelottes de fil à coudre, de coton, de lin et de soie
Maschinen zum Aufwinden von Baumwolle, Nähzwirn, Flachs, und Seide auf Spulen
Karten und Knäuel
Macchine per dipanare rocchetti, cardi, e gomoli di cotone, filo da cucire, lino e seta

CLASS LVI.

Apparatus and Processes used in Weaving.

Matériel et Procédés du Tissage.

Apparate und Processe, die zum Weben gebraucht werden.

Apparecchi e Processi usati nel Tessere.

NOTE.—Names marked with an asterisk are those of persons who do not exhibit in this class.

1 BROOKE, S., & SON, Calder Vale Works, Brighouse, Normanton
Card clothing for machinery
Garnitures de cardes pour la mécanique
Besatz für Maschinerie
Fornimenti di carte per macchina

2 COOK & HACKING, California Iron Works, Bury, Lancashire
Looms, &c.; patent wire healds
Métiers, etc.; tissés de fil de fer brevetés
Webestühle etc.; patentirte Drahtwerfen
Telai, ecc., licci di fil di ferro (patentati)

4 HALL, ROBERT, Hope Foundry, Bury, Lancashire
Power-loom, winding machines, and models
Métiers mécaniques, machines à bobiner, et modèles
Dampfwebestühle, Haspel und Modelle
Telai meccanici, macchine da incannare, e modelli

5 HATTERSLEY, G., & SONS, Keighley
Power-loom
Métiers mécaniques
Dampfwebestühle
Telai meccanici

6 HODGSON, G., Laycock's Mill, Bradford
Looms
Métiers
Webestühle
Telai

7 INGHAM, J., & SONS, Thornton, near Bradford
Case of shuttles, shuttle-pikes, and tackling for weaving
Navettes, broches, et appareils du tissage
Ein Kasten mit Weberschiffchen, Spitzen für Weberschiffchen und Geräthe zum Weben
Cassa di spole, punte di spola, attrazzi per tessere

8 IRVIN & SELLERS, Peel Hall Works, Preston (Appendix, p. 224)
Shuttles, bobbins, &c., used in the spinning of fibres
Navettes, bobines, etc., servant à la filature des fibres textiles
Weberschiffchen, Spulen etc., gebraucht beim Spinnen
Spole, cannelle, ecc., usati nella filatura della fibra

9 KEIGHLEY, J., & Co., Birksland Wor, Bradford
Looms for weaving worsted goods
Métiers à tisser la laine
Webestühle für wollene Zeuge
Telai per tessere manifatture di stame

10 LEEMING, J., & SON, Bradford (Appendix, p. 225)
Power looms
Métiers mécaniques
Kraftwebestühle
Telai meccanici

12 *LIVESEY, HENCKEL, & Co., Greenbank Foundry, Blackburn, Lancashire
Weaving utensils
Appareils pour le tissage
Webergeräthschaften
Utensili per tessitura

13 PARKER, C., & SON, Lady Bank Works, Dundee (Appendix, p. 226)
Machinery connected with weaving
Machines pour le tissage
Maschinerie für Weberei
Meccanismi relativi alla tessitura

- 14 *PRIESTLEY BROTHERS, Hope Mill, Halifax
Silk combs and cards
Peignes et cardes pour le tissage de la soie
Seidenkämme und Krämpel
Pettini e cardì da seta
- 15 *RAMSDEN, J. C., Market-street, Bradford
Patent elastic reeds and healds
Ros et lisses élastiques, brevettés
Patentirte elastische Spulen und Werften
Licci e cannelle elastiche (patentate)
- 16 SALTER, SAMUEL C., High-street, Market Drayton
Portable apparatus to shrink woollen and other fabrics by steam
Appareil portatif à vider les tissus de laine, etc., par la vapeur
Locomobiler Dampfapparat zum Einlaufen lassen von wollenen und anderen Stoffen
Apparato portatile per infeltrire manifatture di lana ed altro a vapore
- 17 SMITH, JOHN & SAMUEL, Low Bridge Works, Keighley
Worsted spinning machinery
Machines à filer l'estame
Wollgarn-Spinnmaschinerie
Macchine per filar lo stame
- 18 SMITH, W., & BROTHERS, Sun Iron Works, Heywood, near Manchester
Looms, winding and dressing machines
Métiers, bobinoirs, apprêts mécaniques
Webestühle, Haspel- und Appretirmaschinen
Telai, machine per incannare e insaldare
- 19 SOWDEN & STEPHENSON, Bradford
Power looms
Métiers mécaniques
Dampfwebestühle
Telai meccanici
- 20 URQUHART, LINDSAY, & Co., Blackness Foundry, Larch-street, Dundee (App. p. 227)
Power-loom and drawings of machines
Métiers mécaniques, et dessins de machines
Dampfwebestühle und Zeichnungen von Maschinen
Telaio meccanico, e disegni di macchine

CLASS LVII.

Apparatus and Processes for Sewing, and for Making up Clothing.

Matériel et Procédés de la Couture et de la Confection des Vêtements.

Apparate und Processe zum Nähen und Kleidermachen.

Apparati e Processi per Cucire e per Confezionare Abbigliamenti.

Ardoises pour couvertures (voir le Bâtiment des Essais)
 Dachschiefer (siehe Probierhaus)
Lavagne da tetti (vedasi l'Edificio degli Esperimenti)

90 WHITE AND BROTHERS, Millbank-street, Westminster
 Specimens of Keene's Cement for floors and walls (see Testing House)
Spécimens du ciment 'Keene' pour planchers et murs (voir le Bâtiment des Essais)
 Proben von Keene's Cement für Fussböden und Wände (siehe Probierhaus)
Saggi dei cementi 'Keene' per pavimenti e muri (vedasi l'Edificio degli Esperimenti)

91 WHITE & Co., Marylebone-street, London
 Papier maché wall decorations (see Testing House)
Décor d'appartement en papier mâché (voir le Bâtiment des Essais)
 Wandverzierungen in papier mâché (siehe Probierhaus)
Decorazioni murali in carta pesta

92 WILLOUGHBY DE ERESBY, RIGHT HON. LORD, Adamantine Tile Works, Little Bytham
 Plain adamantine clinkers (see Testing House)
Briques adamantines unies (voir le Bâtiment des Essais)
 Einfache sehr harte Ziegelsteine (siehe Probierhaus)
Pianelle semplici dette clinkers (risuonanti) adamantine (vedasi l'Edificio degli Esperimenti)

93 WINGATE, T., & Co., Whiteiuch, near Glasgow
 Working model of dredging machine
Modèle de drague fonctionnant
 Ein Arbeitsmodell einer Baggermaschine
Modello di curaporti in azione

94 *WOOLLESCROFT, GEORGE, Chesterton Tiles, Staffordshire
 Flooring tiles
Carreaux de dallage
 Pflasterziegel
Pianelle per pavimento

CLASS LXVI.

Navigation, Marine Engines, Life Boats, &c.

Matériel de la Navigation et du Sauvetage; Machines de Bâtimens à Vapeur.

Schiffahrt, Dampfmaschinen für Schiffe, Rettungsböte etc.

Nautica, Motori Navali, Barche di Salvagione, ecc.

(For detailed classification, see p. xxv.)

Diving apparatus—*Appareil à plongeur*

Tauchapparat—*Apparati di palombaro*

3B BASHFORTH, F. (see Class 12)

Chronograph—*Chronographe*

Chronograph—*Cronografo*

4 BENHAM & SONS, 19 Wigmore-street, London

Models of ships' cooking apparatus

Modèles de cuisine pour navires

Modelle von Schiffsküchen

Modelli di cucine navali

5 *BERTHON, REV. E. L., M.A., F.R.A.S., Vicarage, Romsey

Models of collapsing lifeboats, &c.

Modèles de bateaux de sauvetage pouvant se voir comme un soufflet, etc.

Modelle von zusammenlegbaren Rettungsböten

Modelli di battelli da salvamento capaci di piegarsi

6 *BIRT, J., JUN., 4 Dock-street, London-dock

Life belts, life buoys

Ceintures et bouées de sauvetage

Gürtel und Bojen zum Lebensretten

Cinture e boa da salvagione

6A BOARD OF TRADE, Whitehall, London

Rocket apparatus for saving life from shipwreck

Porte-amarre pour sauver la vie en cas de naufrage

Raketenapparat zum Retten von Menschenleben in Schiffbrüchen

Cavo da tasca pella salvagione della vita in caso di naufragio

7 BOLTON, CAPTAIN FRANK, 13 Bruton-street, Berkeley-square, London

Signal and telegraphic apparatus

Appareil télégraphique à signaux

Signal and Telegraphische Apparate

Apparati telegrafici e segnali

8 BURLEY, ROBERT, Great Wellington-street, Glasgow

Models of steamers

Modèles de navires à vapeur

Modelle von Dampfschiffen

Modelli di piroscafi

- 9 BURNLEY & Co., Millwall, London
Ships' tanks and cisterns
Caisnes à eau et réservoirs
Wasserbehälter und Cisternen für Schiffe
Cisternette e cisterne navali
- 10 THE CANOE CLUB, Capt. J. Macgregor, Esq.,
1 Mitre-buildings, London
Canoes—*Pirogues*—Kähne—*Piroghe*
- 10A CATOR, G. A., 20 London-street, Fenchurch-street, London
Skinner's patent vertical steering apparatus
Appareil de gouvernail vertical, brevet Skinner
Skinner's patentirter verticaler Steuerapparat
Apparato verticale per governare di Skinner (patentato)
- 11 CHANCE BROTHERS (see Classes 16 and 44)
Dioptric lighthouse apparatus
Appareils dioptriques pour phares
Dioptrische Leuchthurm-Apparate
Apparati diottrici per fari
- 12 CLARK, EDWIN, 24 Great George-street, Westminster, London
Model of hydraulic lift graving dock
Modèle de bassin de radoub avec machine hydraulique élévatoire
Modell eines Kalfat-Docks mit hydraulischem Hebeapparat
Modello di bacino da carenaggio con sollevatore idraulico
- 13 CLIFFORD, C., 3 East India-avenue, Leadenhall-street, London
System of unlashing, lowering, and disengaging boats, &c.
Système pour mettre à la mer les canots de côté, et décrocher les palans quand les canots sont amenés
System, Böte loszubinden, herabzulassen und freizumachen etc.
Sistema per slacciare, calare e liberare le lancia, ecc.
- 14 COLES, CAPTAIN COWPER
Drawings of turret ships
Dessins de vaisseaux à tourelles
Zeichnungen von Thurmschiffen
Disegni di navi torricelle
- 14A COLLING & PINKNEY, Sunderland
Model of patent reefing apparatus
Modèle d'un appareil breveté pour prendre des ris aux voiles
Modell eines patentirten Reffe-Apparates
Modello d'un apparato per agguantare (patentato)
- 15 COLOMB, COMMANDER P. H., R.N., 179 St. George-street, London
Patent flashing signals and warning lights for preventing collisions at sea
Signaux à éclats brevetés, et fanaux d'alarme pour prévenir l'abordage entre les bâtiments en mer
Patentirte momentare Lichtsignale und leuchtende Warnsignale um Collisionen zur See zu verhüten
Segnali lampeggianti, e lumi premonitori per impedire le collisioni in mare
- 16 *CUNNINGHAM, H. D. P., Bury-house, Gosport, Hants
Patent ships' braces
Bras de vergue brevetés
Patentirte Brassenhaspel und Brassen
Arganetto da bracci e bracci (patentati)
- 17 DAFT, T. B., Cleves Lodge, Church-street, Chelsea, London
Construction of iron ships and sheathing the same
Système de construction de bâtiments en fer avec doublage métallique
Construction von eisernen Schiffen und Platten für dieselben
Costruzione di navi in ferro, e doppiaggio delle medesime
- 18 DENNY BROTHERS, Dumbarton
Models of steam-ships, marine engines, and ships' steering gear
Modèles de bâtiments à vapeur, de machines et d'appareil de barre de gouvernail
Modelle von Dampfschiffen, Dampfmaschinen für Schiffe, und Schiffssteuer Apparate
Modelli di piroscafi, motori navali, e drizze del timone di nave
- 18A EAMES, W., Royal Dockyard, Chatham
Working model of a plan for connecting and disconnecting marine engines from their screws
Modèle fonctionnant pour démontrer un système pour établir et suspendre la communication entre les machines marines et leurs hélices
Arbeitendes Modell eines Planes für die Verbindung und Trennung von Schiffsdampfmaschinen von ihren Schrauben
Modello in attività per dimostrare un sistema di fare e disfare la comunicazione tra le macchine marine e loro elici
- 18B DUNN, T. (see Class 65)
Drawings of section of a marine boiler
Dessins de section d'une chaudière de bateau à vapeur
Zeichnungen des Durchschnitts eines Schiffsdampfkessels
Disegni della sezione d'una caldaia marina
- 19 EVELYN, LIEUT.-COL. G. P., 34 Onslow-gardens, London
Steering propeller for steam ships, &c.
Propulseur de navires à vapeur servant en même temps de gouvernail, etc.
Bewegungsmaschine für die Steuerruder der Dampfschiffe etc.
Propulsora guidatore per piroscafi, ecc.
- 20 GISBORNE, F. N., 445, West Strand, London
Electric and pneumatic signals, anti-fouling and anti-corrosive paint for ships
Signaux électriques et pneumatiques, enduit anticorrosif pour navires
Electrische und pneumatische Signale, Anstrichfarbe für Schiffe um das Beschmutzen und Zerfressen zu verhüten
Segnali elettrici e pneumatici, tinta per navi anti-adesiva, ed anti-corrosiva

- 20A GLOVER, REV. F., M.A.,** Vicarage, Brad-
ing, Isle of Wight
Small kedge anchors—*Petits ancres*
Kleine Wurfanker—*Ancorette*
- 21 GOURLAY BROTHERS & Co.,** Dundee
Models of iron steam and sailing vessels
Modèles de bâtiments en fer à vapeur et à voiles
Modelle von eisernen Dampf- und Segelschiffen
Modelli di navi in ferro a vapore e a vela.
- 22 HALSTED, REAR-ADMIRAL E. P.,** 74 Ebury-
street, London
Models, &c., for future turret navies
*Modèles, etc., pour vaisseaux à tourelles, la ma-
rine de l'avenir*
Modelle etc. für künftige Thurmschiffe
Modelli, ecc., per flotte future a torricelle

ings, London
Machines and iron work for shipping
Machines et pièces de grosse forge pour la marine
Maschinen und Eisenwerk für Schiffe
Macchine e lavori in ferro ad usi marini
- 23 HARVEY, J., & Co.,** Wivenhoe, Essex
Models of yachts—*Modèles de yachts*
Modelle von Yachten—*Modelli da balandre*
- 24 HAY, W. J.,** Lymington Lodge, Southsea
Water-proof glue and anti-fouling and pro-
tective varnish for ships' bottoms
*Colle-forte imperméable à l'eau, et enduit anti-
corrosif pour conserver le fond des bâtiments*
Wasserdichter Leim und Zerfressen ver-
hütender Firnis
Colla a prova d'acqua, e vernice anti-adesiva
- 25 *HERBERT, MRS. (widow of the late GEORGE
HERBERT),** 1 Cophall-buildings, London
Models of light-houses, buoys, beacons, &c.
Modèles de phares, bouées, balises, etc.
Modelle von Leuchthürmen, Wahrtonnen
(Bojen), Feuerwarten etc.
Modelli di fari, boa, e marche
- 26 HEWITT, WILLIAM,** Stephenson-house, Al-
bert-park, Bristol
Screw propeller, steering apparatus, naval
gun, breech-loading cannon, &c.
*Propulseur à hélice, appareil de barre de gouver-
nail, canon pour la marine, canon se chargeant
par la culasse, etc.*
Schraubenpropeller, Steuerapparate, Schiffs-
kanone, Kanone, die von hinten geladen wird,
etc.
*Propulsore à elice, apparato del timone, cannone
navale, cannone caricantesi dalla culatta, ecc.*
- 26A HOPCRAFT & Co.,** 20 London-street, Fen-
church-street, London
Skinner's patent vertical steering apparatus
Appareil de gouvernail vertical, brevet Skinner
Skinner's patentirter verticaler Steuer-Apparat
*Apparato verticale per governare di Skinner
(patentato)*
- 27 HUMPHRYS & TENNANT,** Deptford-pier,
London
Model of marine steam-engine
Modèle de machine à vapeur de navires
- Modell einer Seedampfmaschine
Modello di motore a vapore navale
- 29 HURST, CAPT. J. W.,** 33 Florence-road, New
Cross, Kent
Double pontoon life raft, &c.
Radeau de sauvetage à double ponton, etc.
Doppeltes Ponton-Rettungsfloss etc.
Doppio pontone, zattera di salvazione, ecc.
- 30 HUXHAMS & BROWN,** Commercial-road,
Exeter
Machines and iron work for shipping
Machines et pièces de grosse forge pour la marine
Maschinen und Eisenwaren für Schiffe
Macchine e lavori in ferro navali
- 31 INGLIS, A. & J.,** 64 Warrock-st., Glasgow
Models of steamers—*Modèles de vapeurs*
Modelle von Dampfschiffen—*Modelli di pi-
roscafi*
- 32 KAY & REID,** 50 Wellington-street, Glasgow
Model of carved figure head for ships
Modèle de pouline sculptée
Modell einer Schiffsfigur
Modello di testa di figura intagliata per nave
- 33 KINNEAR, F.,** 2 Mortimer-place, Mortimer-
road, De Beauvoir Town, London
Life and ship preserving apparatus
Appareil de sauvetage, porte-amarre
Lebens- und Schiffs-Rettungsapparat
Apparato di salvazione per persone e per nave
- 34 LAIRD BROTHERS,** Birkenhead
Models of war and merchant vessels
*Modèles de vaisseaux de guerre et de bâtiments
de commerce*
Modelle von Kriegs- und Handelsschiffen
Modelli di navi da guerra e mercantili

- 48 OSWALD & Co.**, Pallion Iron Ship Building-yard, Sunderland (Appendix, p. 282)
 Models of steamers, &c.
Modèles de vapeurs, etc.
 Modelle von Dampfschiffen etc.
Modelli di piroscafi, ecc.
- 49 PALMER'S SHIP BUILDING & IRON COMPANY (Limited)**, Newcastle-on-Tyne
 Models of steamers
Modèles de vapeurs
 Modelle von Dampfschiffen
Modelli di piroscafi, ecc.
- 49A PAUL, MATTHEW, & Co.** (see Class 53)
- 50 PENN, J. & SON**, Greenwich
 Marine engines
Machines à vapeur pour la marine
 Dampfmaschinen für die Marine
Motori a vapore navali
- 50A RANDOLPH, ELDER, & Co.** (see Class 65)
 Models of ships for the British Pacific Steam Company
Modèles de bâtiments pour la 'British Pacific Steam Company'
 Modelle von Schiffen der 'British Pacific Steam Company'
Modelli di navi pella 'British Pacific Steam Company'
- 51 RAVENHILL, HODGSON, & Co.**, Glass-house-fields, Ratcliff, and Orchard Wharf, Black-wall, London (Appendix, p. 228)
 Marine steam engines
Machines à vapeur de navires
 Schiffs-Dampfmaschinen
Motori a vapore navali
- 52 REGISTRAR-GENERAL OF SEAMEN**, Adelaide-place, London Bridge, London
 Models showing the mode of using the flags of the International Commercial Code of Signals
Modèles pour démontrer la manière de se servir des pavillons du Code Commercial International des signaux
 Modelle, die internationale commerciale Signalweise zeigend
Modelli per dimostrare l'uso delle bandiere del Codice Commerciale Internazionale dei segnali
- 53 RENNIE, J. & G.**, 6 Holland-street, Blackfriars-road, London (Appendix, p. 288)
 Marine steam engines and models of ships and floating docks
Machines à vapeur de navires, et modèles de bâtiments et de docks flottants
 Schiffs-Dampfmaschinen und Modelle von Schiffen und schwimmenden Docks
Motori a vapore navali e modelli di navi, e di bacini galleggianti

54 RICHARDSON, DUCK, & Co., Stockton-on-Tees

Models of ships, &c.

Modèles de bâtimens, etc.

Modelle von Schiffen etc.

Modelli di navi, ecc.

55 RITCHIE, J. H., JUN., 106 Leadenhall-street, London

Models of ships and steamers; bolts for composite ships

Modèles de navires à voiles et à vapeur, boudons pour bâtimens de construction mixte en bois et en fer

Modelle von Schiffen und Dampfschiffen, Riegel für zusammengesetzte Schiffe

Modelli di navi e piroscafi; chiodi per navi composite

56 *RITHERDON, E., 109 Fenchurch-street, London

Models illustrating method of sheathing iron ships

Nouvelle méthode de doublage en cuivre

Modelle zur Erklärung des Verfahrens, eiserne Schiffe zu verblechen

Modelli illustrativi del metodo di doblaggio per navi in ferro

57 ROYAL NATIONAL LIFEBOAT INSTITUTION, 14 John-street, Adelphi, London (Appendix, pp. 283-4)

Lifeboat and carriage; models and drawings of the same and appliances for saving life from shipwreck

Bateau de sauvetage, dit 'lifeboat,' avec son chariot; dessins et modèles de 'lifeboat,' et appareils de sauvetage en cas de naufrage

Rettungsboot und Wagen; Modelle und Zeichnungen desselben und Vorkehrungen zum Retten von Menschenleben in Schiffbrüchen

Lancia di salvagione e suo carriaggio; modelli e disegni della medesima, e cose attinenti alla salvagione della vita in caso di naufragio

58 SAMUDA BROTHERS, Poplar, London

Models of ships of war, yachts, &c.

Modèles de vaisseaux de guerre, yachts, etc.

Modelle von Kriegsschiffen, Jachten etc.

Modelli di navi da guerra, balandre, ecc.

59 SEARLE & SONS, Stangate, Lambeth, London

Boats and models of boats

Canots et modèles d'embarcations

Böte und Modelle von Böten

Barche e modelli di barche

60 SHEDDEN, H., 10 Wapping-street, Liverpool

Ships' flags

Pavillons

Schiffsfahnen

Bandiere navali

61 SIMONS, W. & Co., London Works, Renfrew, Glasgow

Models of steam engines and steamers

Modèles de machines et de bâtimens à vapeur

Modelle von Dampfmaschinen und Dampfschiffen

Modelli di motori navali e piroscafi

62 TAYLOR, J., & SONS, Britannia Works, Birkenhead (see Class 52)

Steam winch, with deck pumps

Manivelle à vapeur pour faire fonctionner les pompes de tillac

Dampfhaspel mit Deckpumpen

Argani a vapore, con pompe in coverta

63 THAMES IRON WORKS SHIP BUILDING, ENGINEERING, AND DRY DOCK COMPANY (Limited), Blackwall, London

Models of ironclad frigates and steam ships

Modèles de frégates cuirassées, et de bâtimens à vapeur

Modelle von Panzer-Fregatten und Dampfschiffen

Modelli di fregate e piroscafi corazzati

64 TRINITY HOUSE CORPORATION, Tower-hill, London (Appendix, pp. 285-8)

Electric and other lighthouse apparatus, fog signals, models of vessels, buoys, beacons, &c.

Appareils d'éclairage électrique de phares et autres, signaux de brume, modèles de navires, bouées, balises, etc.

Electrische und andere Leuchthurm-Apparate; Nebel-Signale, Modelle von Fahrzeugen, Bojen, Leuchtfener etc.

Apparati elettrici ed altri per far i segnali da nebbia, modelli di bastimenti, boa da salvagione, lanterne, ecc.

65 TUCKER, J. SCOTT, London (see Class 37)

Models of fastenings for balance rudder

Modèle d'un système de monter le gouvernail

Modelle der Befestigung von Balancier-Steuerrudern

Modelli illustrativi del modo di fissare il timone a bilancia

66 *WALKER, W. H., 9 Rumford Place, Liverpool

Model of hydraulic slip-lift

Modèle de cale hydraulique

Modell eines hydraulischen Hebeapparats

Modello di sollevatore idraulico

68 WARD, CAPTAIN J. R., R.N., 14 John-street, Adelphi, London (see Lifeboat exhibited by the Royal National Lifeboat Institution)

Life belts, life buoys

Ceintures et bouées de sauvetage

Schwimmgürtel, Rettungsbojen

Cinture e boa di salvagione

69 *WEST, J. G., & Co., 92 Fleet-street, London

Ship's compass and binnacles

Boussole et habitacles

Schiffscompass und Compasshäuschen

Bussola e chiesola di nave

70 WHETTEM, W. H., Royal Dock-yard, Portsmouth

Buoys fitted with bells

Bouées à cloches

Bojen mit Schellen

Boa muniti di campana

71 WHITE, J. S., East Cowes

Models of yachts and steam life boat

Modèles de yachts et de bateau de sauvetage à vapeur

Modelle von Jachten und Dampfrettungsböten

Modelli di balandre e lance di salvagione a vapore

73 WIGRAM, MONEY, & SONS, Blackwall-yard, London

Improved screw steering gear; Notman's port hinge

Drosse de gouvernail perfectionnée; gond de sabord Notman

Verbesserte Schrauben-Steuerapparat; Notman's Angel für Stückpforten

Drizze di timone a elice perfezionate, cardine di portelli perfezionati di Notman

75 WISHART, THOMAS, Port Glasgow

Models of ships—*Modèles de bâtiments**Schiffsmodelle—Modelli di navi*

76 *WRIGHT, J. W., 68 London-road, Southwark, London

New paddle-wheel

Roue à aubes, nouveau système

Neue Dampfschiffräder

Nuova ruota a pale

77 *YOUNG, LAMBERTON, Royal Humane Society, 4 Trafalgar Square, London

Models of apparatus for saving life in sea accidents

Modèles d'appareils de sauvetage en cas de naufrage, etc.

Modelle von Apparaten zur Lebensrettung in Unglücksfällen auf der See

Modelli di apparati per salvare la vita in pericoli di mare

CLASS LXVI. a.

 minster, London (exhibits also at Billancourt)
 Portable steam engine
Machine à vapeur locomobile
 Mobile Dampfmaschine
Motore a vapore portatile

2 AMIES, BARFORD, & Co., Peterborough (ex-
 hibits also at Billancourt)
 Agricultural implements
Instruments d'agriculture
 Ackerbaugeräthe
Utensili agrari

3 ASHBY & JEFFERY, Rutland-terrace Iron
 Works, Stamford (exhibit also at Billan-
 court) (Appendix, p. 143)
 Agricultural machines, steam engines, &c.
Machines d'agriculture, machines à vapeur, etc.
 Landwirthschaftliche Maschinen, Dampfma-
 schinen etc.
Macchine agricole, motori a vapore, ecc.

4 AVELING & PORTER, 72 Cannon-street,
 London (Appendix, p. 186)
 Agricultural locomotive steam engine
*Moteur locomobile à l'usage des machines agri-
 coles*
 Mobile Dampfmaschine für den Ackerbau
Locomotiva a vapore agricola

5 BALL, W., & SON, High-street, Rothwell,
 Northamptonshire
 Agricultural implements
Instruments d'agriculture
 Ackerbaugeräthe
Utensili agrari

- 6** BAMLETT, A. C., Thirsk, Yorkshire
Reaping and mowing machines
Moissonneuses et faucheuses
Ernte- und Mähmaschinen
Macchine da mietere e da falciare
- 7** BARROWS & CARMICHAEL, Banbury (exhibit also at Billancourt)
Agricultural portable steam engine of eight horse-power
Moteur locomobile de la force de huit chevaux à l'usage des machines agricoles
Transportirbare Dampfmaschine von acht Pferdekraft für den Ackerbau
Motore a vapore portatile agricolo della forza di otto cavalli
- 7A** BEENEY, E., JUN. (see Class 26)
- 8** BENTALL, E. H., Heybridge Works, near Maldon (exhibits also at Billancourt)
Agricultural implements
Instruments d'agriculture
Ackerbaugeräthe
Utensili agrari
- 9** BEVERLEY IRON AND WAGGON COMPANY (Limited), Beverley (Appendix, p. 142)
Patent three-horse reaping machine (at Billancourt)
Moissonneuse brevetée mue par trois chevaux (à Billancourt)
Patentirte Erntemaschinen für drei Pferde (ausgestellt zu Billancourt)
Macchine mietitrici a tiro a tre, patentate (a Billancourt)
- 10** BOYD, J., & Co., 48 Cannon-street, London
Agricultural and horticultural machinery
Instruments et appareils de l'agriculture et de l'horticulture
Maschinerie für den Feld- und Gartenbau
Meccanismi agricoli ed orticoli
- 11** BRABY, J., & SON, 42 Newington Causeway, Southwark, London (exhibit also at Billancourt)
Water cart
Appareil d'arrosment
Wagen zum Sprengen
Carro irrigatore
- 12** BRIGHAM & BICKERTON, Tweed Implement Works, Berwick-on-Tweed
Patent reaping machine; horse rake (at Billancourt)
Moissonneuse brevetée; rateau à cheval (à Billancourt)
Patentirte Erntemaschine, Pferderechen (zu Billancourt)
Macchine mietitrice (patentata); rastrella a cavalli (a Billancourt)
- 13** BROWN, W., & MAY, C. N., North Wilts Foundry, Devizes
Thrashing machines and steam engines
Machines à battre le blé et machines à vapeur
Dresch- und Dampfmaschinen
Trebbiatoi, e motori a vapore
- 14** CARSON & TOONE, Warminster, Wilts
Agricultural and dairy implements
Instruments d'agriculture et ustensiles de la laiterie
Ackerbau- und Milchwirtschaftsgeräthe
Utensili agrari e da cascina
- 15** CLARKE & SON, Brackley, Northamptonshire
Scythes—*Faux*
Sensen—*Falci*
- 16** CLAYTON, SHUTTLEWORTH, & Co., Lincoln (exhibit also at Billancourt) (Appendix, pp. 146-9)
Portable, traction, and fixed steam engines, thrashing machines, &c.
Machines à vapeur locomobiles, tractoires et fixes, machines à battre le blé, etc.
Transportable und stehende Dampfmaschinen, Strassen-Locomotiven, Dreschmaschinen etc.
Motori a vapore fissi, portatili, e a trazione, trebbiatoi, ecc.
- 17** COLEMAN & MORTON, London-road Iron Works, Chelmsford (exhibit also at Billancourt)
Agricultural implements and machines
Machines et instruments d'agriculture
Ackerbaugeräthe und Maschinen
Utensili e macchine agrarie
- 18** COPPARD, J., & Co., 84 Fleet-street, London
Improved roughing for horse-shoes
Outils de ferrer les chevaux à glace
Verbesserte Weise, Hufeisen zu schärfen
Perfezionamento nella ferratura a ghiaccio dei cavalli
- 19** DEAN, JOHN, Blenheim Foundry, Woodstock, Oxfordshire (exhibits also at Billancourt)
Patent sheep and feeding troughs
Rateliers-mangeoires à moutons, brevettées
Patentirte Schaf- und Futtertröge
Trogoli per le pecore, e per foraggi (patentati)
- 20** DELL, W. R., Mark-lane, London
Wheat-cleaning machines, mill-stones, &c. (at Billancourt)
Machines pour le nettoyage du blé, meules, etc. (à Billancourt)
Weizenreinigungsmaschinen, Mühlsteine etc. (zu Billancourt)
Macchine per mondar frumento, mole, ecc. (a Billancourt)
- 21** FOWLER, J., & Co., Cornhill, London
Steam plough—*Charrue à vapeur*
Dampfpflug—*Aratro a vapore*
- 22** FOX, WALKER, & Co., Atlas Iron Works, Bristol
Portable steam engine
Machine à vapeur locomobile
Transportable Dampfmaschine
Macchina a vapore portatile
- 23** FREER, JOHN, Rothley, near Loughborough
Dibbling machine—*Plantoir*
Pflanzmaschine—*Foraterra*

- 24 GARRETT, RICHARD, & SONS, Leiston Works, near Saxmundham, Suffolk (exhibit also at Billancourt) (Appendix, p. 145)
Agricultural machines, and steam engines
Machines agricoles et machines à vapeur
Ackerbau- und Dampfmaschinen
Macchine agrarie, e motori a vapore
- 25 GOULDING, W. & H. M., Patrick-street, Cork, and Westmoreland-street, Dublin
Manures—*Engrais*
Dünger—*Concimi*
- 26 HARTLEY, JOHN, Otley Mills, Bradford, Yorkshire
Corn screen
Machine à cribler le blé
Kornsieb
Vaglio da grano
- 27 HILL & SMITH, Brierly Hill Iron Works, near Dudley
Agricultural implements
Instruments agricoles
Ackerbaugeräthe
Utensili agrari
- 28 HORNSBY, R., & SONS, Grantham
Steam engines, thrashing machines, ploughs, reapers, &c.
Machines à vapeur, machines à battre le blé, charrues, moissonneuses, etc.
Dampf- und Dreschmaschinen, Pflüge, Erntemaschinen etc.
Motori a vapore, trebbiatori, aratri, macchine da mietere, ecc.
- 29 HOWARD, J. & F., Britannia Iron Works, Bedford, and 4 Cheapside, London (exhibit also at Billancourt) (Appendix, pp. 150-3)
Steam ploughs and other agricultural implements
Charrues à vapeur et autres instruments agricoles
Dampfplüge und andere Geräthe des Ackerbaues
Aratri a vapore ed altri utensili agrari
- 30 *HUDSON, ALFRED, Baker's Cross Farm, Cranbrook, Kent
Apparatus for agricultural works relating to hop culture
Appareils agricoles servant à la culture du houblon
Ackerbaugeräthe für die Hopfenpflanzungen
Apparati per lavori agrari relativi alla cultura del luppolo
- 31 JAMES, I., Tivoli Works, Cheltenham
Liquid manure cart, &c. (at Billancourt)
Charrette pour le transport des engrais liquides, etc. (à Billancourt)
Jauchenwagen etc. (zu Billancourt)
Carri pei concimi liquidi, ecc. (a Billancourt)
- 32 KEARSLEY, HENRY & GEORGE, North-street, Ripon
Grass-mowing and reaping machines
Faucheuses et moissonneuses
- Grasmähe- und Erntemaschinen
Macchine da mietere e da falciare
- 33 LONDON MANURE COMPANY, 116 Fenchurch-street, London
Chemical manures
Produits chimiques pour engrais
Chemische Dünger
Concimi chimici
- 34 MARSHALL, SONS, & Co. (Limited), Gainsborough (exhibit also at Billancourt) (Appendix, p. 154)
Portable and fixed engines, thrashing machines, mills, &c.
Machines locomobiles et fixes, machines à battre le blé, système de meules, etc.
Transportable und stehende Dampfmaschinen, Dreschmaschinen, Mühlen etc.
Motori portatili e fissi, trebbiatori, mulini, ecc.
- 35 MCLEAN & HOPE, 51 Timber Bush, Leith
Materials and products of Scottish agriculture
Matériel et produits de l'agriculture en Écosse
Materialien und Producte des Schottischen Feldbaues
Materiali e prodotti di agricoltura scozzese
- 36 *McSHERRY, M., Limerick
Agricultural boilers
Chaudières pour usages agricoles
Landwirthschaftliche Kessel
Caldaje par usi agrari
- 38 NICHOLSON, W. N., Trent Iron Works, Newark (exhibits also at Billancourt)
Hay-making and other agricultural machines
Faneuses et autres machines agricoles
Maschinen zum Heumachen und für andere Zwecke des Feldbaues
Macchine agrarie per fienatura ed altro
- 39 NOONE & Co., 5 Stratford-place, Hastings
Sewage manure, and model of works
Poudrette, et modèle d'usine
Dünger, gewonnen von den Cloaken, und Modell der Fabrik
Concimi di cloaca e modello di officina
- 40 PACKARD, E., & Co., 6 Princes-street, Ipswich (Appendix, p. 155)
Materials used in the manufacture of artificial manures
Produits employés à la fabrication des engrais artificiels
Materialien, gebraucht in der künstlichen Düngerfabrication
Materiali usati nella manifattura di concimi artificiali
- 41 PARKES, PALMER, & HODGKINSON, Sutton Works, Birmingham
Spades, shovels, forks, axes, &c.
Bêches, pelles, fourches, haches, etc.
Spaten, Schaufeln, Gabeln, Aexte etc.
Vanghe, pale, forconi, accette, ecc.

- 42 PENNEY & Co. (Limited)**, 16 Broadgate, Lincoln (Appendix, p. 155)
 Rotary corn separator, winnowing and dressing machine, &c. (at Billancourt)
Appareil rotatif pour l'épuration des grains, machine pour vanner et préparer le blé (à Billancourt)
 Centrifugale Korntrennmachine, Kornschwinge und Reinigungsmaschine etc. (zu Billancourt)
Macchina rotatoria per scegliere, ventilare, e mondar il grano, ecc. (a Billancourt)
- 43 PICKSLEY, SIMS, & Co. (Limited)**, Bedford Leigh, Lancashire (exhibit also at Billancourt)
 Agricultural machinery
Machines agricoles
 Ackerbaumaschinerie
Meccanismi agricoli
- 44 RANSOMES & SIMS, Ipswich** (exhibit also at Billancourt) (Appendix, pp. 156-163)
 Steam engines, thrashing machines, ploughs, mills, &c.
Machines à vapeur, machines à battre le blé, charrues, moulins, etc.
 Dampf- und Dreschmaschinen, Pflüge, Mühlen etc.
Motori a vapore, trebbiatoi, aratri, mulini, ecc.
- 45 THE READING IRON WORKS, Reading** (Appendix, pp. 164-5)
 Steam engines and agricultural machinery
Machines à vapeur et instruments d'agriculture
 Dampfmaschinen und Maschinerie für den Feldbau
Motori a vapore, e meccanismi agricoli
- 46 RICHMOND & CHANDLER, Salford, Manchester** (Appendix, p. 172)
 Chaff-cutting, corn-crushing machines
Haches-pailles, concasse-grain
 Maschinen zum Spreuschneiden und Kornzerquetschen
Macchine taglia-paglie, e stritolagrani
- 47 ROBEY & Co. (Limited)**, Canwick-road, Lincoln (exhibit also at Billancourt) (Appendix, pp. 166-9)
 Thrashing machines, steam engines, &c.
Machines à battre le blé, machines à vapeur
 Dresch- und Dampfmaschinen etc.
Trebbiatoi, motori a vapore, ecc.
- 48 RUSTON, PROCTOR, & Co., Sheaf Iron Works, Lincoln** (exhibit also at Billancourt)
 Thrashing machines, mills, engines, &c.
Machines à battre le blé, moulins, moteurs, etc.
 Dreschmaschinen, Mühlen, Dampfmaschinen etc.
Trebbiatoi, mulini, motori, ecc.
- 49 SAMUELSON & Co., Britannia Works, Banbury** (exhibit also at Billancourt)
 Agricultural implements
Instruments agricoles
 Ackerbaugeräthe
Utensili agricoli
- 50 SHEEN, THOMAS, Buckingham-road, Aylesbury**
 Chaff machines, tin shovels, horse hoes, &c.
Haches-pailles, pelles d'étain, hoes à cheval, etc.
 Spreuschneide-Maschinen, Zinnschaufeln, Pferdehacken etc.
Macchine taglia-paglia, pale stagnate, zappe, ecc.
- 51 SMITH, THOMAS, & SONS, Buckingham-road, Herstmonceux, Hurst-green, Sussex**
 Truck baskets, sheep-feeding cribs, &c.
Paniers de bois, crèches à moutons, etc.
 Futterkörbe, Krippen für Schafe etc.
Panieri carriuole, greggie da pecore, ecc.
- 52 SMITH, WILLIAM, Royal Iron Works, Kettering, Northamptonshire**
 Agricultural machines
Machines agricoles
 Ackerbaumaschinen
Macchine agricole
- 53 SMYTH, J., & SONS, Peasenhall, near Yoxford, Suffolk** (exhibit also at Billancourt)
 Drills, sowing machines, manure distributors
Semoirs, appareils pour la distribution des engrais
 Rill- und Säemaschinen, Apparate, um den Dünger auszubreiten etc.
Seminatori, machine seminatrici, concimatoi
- 54 SWINDELL & Co., Withymoor Works, Dudley**
 Spades, shovels, draining tools, &c.
Bêches, pelles, instruments de drainage, etc.
 Spaten, Schaufeln, Werkzeuge, um Entwässerungsgräben zu machen, etc.
Vanghe, pale, arnesi pelli scoli, ecc.
- 55 *TASKER, W., & SONS, Waterloo Iron Works, Andover**
 Portable steam engine, thrashing and dressing machine
Machine à vapeur locomobile, machine à battre et à préparer le blé
 Transportable Dampfmaschine, Dresch- und Reinigungsmaschine
Motore a vapore portatile, trebbiatoio et mondatoio
- 56 TAYLOR, FRANCIS, Church-street, Romsey Hampshire**
 Model of patent apparatus for collecting and drying human excrement into guano
Modèle d'un appareil breveté pour recueillir les résidus des centres de population et les dessécher pour engrais, etc.
 Modell eines patentirten Apparates, um menschliche Excremente zu sammeln und in Guano zu verwandeln
Modello di apparato (patentato) per raccogliere e trasformare gli escrementi umani in guano
- 57 THOMSON, R. W., 3 Moray-place, Edinburgh**
 Portable steam crane with differential rotary engine
Grue roulante à vapeur, avec machine rotatoire différentielle
 Mobiler Dampfkrahn mit Differential-Maschine mit Kreisbewegung
Gru à vapeur portatile, con motore rotatore differenziale

58 TURNER, E. R. & F., St. Peter's Iron Works, Ipswich (Appendix, p. 171)
 Agricultural engines, mills, &c.
Machines agricoles, moulins, etc.
 Ackerbaumaschinen, Mühlen etc.
Macchine agricole, mulini, ecc.

59 UNDERHILL, W. S., Newport
 Thrashing machines, horse-rakes, cultivators
Machines à battre le blé, rateaux mus par des chevaux, instruments aratoires
 Dreschmaschinen, Pferderechen, Cultivatoren
 (Eggen für Brachland)
Trebbiatoi, rastrelli a cavalli, coltivatori

60 WALLIS, HASLAM, & STEEVENS, Basing-stoke
 Thrashing machines
Machines à battre le blé
 Dreschmaschinen
Trebbiatoi

61 *WOODBOURNE, J., Park Iron Works, Kingsley, near Alton
 Agricultural implements
Instruments d'agriculture
 Ackerbaugeräthe
Utensili agrari

62 WOODS & COCKSEGE, Stowmarket, Suffolk (Appendix, p. 173)
 Agricultural implements
Instruments d'agriculture
 Ackerbaugeräthe
Utensili agrari

 Pumpen—*Pompe*

- 5 GORDONS, ALEXANDER, & CIE., Montreal
 Balances—*Balances*
 Wagen—*Bilance*

- 6 McLAREN, J. C., Montreal
 Leather belts and piping
Courroies de cuir et tuyaux
 Lederne Riemen und Schläuche
Tubi e bande di cuoio

- 7 CAMPBELL, S., Montreal
 Driving belts
Courroies de cuir
 Treibriemen
Bande comunicanti moto

CLASS LIV.

Machine Tools.

Machine-Outils.

Maschinenwerkzeuge.

Istrumenti Macchine.

(For detailed classification, see p. xxiii.)

(Voir le système de classification, p. xxiii.)

(Für detaillirte Classification, siehe Seite xxiii.)

(Vedasi il sistema di classificazione, p. xxiii.)

- 1 FROTHINGHAM & WORKMAN, Montreal
 Various kinds of tools
Outils de divers genres
 Verschiedene Werkzeuge
Varie specie di arnesi
- 2 DATE, HENRY W., Galt
 Edge tools—*Outils tranchants*
 Schneidewerkzeuge—*Arnesi taglienti*
- 3 WHITY, PHILIP, Quebec
 Patent picks for mining purposes
Pics brevetés pour le travail des mines
 Patentirte Hauen für Bergwerke
Picconi patentati per uso di miniere
- 4 FLINT, J., Ste. Catherine
 Circular and other saws
Scies circulaires et autres
 Kreis- und andere Sägen
Seghe circolari ed altre
- 5 DAWSON, JOHN, Montreal
 Planes—*Rabots*
 Hobel—*Pialle*
- 6 ABBOTT, E. E., Gananoque
 Chairs and bolts
Coussinets et chevilles
 Schwellen und Bolzen
Cuscinetti e chiavarde

- 7 MORLAND, WATSON, & CIE., Montreal
Instruments used in making saws
Objets appartenant à la confection des scies
Instrumente, zum Sägenmachen gebraucht
Strumenti usati nel fabbricar seghe

CLASS LV.

Apparatus and Processes used in
Spinning and Rope Making.
Matériel et Procédés du Filage et de la
Corderie.

Apparate, und Processe, für's Spinnen
und Seilmachen.

Apparati e Processi usati nella Filatura
e Fabbrica di Cordami.

(For detailed classification, see p. xxiii.)

(Voir le système de classification, p. xxiii.)

(Für detaillirte Classification, siehe Seite xxiii.)

(Vedasi il sistema di classificazione, p. xxiii.)

- 1 TASCHEREAU, ONSLOW, & RYAN, Quebec
Rope, cord, twine
Cordages, cordes et ficelles
Seil, Stricke, Bindfaden
Gomena, corda, spago
- 2 ELLIOTT, HUNT, & CIE., Preston
Rope, cord — *Cordes et cordages*
Seile, Stricke — *Gomena, corda*
- 3 GOODERHAM & PERINE, Streetsville
Rope, cord — *Cordes et cordages*
Seile, Stricke — *Gomena, corda*
- 4 THURSTON, EYRE, Ancaster
Cord — *Cordes*
Stricke — *Corda*

CLASS LVII.

Apparatus and Processes for Sewing
and for Making up Clothing.

Matériel et Procédés de la Couture et de
la Confection des Vêtements.

Apparate und Verfahren zum Nähen
und Kleidermachen.

Apparati e Processi usati nel Cucire e
Confezionar Abiti.

(For detailed classification, see p. xxiii.)

(Voir le système de classification, p. xxiii.)

(Für detaillirte Classification, siehe Seite xxiii.)

(Vedasi il sistema di classificazione, p. xxiii.)

- 1 GATES & CIE., Toronto
Sewing machines
Machines à coudre
Nähmaschinen
Macchine da cucire
- 2 IRWIN, C., & CIE., Belleville
Sewing machine
Machine à coudre
Nähmaschine
Macchina da cucire

- 3 RAYMOND, M., Guelph
Sewing machine — *Machine à coudre*
Nähmaschine — *Macchina da cucire*
- 4 WANGER & CIE., Hamilton
Sewing machine — *Machine à coudre*
Nähmaschine — *Macchina da cucire*
- 5 WILLIAMS, C. W., & CIE., Montreal
Sewing machine — *Machine à coudre*
Nähmaschine — *Macchina da cucire*

- 6 REED & CHILDS, Montreal
Boot-trees — *Formes à chaussures*
Schuhleisten — *Gambali e forme*

CLASS LVIII.

Apparatus and Processes used in the
Manufacture of Furniture, &c.

Matériel et Procédés de la Confection
des Objets de Mobilier et d'Habitation.

Apparate und Verfahren für die Mö-
belfabrication etc.

Apparati e Processi usati nella Fabbri-
cazione della Mobilia, ecc.

(For detailed classification, see p. xxiii.)

(Voir le système de classification, p. xxiii.)

(Für detaillirte Classification, siehe Seite xxiii.)

(Vedasi il sistema di classificazione, p. xxiii.)

- 1 BOISSONNAULT & FRECHETTE, Quebec
Rimer with keys invented and made by the
exhibitors
Bonnet à clefs inventé et exécuté par les ex-
posants
Spitzbohrer mit Schlüsseln, erfunden und
gemacht von den Ausstellern
Cerchio fesso con chiavi inventato e fatto dagli
espositori
- 2 POLLOCK & CALVERT, Montreal
Cutting out saw
Scie à découper
Säge zum Ausschneiden
Sega intagliatrice

CLASS LIX.

Apparatus and Processes used in Paper
Making, &c.

Matériel et Procédés de la Papeterie, etc.

Apparate und Verfahren für die Pa-
pierfabrication etc.

Apparati e Processi usati nella Fabbri-
cazione della Carta.

(For detailed classification, see p. xxiv.)

(Voir le système de classification, p. xxiv.)

(Für detaillirte Classification, siehe Seite xxiv.)

(Vedasi il sistema di classificazione, p. xxiv.)

- 1 BOISSONNAULT, N. F., Quebec
Patent Boissonnault paper case
Serre-forme Boissonnault breveté
Boissonnault's patentirter Papierform
Serra-forma patentato di Boissonnault

- 2 JULIEN, H., Quebec**
 Patent press for printing directions
Presse à adresses brevetée
 Patentirte Presse zum Drucken von Adressen
Torchio patentato per stampare indirizzi
- 3 CAMPBELL, J. A., Whitby**
 Machine for preparing newspapers for distribution
Machine à préparer les journaux pour distribution
 Maschine, um Zeitungen für die Austheilung vorzubereiten
Macchina per preparare i giornali per la distribuzione
- 4 RUTHVEN, JAMES, Montreal**
 Ruling pens
Plumes à rayer le papier
 Reissfedern
Penne per trigare

CLASS LXI.

Carriages and Wheelwright's Work.
Carrosserie et Charronnage.
 Kutschen und Wagnerarbeit.
Carrozze e Ruote.

(For detailed classification, see p. xxiv.)
 (Voir le système de classification, p. xxiv.)
 (Für detaillirte Classification, siehe Seite xxiv.)
 (Vedasi il sistema di classificazione, p. xxiv.)

- 1 GINGRAS, ÉDOUARD, Quebec**
 Large ornamented sledge and light sledge
Grand traîneau de luxe et traîneau léger
 Ein grosser verzierter und ein leichter Schlitten
Slitta grande da gala, e slitta leggera
- 2 GINGRAS, GODEFROY, Quebec**
 Sledge carriage
Voiture-planche
 Schlittenwagen
Carrozza-slitta
- 3 KINLEY & SAUNDERS, Ste. Catherine**
 Shaped and embossed panels for carriages
Bois découpés et gaufrés pour la confection des voitures
 Geformte und erhabene Felder für Kutschen
Riquadri sbazzati e incassati per carrozze
- 4 BRIGGS, J., Gananoque**
 Carriage springs
Ressorts de voiture
 Kutschen-Springfedern
Molle da carrozza
- 5 BYER & MATHEW, Gananoque**
 Carriage axles
Essieux de voiture
 Kutschenachsen
Sale da carrozza
- 6 GIBSON, W. H., Oakville**
 Carriage springs
Ressorts de voiture
 Kutschenspringfedern
Molle da carrozza

- 7 TAHOURHENCHÉ, PAUL, Lorette**
 Toboganes or Indian sledges
Toboganes ou trains sauvages
 Tobogane oder Indianische Schlitten
Tobogane o slitta indiana
- 8 DUNCAN, ALEXANDER, Markham**
 Swing bars
Palonniers
 Ortscheite
Balestre per tirelle

CLASS LXII.

Harness and Saddlery.
Bourrellerie et Sellerie.
 Pferdegeschirr und Sattlerwaaren.
Fornimenti da Cavalli e Sellerie.

(For detailed classification, see p. xxiv.)

 (knob-kerrie)
 Basuto-Schlachtext; Keule (Knobkerrie) der
 Eingebornen
Azza dei Basuto; knob-kerrie indigena (clava
nodosa)

5 NATAL COMMISSIONERS

Native walking sticks—*Cannes des indigènes*
 Spazierstock der Eingebornen—*Mazze indigene*

CLASS XXXVIII.

Equipment of Pioneer Colonists.
Équipement des Colons Pionniers.
 Ausrüstung der Pionier-Colonisten.
Equipaggiamento di Pionieri Colo-
nizzatori.

(For detailed classification, see p. xix.)

(Voir le système de classification, p. xix.)

(Für detaillirte Classification, siehe Seite xix.)

(Vedasi il sistema di classificazione, p. xix.)

1 CAMPBELL, H.

Model of South African wagon
Modèle de chariot de l'Afrique du Sud
 Modell eines Südafrikanischen Wagens
Modello di carriaggio Sud Africano

2 NATAL COMMISSIONERS

Reims, or straps, in common use; Thong-
 whipcord
Courroies ordinaires; cordes à fouet
 Zügel oder Riemen in gewöhnlichem Ge-
 brauch; Peitschenschnur
Redini, o coregge in uso ordinario; corda di
frusta in cuoio

3 PATERSON, P., Colonial Engineer

Model of waggon-wheel
Modèle de roue de chariot
 Modell eines Wagenrades
Modello di ruota di carro

4 PATERSON, P., Colonial Engineer

Model of ox-yoke
Modèle d'attelage de bœufs
 Modell eines Ochsenjoches
Modello di giogo da bovi

5 NATAL COMMISSIONERS

Models of apparatus used in yoking oxen
Modèle d'appareils pour atteler les bœufs
 Modell des Geschirres zum Anspannen der
 Ochsen
Modelli di apparati usati nell'aggiungere i bovi

GROUP V.—CLASS XL.

Rocks, Ores, Earths, and Clay.
Roches, Minerais, Argiles, etc.
 Gesteine, Erze, Erden und Thon.
Rocce, Minerali, Terre, e Argille.

(For detailed classification, see p. xix.)

(Voir le système de classification, p. xix.)

(Für detaillirte Classification, siehe Seite xix.)

(Vedasi il sistema di classificazione, p. xix.)

1 OSBORNE, M.; PATERSON, C., Colonial En-
gineer

Natal coal—*Houille de la colonie*
 Natakohle—*Carbon fossile di Natal*

2 BAZELEY, F.; BUCHANAN, D. D., JUN.; ES-
COMBE; ADLER J.; SUTHERLAND, P.; STAIN-
BANK, H. E.; SANDERSON, J.

Steatite, rough and polished
Stéatite brute et polie
 Speckstein, roh und polirt
Steatite grezzo e lustrato

3 SUTHERLAND, P., Surveyor-General

Metamorphic limestone (statuary marble)
Pierre calcaire métamorphique (marbre sta-
tuaire)
 Urkalkstein (Statuen-Marmor)
Calcarea metamorfica (marmo statuario)

4 ROSS, J. G.; SINCLAIR, C. R.

Iron ore—*Minerai de fer*
 Eisenstufe—*Minerale di ferro*

5 SUTHERLAND, P., Surveyor-General

Copper rod and casting (Kaffir manufacture)
Barre de cuivre et fonte (manufacture du pays)
 Kupfer in Stäben und gegossen (Production
 der Kaffern)
Rame in barra e fuso (manifattura Caffra)

6 SUTHERLAND, P., Surveyor-General

Carbonate of copper—*Carbonate de cuivre*
 Kohlensaures Kupfer—*Carbonato di rame*

7 BARNES, A. M.; COOKE, J. M.

Lead from the Transvaal
Plomb tiré du Transvaal
 Blei von Transvaal—*Piombo dal Transvaal*

8 WILDER, H. A.

River quartz—*Quartz de rivière*
 Flussquarz—*Quarzo del fiume*

9 MIDDLETON, W. H.

Clay—*Argile*—Thon—*Argilla*

10 SUTHERLAND, P.; SANDERSON, J.; VAUSE, R.

Fossil wood—*Bois fossile*
 Versteintes Holz—*Legno fossile*

11 SMITH, JESSE

Granite—*Granit*—Granite—*Granito*

12 EASTWOOD, G. T.

Variegated stone—*Pierre jaspée*
 Bunter Stein—*Pietra variegata*

13 SMITH, JESSE

Shale-polishing, building and flooring
Schiste poli pour constructions et planchers
 Polierschiefer, Dachschiefer und Platten
Lustro, costruzione e pavimento di schisto

14 TARBOTON, D. H.

Millstone grit—*Grès à meule*
 Millstone Grit oder Kohlensandstein
Tritello di mola

15 SIXTEEN CONTRIBUTORS

24 varieties of fertile soil
24 spécimens de terres fécondes
 24 Varietäten von fruchtbarem Erdboden
24 varietà di terreni fertili

CLASS XLI.

Different kinds of Trees.

Bois Divers.

Verschiedene Holzarten.

Differenti Specie d' Alberi.

(For detailed classification, see p. xx.)

(Voir le système de classification, p. xx.)

(Für detaillirte Classification, siehe Seite xx.)

(Vedasi il sistema di classificazione, p. xx.)

1 SHAW BROTHERS

Native wood, 23 kinds

Bois indigènes, 23 espèces

Einheimisches Holz, 23 Arten

Legni indigeni, 23 specie

2 PATERSON, P., Colonial Engineer

Native wood, 18 kinds

Bois indigènes, 18 espèces

Einheimisches Holz, 18 Arten

Legni indigeni, 18 specie

3 RUSSEL & Co.

Native wood—*Bois indigène*Einheimisches Holz—*Legni indigeni*

4 LANDSBERG, E.; HOHL, —; MCKEN, J.;

CATO, G. C.; VAUSE, R.; BAKER, W. G.; METH-

LEY, J. E.; GLEGG, H. R.; GREEN, L. H.,

Amanzimtote Mission Station

Native wood, sundry varieties

Bois indigènes, plusieurs espèces

Einheimisches Holz, verschiedene Arten

Legni indigeni, parecchie varietà

CLASS XLII.

Animals, Birds' Eggs, Skins, Horns.

*Animaux, Œufs d'Oiseaux, Peaux,**Cornes.*

Thiere, Vögeleier, Häute, Hörner.

Animali, Uova di Uccelli, Pelli, Corna.

(For detailed classification, see p. xx.)

(Voir le système de classification, p. xx.)

(Für detaillirte Classification, siehe Seite xx.)

(Vedasi il sistema di classificazione, p. xx.)

1 DAVIS, W.

Lion skins, from beyond the border

Peaux de lions d'au-delà de la frontière

Löwenhäute von der anderen Seite der

Grenze

Pelli di leone, d' oltre i confini

2 BAKER, W. G.

Antelope skins, koodoo, waterbock, gemsbock

Peaux d'antilopes, de koodoo, de waterbock, de gemsbock

Antelopenhäute, Koodoo-, Wasser- und Gems-

bock

*Pelli d' antelope, di koodoo, waterbock, gems-**bock*

3 BAKER, W. G.

Fleece of Angora lamb

Toison d'agneau Angora

Fliess (Schurwolle) eines Angora-Lammes

Vello di d' angello Angora

4 ESCOMBE, ADLER J.; BENINGFIELD, S.; NATAL COMMISSIONERS

Sea-cow skulls and tusks

Crânes et défenses de vaches marines (morse)

Schädel und Haizähne einer Seekuh

Crani e zanne di vacca marina

5 EASTWOOD, G. F.; SANDERSON, J.; NATAL COMMISSIONERS

Wild boar skulls and tusks

Crânes et défenses de sangliers

Schädel und Fänge vom Eber

Crani e zanne di cignale

6 BAKER, W. G.; BUCHANAN, D. D.; NATAL COMMISSIONERS

Rhinoceros horns, from beyond the border

Cornes de rhinocéros d'au-delà de la frontière

Rhinoceroshorn, von der andern Seite der

Grenze

Corna di rinoceronte d' oltre i confini

7 FELLOWES, COL.; BAKER, W. G.; NATAL COMMISSIONERS

Buffalo horns—*Cornes de buffle*Buffalo-Hörner—*Corna di bufalo*

8 BAKER, W. G.; FELLOWES, COL.; HENDERSON, J.; MANN, R. J., M.D.; NATAL COMMISSIONERS

Koodoo horns—*Cornes de koodoo*Koodoo-Hörner—*Corna di gazella koodoo*

9 BAKER, W. G.

Horns of gnu—*Cornes de gnu*Gnu-Hörner—*Corna di ippocervo gnu*

10 BAKER, W. G.

Gemsbock horns—*Cornes de gemsbock*Gemsbock-Hörner—*Corna digemsbock*

11 HENDERSON, J.; BAKER, W. G.

Waterbock horns, Leeche

Cornes de waterbock, Leeche

Wasserbock-Hörner

Corna di waterbock, Leeche

12 HENDERSON, J.

Zwarte-wit-pens-bock horns

Cornes de Zwarte-wit-pens-bock

Zwarte-wit-pens-Bock-Hörner

Corna di Zwarte-wit-pens-bock

13 HENDERSON J.; NATAL COMMISSIONERS

Elands' horns

Cornes d'élans

Elands-Hörner

Corna di buselafu eland

14 BAKER, W. G.

Hantebeeste horns

Cornes de Hantebeeste

Hantebeeste-Hörner

Corna di Hantebeeste

15 BAKER, W. G.

Rooi-bock horns

Cornes de Rooi-bock

Rooi-Bock-Hörner

Corna di Rooi-bock

16 BAKER, W. G.

Springbock horns—*Cornes de spring-bock*

Springbock-Hörner

Corna di gazella springbock

17 NATAL COMMISSIONERS

Steinbock horns
Cornes de steinbock
 Steinbock-Hörner
Corna di stambecco

18 NATAL COMMISSIONERS

Rietbock horns
Cornes de rietbock
 Rietbock-Hörner
Corna di rietbock

19 NATAL COMMISSIONERS; MANN, R. J., M.D.

Antelope horns, various
Cornes d'antilopes, diverses
 Antelopen-Hörner, verschiedene
Corna di antelope varie

20 NATAL COMMISSIONERS

Skulls and bones of native animals
Crânes et os d'animaux naturels
 Schädel und Knochen einheimischer Thiere
Crani e ossa di animali indigeni

21 BAKER, W. G.

Leg bones of giraffe, head of bustard
Os des pattes de giraffe, tête d'outarde
 Beinknochen der Giraffe, Kopf eines Trappen
Tibie di giraffa, testa di ottarda

22 BAKER, W. G.

Ostrich feathers
Plumes d'autruche
 Straussfedern
Penne di struzzo

23 MANN, R. J., M.D., Superintendent of Education

Skins of smaller native birds
Peaux des petits oiseaux naturels
 Häute von kleineren einheimischen Vögeln
Pelli di minori uccelli indigeni

24 MIDDLETON, H. C. & S.; GUEINZIUS, W.

Natal insects
Insectes de la colonie
 Insecten von Natal
Insetti di Natal

25 GUEINZIUS, W.; MCKEN, J.; HAGENIUS, H.

Natal shells
Coquilles de la colonie
 Muscheln von Natal
Conchiglie di Natal

26 CLARENCE, R.

Nest of white ant
Nid de termite
 Nest von weissen Ameisen
Nido di formica bianca

27 JAMES, T. P.; CLARENCE, R.

Skins of snake and galago
Peaux de serpent et de galago
 Häute von einer Schlange und eines Galago
Pelli di serpe e di galago

CLASS XLIII.

Cotton, Flax, Hemp, Wool, Silk Fibres;
 Tobacco, Oils, and Tanning Substances.

Fibres de Coton, Lin, Chanvre, Laine et Soie. Tabac, Huiles et Matières Tannantes.

Baumwolle, Flachs, Hanf, Wolle, Seidenfasern; Tabak, Oel und Gerbstoffen.

Cotone, Lino, Canapa, Lana, Fibre Seriche; Tabacco, Oli, e Sostanze tannine.

(For detailed classification, see p. xx.)

(Voir le système de classification, p. xx.)

1 BOURDILLAUT, MRS.

Manufactured furs—*Fourrures confectionnées*
Verarbeitete Pelze—*Pelliccie manifatturate*

2 WITBROW, J.

Men's clothes—*Habits d'hommes*
Kleider für Männer—*Vesti da uomo*

CLASS XXXVIII.

Travelling Articles and Camp Equipage.

Objets de Voyage et de Campement.

Gegenstände für die Reise und das Feldlager.

Oggetti per Viaggio ed Equipaggio da Campo.

(For detailed classification, see p. xix.)

(*Voir le système de classification, p. xix.*)

(Für detaillirte Classification, siehe Seite xix.)

(*Vedasi il sistema di classificazione, p. xix.*)

1 STARR & SONS

Implements for geologists
Isntruments pour géologues
Geologische Geräthe
Attrazzi per geologi

GROUP V.—CLASS XL.

Mining and Metallurgy.

Produits de l'Exploitation des Mines et de la Métallurgie.

Berg- und Hüttenproducte.

Miniere e Metallurgia.

(For detailed classification, see p. xix.)

(*Voir le système de classification, p. xix.*)

(Für detaillirte Classification, siehe Seite xix.)

(*Vedasi il sistema di classificazione, p. xix.*)

1 ACADIA CHARCOAL IRON COMPANY

Ores, pig, bars, cutlery, &c.

Minerais, fer en gueuses, en barres, coutellerie
Erze, Eisensau, Stäbe, Messerschmiedewaaren
etc.

Minerali, in pane, in barre, coltellineria, ecc.

2 ARCHBOLD, EDWARD P.

Column of coal from Little Glace Bay Mines

Colonne de charbon des houillères Little Glace Bay

Eine Säule aus Kohle von den Little-Glace-Bai-Gruben

Colonna di carbon fossile delle miniere di Little Glace Bay

3 ARCHIBOLD, HON. S. D.

Column of coal from Gowrie Mines

Colonne de charbon des houillères de Gowrie

Eine Säule aus Kohle von den Gowrie-Gruben

Colonna di carbon fossile delle miniere di Gowrie

4 BARNES, WILLIAM

Collection of carboniferous fossils; brown hæmatite from Brookfield

Collection de fossiles carboneuses; hématite brune de Brookfield

Eine Fossilienammlung aus der Kohlenformation; Brauneisenstein von Brookfield

Collezione di fossili carboniferi; ematite bruna di Brookfield

5 BELLONI, ROBERT

Column of coal from Cow Bay Mines

Colonne de charbon des houillères de Cow Bay

Eine Säule aus Kohle von den Cow-Bai-Gruben

Colonna di carbon fossile delle miniere di Cow Bay

6 BILL & SKERRY

Axes—*Haches*

7 DUVAR, H.

Manganese—*Manganèse*

Mangan—*Manganese*

8 GENERAL MINING ASSOCIATION (R. H. BROWN, Agent)

Column of coal from Sydney Mines
Colonne de charbon des houillères de Sydney
 Eine Kohlensäule von den Sydney-Gruben
Colonna di carbon fossile delle miniere di Sydney

9 GENERAL MINING ASSOCIATION (James Hudson, Agent)

Column of coal from Albion Mines
Colonne de charbon des houillères Albion
 Eine Kohlensäule von den Albion-Gruben
Colonna di carbon fossile delle miniere di Albion

10 HAMILTON, P. S. (Gold Commission)

Collection of nuggets and auriferous quartz from the various gold fields of Nova Scotia
Collection d'or et de quartz aurifères des divers gîtes aurifères de la Nouvelle Écosse
 Eine Sammlung von Gold und goldführendem Quarz aus den verschiedenen Goldgruben Nova Scotia's

Collezione di blocchetti d'oro, e di quarzi auriferi delle varie miniere della Nova Scozia

11 HONEYMAN, DAVID, D.C.L.

Collection of rocks, minerals, ores, and fossils, with maps and sections illustrating the geology of Nova Scotia

Collection de roches, minéraux, minerais et fossiles, avec cartes et coupes, résumant la géologie de la Nouvelle Écosse

Eine Sammlung von Felsarten, Mineralien, Erzen und Fossilien, mit Karten und Durchschnitten zur Erklärung der geologischen Formation von Nova Scotia

Collezione di rocce, minerali, minerali metalliche e fossili, con mappe e profili illustrativa della geologia della Nova Scozia

12 HOW, HENRY, D.C.L.

Collections of minerals and ores, scientific and economic, illustrating the mineralogy of Nova Scotia

Collections de minéraux et de minerais pour les usages scientifiques et industrielles, résumant la minéralogie de la Nouvelle Écosse

Sammlungen von Mineralien und Erzen, wissenschaftlich und öconomisch, zur Erklärung der Mineralogie von Nova Scotia

Collezione di minerali, minerali metallici scientifica ed economica, illustrative della mineralogia della Nova Scozia

13 JACKSON, JAMES W.

Oil coal and oil from the Albion coal-fields
Bitume et huiles des houillères Albion
 Oelkohle und Oel von den Albion-Kohlfeldern
Carbon fossile oleifero e olio delle miniere di carbon fossile di Albion

15 MURRAY, ROBERT

Manganese—*Manganèse*
 Mangan—*Manganèse*

16 NASH, JOHN D.

Manganese—*Manganèse*
 Mangan—*Manganèse*

17 OXLEY, J. B.

Brown hæmatite and specular iron ore
Hématite brune, et minéral de fer spéculaire
 Braun- und Rotheisenstein
Ematite scura e metallo di ferro speculare

18 PETERS, HENRY

Collection of building stones
Collections de pierres de construction
 Sammlung von Bausteinen
Collezioni di pietre da costruzione

18A POOLE, HENRY

Coal—*Houille*
 Kohle—*Carbonfossile*

19 STARR, D. H., & SONS

Patent skates and mining implements
Patins brevetés, et outils pour l'exploitation des mines
 Patentirte Schlittschuhe und Bergbaugeräthe
Pattini patentati e arnesi per miniere

20 SUTHERLAND, WILLIAM

Specimens of limestone from Cherta Basin
Spécimens de pierre calcaire de Cherta Basin
 Exemplare von Kalkstein vom Cherta Basin
Saggi di calcarea dal Bacino di Cherta

21 WEBSTER, MRS.

Collection of minerals—*Collection de minéraux*
 Sammlung von Mineralien
Collezione di minerali

21A WESLEY & SANDFORD

Marbles—*Marbres*
 Marmor—*Marmo*

22 WOOD, JAMES J.

Polished anhydrite—*Anhydrite polie*
 Polirter Anhydrit—*Anidrito lustrato*

CLASS XLI.

Products of the Cultivation of Forests and of the Trades appertaining thereto.

Produits des Exploitations et des Industries Forestières.

Producte der Waldcultur und der dazu gehörigen Gewerbe.

Prodotti della Cultura della Foreste e Industrie che vi attengono.

(For detailed classification, see p. xx.)

(Voir le système de classification, p. xx.)

(Für detaillirte Classification, siehe Seite xx.)

(Vedasi il sistema di classificazione, p. xx.)

1 DEXTER, J.

Specimens of wood for cabinet work and building purposes

Spécimens de bois pour l'ébénisterie et pour les constructions

Exemplare von Holz für Kunstschreinerei und für Bauten

Saggi di legni per stipetteria ed usi di costruzione

2 WIER, BENJAMIN

Railway sleepers—*Traverses de chemin de fer*
 Eisenbahnschwellen—*Traverse da ferrovia*

3 HOW, HENRY, D.C.L.

Collection of Nova Scotia dried plants
Collection de plantes sèches de la Nouvelle Écosse
 Sammlung getrockneter Pflanzen von Nova Scotia
Collezione di piante secche di Nova Scozia

4 CUTLER, MRS. ELIZABETH

Collection of Nova Scotia grasses
Collection des graminées de la Nouvelle Écosse
 Sammlung der Gräser Nova Scotia's
Collezione di erbe di Nova Scozia

5 MCCURDY, MISS ELIZABETH

Collection of Nova Scotia grasses
Collection des graminées de la Nouvelle Écosse
 Sammlung der Gräser Nova Scotia's
Collezione di erbe di Nova Scozia

6 SAMPSON, MRS.

Collection of grasses
Collection des graminées
 Grassammlung
Collezione di erbe

CLASS XLII.

Products of Shooting and Fishing, &c.,
 and of the Earth obtained without
 Cultivation.

Produits de la Chasse, de la Pêche et des Cueillettes.

Producte der Jagd, des Fischfangs
 etc. und der Erde, erhalten ohne
 Cultur.

*Prodotti della Cuccia, della Pesca, ecc.,
 e della Terra.*

(For detailed classification, see p. xx.)

BREARLY BROS., Melbourne—*Leather for soles*
 ALDERSON, Australia—*Leather*
 DUGAL, P., Quebec—*Leather*

GROUP VI.

Apparatus and Processes used in the Common Arts.

CLASS XLVII.

Apparatus and Processes of the Art of Mining and Metallurgy.

HORS CONCOURS.

MUSEUM OF PRACTICAL GEOLOGY AND ROYAL SCHOOL OF MINES—*Model of machinery for making steel by Bessemer's process*
 CAPTAINS BEAUMONT AND LOCOCK, London [Captain Beaumont, Associate Juror]—*Rock-boring Machine*

SILVER MEDALS.

CARRETT, MARSHALL, & Co., Leeds—*Coal cutting machine*
 JONES & LEVICK, Blaina—*Coal cutting machine*

BRONZE MEDALS.

BICKFORD, SMITH, & Co., Tuckingmill—*Safety fuses*
 TOWLER & Co., London—*Block*

HONOURABLE MENTION.

SYMONDS & Co., Nova Scotia—*Crushing machine*

CO-OPÉRATEUR.

BRONZE MEDAL.

JORDAN, THOMAS BROWN, London—*Execution of a model exhibited by the Museum of Practical Geology*

CLASS XLVIII.

Agricultural Apparatus, &c.

GOLD MEDALS.

HOWARD, J. & F., Bedford—*Ploughs, and various agricultural machinery*
 CLAYTON, SHUTTLEWORTH, & Co., Lincoln—*Portable and traction engines, and thrashing machines*
 FOWLER, J., & Co., London—*Steam plough*
 GARRETT, R., & SONS, Leiston Works—*Portable engine, agricultural machinery*
 RANSOMES & SIMS, Ipswich—*Portable engine, agricultural machinery*
 HORNSBY, R., & SONS, Grantham—*Portable engine, thrashing machine, reapers*

SILVER MEDALS.

AVELING & PORTER, London—*Traction engine*
 BENTALL, E. H., Heybridge—*Agricultural implements*
 SAMUELSON & Co., Banbury—*Agricultural implements*

MARSHALL, SONS, & Co. (Limited) Gainsborough—*Portable engine and thrashing machine*
 RICHMOND & CHANDLER, Salford—*Chaff and corn cutting machines*
 ROBEY & Co. (Limited), Lincoln—*Portable engine, thrashing machine*
 TURNER, E. R. & F., Ipswich—*Agricultural machines, locomotive*
 COLEMAN & MORTON, Chelmsford—*Agricultural machinery*
 PICKSLEY, SIMS, & Co. (Limited), Bedford-leigh—*Agricultural machinery*
 READING IRON WORKS, Reading—*Steam machinery and agricultural implements*
 PENNEY & Co. (Limited), Lincoln—*Winnowing machine*
 SMYTH, J., & SONS, Peasenhall—*Sowing machines and manure distributors*

BRONZE MEDALS.

NICHOLSON, W. N., Newark—*Agricultural machines*
 RUSTON, PROCTOR, & Co., Lincoln—*Portable engine, thrashing machines, and agricultural implements*
 SMITH, WM., Kettering—*Agricultural machines*
 WALLIS, HASLAM, & STEEVENS, Basingstoke—*Thrashing machines*
 WOODS & COCKSEGE, Stowmarket—*Agricultural implements*
 ASHEY & JEFFERY, Stamford—*Agricultural implements*
 BAMLETT, A. C., Thirsk—*Reaping and mowing machines*
 KEARSLEY, HENRY & GEORGE, Ripon—*Reaping and mowing machines*

HONOURABLE MENTION.

AMIES, BARFORD, & Co., Peterborough—*Agricultural implements*
 DUNCAN, A., Canada—*Ploughs*
 UNDERHILL, W. S., Newport—*Thrashing machines, horse rakes, cultivators*
 BALL, W., & Son, Rothwell—*Agricultural implements*
 MORGAN, J. & G., Canada—*Extirpators*
 BROWN, W., & MAY, C. N., Devizes—*Thrashing machines and steam engines*
 FOX, WALKER, & Co., Bristol—*Portable steam engine*
 PARKES, PALMER, & HODGKINSON, Birmingham—*Agricultural implements (spades, shovels, etc.)*
 PATERSON, BROTHERS, Canada—*Winnowing machine and straw-cutter*

CO-OPÉRATEURS.

BRONZE MEDALS.

BOUSFIELD, E., Bedford, manager, Messrs. Howard
 BIDDEL, G., Ipswich, manager, Ransomes & Sims
 GREIG, D., London, manager, J. Fowler & Co.
 WILKINSON, GEORGE, Lincoln, manager, Clayton, Shuttleworth, & Co.

CLASS XLIX.

Apparatus used in Shooting, Fishing,
&c.

HORS CONCOURS.

COMMISSIONERS OF IRISH FISHERIES, Dublin—
Models of salmon ladders

SILVER MEDALS.

STUART, J. & W., Musselburgh—*Nets* (Class 33)
KIRBY, BEARD, & Co., London and Paris—*Fish
hooks* (Class 40)

ALDRED, THOS., London—*Fishing rods and lines*

BRONZE MEDALS.

MILWARD, HENRY, & Sons, Redditch—*Fish
hooks* (Class 40)

BARTLEET, WILLIAM, & Sons, Redditch—*Fish
hooks* (Class 40)

HONOURABLE MENTION.

RYDER, WM. H., Birmingham—*Fishing reels*
BUCHANAN, JAMES, Glasgow—*Fish hooks*

CLASS L.

Apparatus and Processes used in Agri-
cultural Works and in Works for the
Preparation of Food.

HORS CONCOURS.

ADMIRALTY, London—*Cooking apparatus and
specimens of food used in the Royal Navy*

SILVER MEDALS.

ATMOSPHERIC CHURN COMPANY, London—
Apparatus for making butter

CLAYTON, H., & Co., London—*Machines for
brick making*

BRADFORD, T., & Co., London—*Washing and
drying machines*

SPENCER, THOMAS, London—*Filters*

BRONZE MEDALS.

COLLIER, LUKE, Rochdale—*Confectioners' ma-
chines*

FLEET, E., & Co., London—*Apparatus for
making soda water; corking machine*

KENT, GEORGE, London—*Apparatus for pastry-
cooks and confectioners*

LYON, A., London—*Mincing and sausage making
machines*

PONTIFEX, H., & Sons, London—*Apparatus for
brewers and distillers*

ROBINSON, WILLIAM, Bridgwater—*Barrel-
cleaning machine*

SILICATED CARBON FILTER Co., London—*Filters
and water purifiers*

TYE, JOHN, Lincoln—*Machinery for flour mills*

PERKINS, LOFTUS, London—*Military portable
oven* (Class 24)

HONOURABLE MENTION.

BARNETT, S., London—*Apparatus for the manu-
facture of mineral waters*

BAWDEN, P., London—*Brick-making machine*
CANADIAN WASHING MACHINE AND AGRICUL-
TURAL IMPLEMENT Co. (Limited), Worcester
—*Washing machine*

CLARKE & DUNHAM, London—*Millstones and
machinery for flour mills*

FARROW & JACKSON, London—*Iron wine bins
and bar fittings*

KEITH, GEORGE, London—*Patent ice safes, and
freezing powders*

SUMMERSCALES, W., & Sons, Keighley—*Wash-
ing, wringing, and mangling machines*

WENHAM LAKE ICE Co., London—*Refrigerators*
WHITMÉE, J., & Co., London—*Corn mills and
ventilating incubators*

WILLIAMSON, W., London—*Scouring, washing,
and calendering machines*

HICKLING, W. E., Leicester—*Bottle-washing
machine* (Class 60)

CARSON & TOONE, Warminster—*Dairy utensils*
(Class 48)

CLASS LI.

Apparatus used in Chemistry, Phar-
macy, and in Tanyards.

GRAND PRIX.

SIEMENS, C. W., London—*Regenerative gas
furnace* (Class 65)

GOLD MEDAL.

JOHNSON, MATTHEY, & Co., London—*Platinum
process*

SILVER MEDALS.

COX, STEPHEN (Stothert & Pitt, the Exhibitors
and Manufacturers of the Machine)—*Tan-
ning process*

PATENT PLUMBAGO CRUCIBLE Co., London—
Plumbago crucibles (Class 47)

BRONZE MEDAL.

PORTER, J. T. B., & Co., Lincoln—*Production
of gas by petroleum*

HYNAM, JOHN, London—*Plumbago crucibles*
(Class 47)

DOULTON & WATTS, London—*Plumbago crucibles
and fire-resisting vases* (Class 47)

HONOURABLE MENTION.

KENT, GEORGE, London—*Mixing machines*
(Class 50)

BOWER, GEORGE, St. Neots—*Gas apparatus*
CLIFF, JOSEPH, & Son, Wortley, Leeds—*Fire-
clay retorts*

HUXHAMS & BROWN, Exeter—*Bark mill*
CARR, THOMAS, Bristol—*Patent disintegrator*
WILSON, JAMES, London—*Hydraulic centre valve
for gas purifiers*

BAKER, WILLIAM J., Wakefield—*Improved gas
apparatus*

TYLER, JOHN H., London—*Apparatus used in
tan-yards*

CLASS LII.

Prime Movers, Boilers, Engines, &c.,
specially adapted to the require-
ments of the Exhibition.

SILVER MEDALS.

PORTER, C. T., Manchester—*Horizontal steam
engine*

GALLOWAY, W. & J., & Sons, Manchester—*Boilers and horizontal steam engine*
 DONKIN, B., & Co., London—*Steam pipes and shafting*
 HICK, HARGREAVES, & Co., Bolton—*Horizontal steam engine*
 FOX, WALKER, & Co., Bristol—*Horizontal steam engine*
 SHANKS, A., & SON, London—*Steam crane*
 APLEYBROTHERS, London—*Steam crane*
 RUSSELL, G., & Co., Glasgow—*Steam crane*
 TAYLOR, JAMES, & Co., Birkenhead—*Steam crane*
 STOTHERT & PITT, Bath—*Steam crane*

BRONZE MEDALS.

SHARP, STEWART, & Co. (Limited), Manchester—*Improved 'Giffard' injector*
 APLEYBROTHERS, London—*Feeders for boilers*

CLASS LIII.

Machines and Apparatus in General.

GOLD MEDAL.

MERRYWEATHER & SONS, London—*Steam fire engines*

SILVER MEDALS.

CARRETT, MARSHALL, & Co., Leeds—*Steam pump*
 DONKIN, B., & Co., London—*Patent horizontal steam engine*
 EADES, W., & SON, Birmingham—*Patent pulley blocks*
 GLOVER, G., & Co., London—*Patent dry gas meters, national standard gasometer*
 GLOVER, THOS., London—*Dry gas meters*
 GWYNNE, & Co., London—*Centrifugal pump*
 LLOYD, CHARLES, London—*Blow fan*
 POOLEY, H., & SONS, Liverpool—*Automatic grain-scale* (Class 63)
 READING IRON WORKS, Reading—*Steam engine* (Class 48)
 SHAND, MASON, & Co., London—*Steam fire engine*
 TANGYE BROTHERS, Birmingham—*Machine for lifting, pulley tackle*
 WESTON, T. A., Birmingham—*Hoisting apparatus*

BRONZE MEDALS.

BAINES, W. N., Glasgow—*Brass fittings for steam engines and boilers*
 ELECTRO-MAGNETIC AND ELECTRO PLATE Co. (Limited), Birmingham—*Electro-motive engine*
 NORTH MOOR FOUNDRY CO., Oldham—*Turbines, centrifugal pumps, fans, etc.*
 DEFRIES, NATHAN, London—*Dry gas meters*
 GAS METER CO., London—*Gas and water meters*
 GREEN, E., & SON, Wakefield—*Fuel economiser for steam boilers*
 KENNEDY'S PATENT WATER METER CO. (Limited), Kilmarnock—*Water meter*
 MARSHALL, SONS, & Co., Gainsborough—*Locomotive machine* (Class 48)
 PAUL, MATTHEW, & Co., Dumbarton—*Steam winch for ship's deck*

ROYAL SOCIETY FOR THE PROTECTION OF LIFE FROM FIRE—*Fire escape*

SUGG, W., London—*Gas meter* (Class 24)

WEST & GREGSON, Oldham—*Gas and water meters*

WILLIAMSON BROTHERS, Kendal—*Ventilator*

HONOURABLE MENTION.

BASTIER, JEAN U., London—*Patent chain pump*
 BERNAYS, J., London—*Improved patent centrifugal pump*

CAMPBELL, S., Canada—*Belts for machinery*
 LONDON & WESTMINSTER METER CO., London—*Water and gas meters*

DENISSON—*Pulley, weighing machine*

DEWRANCE, J., & Co., London—*Pressure gauge*
 DUCKAM, H. A. F., London—*Gas meter* (Class 24)

HILL, J. C., & Co., Newport—*Rotary steam engine*

LAMBERT, T., & SONS, London—*Fittings for pumps and valves*

LEONI, SIGISMUND, London—*Taps*

MACLAREN, J. C., Canada—*Belts*

NEWTON & BRADDOCK, Oldham—*Dry gas meter*

SWANN, J. R., Edinburgh—*Patent safety-valve for steam boilers*

THOMSON, R. W., Edinburgh—*Differential rotary steam engine*

WARNE, T., & Co., London—*India-rubber fittings* (Class 44)

CO-OPÉRATEURS.

SILVER MEDAL.

FOWKE, CAPT., R.E. (the late)—*Fire engine*

BRONZE MEDAL.

WILKINSON, GEORGE, Lincoln, foreman, Clayton & Shuttleworth, & Co.

CLASS LIV.

Machine Tools.

GRAND PRIX.

WHITWORTH CO. (Limited), Manchester—*Machine tools*

GOLD MEDALS.

SHARP, STEWART, & Co. (Limited), Manchester—*Workshop tools*

SHEPHERD, HILL, & Co., Hunslet—*Self-acting machine tools*

SILVER MEDALS.

DAVIES, D., Crumlin—*Steam striker*

THWAITES & CARBUTT, Bradford—*Steam hammers*

WORSSAM, SAMUEL, & Co., London—*Wood-working machine*

DE BERGUE, C., & Co., London—*Punching and shearing machines*

TANNETT, WALKER, & Co., Leeds—*Steam hammer*

BRONZE MEDALS.

NEILSON BROTHERS, Glasgow—*Patent radial drill*

POWIS, JAMES, & Co., London—*Wood-working machines*

MASSEY, B. & S., Manchester—*Steam hammer and steam oliver*

POWIS, C., & Co., London—*Saw mill machinery*
 WHITEHEAD, JOHN, Preston — *Brick-making machine* (Class 50)
 ROBINSON, T., & SON, Rochdale—*Wood-working machinery*
 BASS, J. G., & Co., Workington—*Nail forging machine*

HONOURABLE MENTION.

EASTERBROOK & ALLCARD, Sheffield—*Engineers' hand tools*
 SKETCHLEY, WILLIAM, Weymouth—*Wood-cutting machine*
 RHODES, J., & SONS, Wakefield—*Machine tools*

CLASS LV.

Apparatus and Processes used in Spinning and Rope-making.

GOLD MEDALS.

LAWSON, S., & SONS, Leeds—*Flax spinning machinery*
 PLATT, BROS., & Co., Oldham—*Cotton spinning machinery*

SILVER MEDALS.

WREN & HOPKINSON, Manchester—*Machines for winding*
 COMBE, J., & Co., Belfast—*Flax machinery*
 BROOK, J., & BROTHERS, Huddersfield—*Machine for winding sewing cotton*
 HORSEFALL, WM., Manchester—*Cards and patent card grinder*
 SMITH, JOHN & SAMUEL, Keighley — *Looms* (Class 56)

BRONZE MEDALS.

BOOTH, H., & Co., Preston—*Spindles and flyers*
 DIXON, J., & SONS, Steeton—*Keys, treenails, bobbins, rollers, &c.*
 IRVIN & SELLERS, Preston—*Detached pieces of spinning and weaving machinery, shuttles, bobbins, etc.* (Class 56)
 LEONI, SIGISMUND, London—*Spinning machine*
 WATKINS, T., Bradford—*Porcelain spinning guides, washers, &c.*

HONOURABLE MENTION.

HODGKIN, JOHN E., West Derby—*Flax breaking and scutching machinery*
 MALLINSON, KNAPTON, & Co., Wortley—*Card clothing*

CO-OPÉRATEUR.

BRONZE MEDAL.

FITTON, E. G., Leeds—*Inventor of a movement applicable to carding at S. Lawson & Sons' factory*

CLASS LVI.

Apparatus and Processes used in Weaving.

GOLD MEDAL.

HOWARD & BULLOUGH, Accrington—*Weaving looms* (Class 55)

LEEMING, J., & SONS, Bradford—*Power looms*
 HODGSON, G., Bradford—*Looms*

SILVER MEDALS.

KEIGHLEY, J., & Co., Bradford—*Looms for weaving worsted*
 PARKER, C., & SON, Dundee—*Weaving machinery*
 HATTERSLEY, G., & SONS, Keighley—*Power looms*
 SMITH, W., & BROTHERS, Heywood—*Looms and dressing machines*
 HALL, ROBERT, Bury—*Power looms*

BRONZE MEDALS.

FERRABEE, JAMES, Brinscombe — *Bobbin-making machine* (Class 55)
 SOWDEN & STEPHENSON, Bradford — *Power looms*
 COOK & HACKING, Bury—*Looms*
 URQUHART, LINDSAY, & Co., Dundee—*Patent power loom*

HONOURABLE MENTION.

INGHAM, J., & SONS, Thornton—*Shuttles*
 SALTER, SAMUEL, & Co., Market Drayton — *Portable steam shrinking machine*

CLASS LVII.

Apparatus and Processes for Sewing and Making-up Clothing.

SILVER MEDALS.

THOMAS, W. F., & Co., London—*Sewing machines*
 WANZER SEWING MACHINE Co., London—*Sewing machines*

BRONZE MEDALS.

SIMPSON, R. E., & Co., London—*Sewing machines*
 EUROPEAN SEWING MACHINE Co., Coventry—*Sewing machines*
 WILSON, NEWTON, & Co., London—*Sewing machines*

HONOURABLE MENTION.

PITT, BROTHERS, Cleckheaton—*Sewing machines*
 CLEMENTS, JAMES M., Birmingham—*Machines for working button holes, sail making, etc.*
 ALEXANDRA SEWING MACHINE Co., London—*Sewing machine*
 IRWIN, C., & Co., Canada—*Sewing machines*
 REED & CHILDS, Canada—*Boot-trees*

CLASS LVIII.

Apparatus and Processes used in the Manufacture of Furniture and Objects for Dwellings.

No award.

CLASS LIX.

Apparatus and Processes used in Paper-making, Dyeing, and Printing.

SILVER MEDAL.

DONKIN, B., & Co., London—*Paper making machinery*

BRONZE MEDAL.

ROBINSON, J., & Co., Salford—*Machine for glazing calico and linen*

HONOURABLE MENTION.

STONES, M. V., London—*Wires for paper-making*

BOISSONNAULT, N. F., Canada—*Printing frame*

CLASS LX.

Machines, Instruments, and Processes used in various Works.

No award.

CLASS LXI.

Carriages and Wheelwrights' Work.

HORS CONCOURS.

HOOPER & Co. (Mr. G. N. Hooper, Vice-President and Reporter of the Jury), London—*Carriages*

GOLD MEDAL.

PETERS, T., & SONS, London—*Carriages*

SILVER MEDALS.

LAURIE & MARNER, London—*Carriages*

WYBURN & Co., London—*Carriages*

COLE, WM., London—*Carriages*

MORGAN, E. & G. H., London—*Patent headed carriages*

MASON, W. H., London—*Carriages*

ALDEBERT, ISAAC, London—*Carriages*

ROCK & SON, Hastings—*Automatic carriages*

WARD, J., London—*Invalid carriages*

HOLMES, H. & A., Derby—*Elliptic spring carriages*

WOODALL, J., & SONS, London—*Carriages*

COCKSHOOT, J., JUN., Manchester—*Improved Barouche*

BRONZE MEDALS.

FULLER, J. & A., Bath—*Carriages*

STAREY, T. R., Nottingham—*Carriages*

IVALL & LARGE, London—*Carriage*

HUTTON, J., & SONS, Dublin—*Sociable and Irish car*

THORN, W. & F., London—*Light carriages*

WINDOVER, C. S., London—*Carriage*

MULLINER, H., Leamington—*Carriages*

MCNAUGHT & SMITH, Worcester—*Barouche*

MULLINER, F., Northampton and London—*Carriages*

EVANS, JAMES, Liverpool—*Drag with patent springs*

OFFORD, J. & R., London—*Carriages*

HONOURABLE MENTION.

COOPER, London—*Carriages*

DAVIES & SON, London—*Carriages*

DE WOLFE, J. M., Nova Scotia—*Carriages*

O'BRIEN, Nova Scotia—*Carriages*

STAR MANUFACTURING Co., Nova Scotia—*Axle-trees*

THE MAHARAJAH HOLKAR, Bengal—*Native carriages*

CO-OPÉRATEURS.

BRONZE MEDAL.

LAKE, J. P., London, foreman, Messrs. Hooper & Co.'s

HONOURABLE MENTION.

BOLT, W., London, chief bodymaker, &c., Messrs. Hooper & Co.'s

HEWITT, W., London, chief painter, Messrs. Hooper & Co.'s

MCGRATH, T., London, foreman, Messrs. Peters & Sons'

BOLTON, J. chief painter, Messrs. Peters & Sons'

LEADER, MORGAN J., London, at Messrs. Laurie & Marner's

FRIFT, W., London, chief bodymaker, Messrs. Wyburn & Co.'s

CLASS LXII.

Harness and Saddlery.

SILVER MEDALS.

SWAINE & ADENEY, London—*Whips and canes*

HAYNES & SON, London—*Saddle trees*

BRONZE MEDALS.

SHAMMON, W., Birmingham—*Whips, bridles, and bits*

MARTIN, W. H., London—*Whips and canes*

HAMPSON, J., & Co., Walsall—*Bits, stirrups, and spurs*

BLISS, W., London—*Saddlery and horse-clothing*

HONOURABLE MENTION.

COLLECTION FROM BOMBAY AND BENGAL—*Camel saddles and embroidered harness*

ALDRED, THOMAS, London—*Whips and canes*

JASSMANN, L., London—*Saddles and harness*

ELLAM, B., London—*Harness, saddlery, and whips*

CUFF & SONS, London—*Saddlery and harness*

HEAD, JOHN, London—*Saddlery and harness*

MCCRACKEN, A., Birmingham—*Saddlery*

BLACKWELL, S., London—*Saddlery and harness*

CLASS LXIII.

Railway Apparatus.

HORS CONCOURS.

POSTMASTER-GENERAL, London—*Apparatus, &c., for effecting exchange of despatches whilst the train is in motion (Class 60)*

GOLD MEDALS.

KITSON & Co., Leeds—*Locomotive*
 STEPHENSON, R., & Co., Newcastle-on-Tyne—*Locomotive*
 SAXBY & FARMER, London—*Railway points and signals*

SILVER MEDALS.

LILLESHELL COMPANY, Shiffhall—*Locomotive*
 POOLEY, H., & SONS, Liverpool—*Weighing-machines*
 TURTON, THOMAS, & SONS, Sheffield—*Springs and buffers*

BRONZE MEDALS.

GORDON, ALICE ISABEL, London—*Communication between passengers and guard and between trains in motion and stations*
 PREECE, W. H., Southampton—*Electric signals*
 SPENCER, J., & SONS, Newcastle-on-Tyne—*Railway springs and buffers*
 LIVESEY, E., & EDWARDS, London—*Signal models*

HONOURABLE MENTION.

DERING, G. E., Welwyn—*Improved permanent ways for railways*
 HUGHES, H., & Co., Loughborough—*Small tank locomotive*
 RUSTON, PROCTOR, & Co., Lincoln—*Locomotive* (Class 52)
 FAIRLIE, ROBERT F., London—*Patent duplex locomotives*
 GRAND TRUNK RAILWAY OF CANADA—*Model wagon*

CLASS LXIV.

Telegraphic Apparatus and Processes.

HORS CONCOURS.

SIEMENS BROTHERS, London (Mr. Siemens, member of the Jury)

GRAND PRIX.

FIELD, CYRUS, and the ANGLO-AMERICAN TRANSATLANTIC CABLE COMPANIES, United States and Great Britain—*The Trans-Atlantic cable*

GOLD MEDAL.

HOOPER, W., London—*Telegraph cables*

SILVER MEDAL.

HENLEY, W. T., London—*Telegraph cables*

HONOURABLE MENTION.

NICOLL, D., London—*Wires and cables*

CO-OPÉRATEUR.

CONTAINING

DETAILED NOTICES OF MANY OF THE OBJECTS
EXHIBITED.

[The Notices in this Appendix have been arranged in the order of the Groups and Classes to which the various objects described belong.]

GROUP I.

CLASS II.

ENGLISH EARTHENWARE MOSAICS.

Most of the Mosaics exhibited in the British department have been worked with materials, and in a mode, different from the ancient, or those other processes now practised. The material consists of tesserae of earthenware, which have been manufactured by Messrs. Minton & Co., Stoke-on-Trent.

They are, in fact, diminutive bricks, and, if used in the open air, are less liable to lose their colour by oxidation than tesserae made of glass or enamel. It may also be expected, that the cement used to bind them together will be more durable than putty or a mastic.

The scales of colour at present are more

limited than in tesserae made of glass, but daily experiments are increasing the variety. They seem well adapted for reproducing pictures in fresco, distemper, or painted in any medium which does not reflect.

They require little cutting, as they can be made of any shape; but when cutting is necessary, it is easily done by a small machine or by the hand. The process of working is quicker than with glass tesserae. The face of the tesserae is gummed down on paper. Portions can be worked separately by different persons, and afterwards easily brought together. They are then joined and backed with cement, and thus become one block.

GROUP II.

CLASS VI.

MACLURE, MACDONALD, & MACGREGOR, *Lithographers and Ornamental Printers to Her Britannic Majesty, London, Liverpool, Manchester, and Glasgow.*

Obtained the Prize Medal of the International Exhibition, London, 1862, for 'Lithographic Printing by Machinery.'

THE specimens exhibited represent every description of *Lithography*, produced by MACLURE, MACDONALD, & MACGREGOR, namely, 'chromo,' chalk, line, transfer, and engraving on stone; *portraits in ink*, a new, powerful, and wonderfully rapid process; also, reduced fac-similes of same by elastic method. *Engraving on steel and copper*, viz. landscape, portrait, medallion, microscopic, engine turning, and commercial. *Bank-notes and designs*; postage stamps, &c. *Die-sinking and embossing*; medals and coins; and *Machine printing from stone by steam power*, approximating to type in rapidity of production.

Ont obtenu la Médaille de l'Exposition Internationale, Londres, 1862, pour Impression lithographique au moyen de machines.

Les spécimens exposés représentent toutes les variétés de *Lithographie* exécutées par MACLURE, MACDONALD, et MACGREGOR, savoir: chromolithographie, lithographie aux crayons, linéaire, autolithographie, et gravure sur pierre; *portraits à l'encre*, un procédé nouveau à puissants effets et d'une rapidité merveilleuse; et aussi fac-similés réduits des mêmes

par méthode élastique. *Gravure sur acier et cuivre* de paysages, portraits, médaillons; gravure au microscope, en guillochés, et commerciale. *Billets de banque et dessins ad hoc*; timbres de poste, etc. *Gravure en creux et en relief*; médailles et monnaies; enfin, *Impression mécanique à vapeur d'après la pierre*, égalant presque en rapidité celle à caractères.

Erlangten die Preis-Medaille der internationalen Industrie-Ausstellung zu London, in 1862, für 'lithographischen Maschinendruck.'

Die ausgestellten Proben vertreten jede Art der von MACLURE, MACDONALD & MACGREGOR producirten *lithographischen Arbeiten*, nämlich: 'Chromo,' Kreide, Linie, Ueberdruck und Gravirung auf Stein; *Portraits in Tinte*, ein neuer, effectiver und ausserordentlich rascher Process; ebenso reducirte Facsimile derselben durch die elastische Methode. *Landschafts-, Portrait-, Medallion-, microscopischer, Maschinen- und commercieller Stahl- und Kupferstich. Banknoten und Entwürfe*; Postmarken u. s. w. *Stempelschneiden und erhabene Arbeit*; Medaillen und Münzen; und *Maschinendruck von Stein bei Dampfkraft*, dem Buchdruck in Schnelligkeit der Herstellung ziemlich gleichkommend

HOUSE OF LORDS AND PARLIAMENT.

FACSIMILES OF PUBLIC AND PRIVATE ACTS, PATENTS, &c.; JOURNALS OF THE HOUSE OF LORDS AND ACTS OF PARLIAMENT.

The following documents and books are transmitted in order to exhibit and illustrate some of the principal proceedings in the House of Lords and Parliament, and especially the mode in which the business of the House, and the Acts of Parliament are recorded:—

1. Facsimile of a Commission for opening Parliament.
2. Facsimile for proroguing Parliament.
3. Facsimile for authorising the Royal Assent to be given to Bills.
4. Original Commission for proroguing Parliament in 1864, sealed with the Great Seal.
5. Facsimile of an Act of Parliament for granting supplies to Her Majesty, as recorded on vellum.
6. Facsimile of an ordinary public Act.
7. Facsimile of a local and personal Act.

8. Facsimile of a private Act.
9. Facsimile of Letters Patent, creating a peerage.
10. Facsimile of the Writ of Summons of the peer to attend Parliament.
11. A volume of the Minutes of the Proceedings of the House of Lords in 1865, in which the business transacted at each day's sitting is briefly entered.
12. A volume of the Journals of the House of Lords, in which the same business is entered more formally and in greater detail, and which, is regarded as the authentic record of the proceedings of the House.
13. The printed Acts of Parliament of the session 1865, which being printed by Her Majesty's printers, are received in evidence in the courts of justice (8 volumes).

HOUSE OF COMMONS.

PARLIAMENTARY PAPERS, FOR THE USE OF THE HOUSE OF COMMONS.

The fifty-eight volumes of so-called Parliamentary Papers, printed for the use of the House of Commons during the Session of 1865, afford a general insight into the operations of the Government in its various branches, and into the labours of the House of Commons itself, and comprise, under the three general heads of (1) 'Reports and Papers,' (2) 'Bills,' (3) 'Papers presented by command of Her Majesty,' a large amount of information respecting matters of public interest.

These documents are either periodical returns and accounts rendered annually by public departments and public officials, in pursuance of Acts of Parliament, or are printed by special order of the House upon the motion of individual members, or else are presented to the House by order of the Queen.

A select committee is appointed at the beginning of each session to assist the Speaker in all matters relating to the printing executed by order of the House, and for the purpose of selecting and arranging for printing returns and papers presented in pursuance of motions made by members. All papers are referred to this committee, and it is the usual practice for the House not to order papers to be printed until they have been examined by the committee.

A copy of every paper printed by the House is furnished to each member, and copies may be obtained by the public by purchase. A reference to the list of papers contained in these volumes will show that a considerable amount of the business of the public offices consists in framing returns, and supplying information for

Parliament. A consecutive record is thus maintained of the progress of the country in its social, commercial, and industrial relations, by the statistical accounts prepared at the Board of Trade, by the Annual Reports of the Postmaster-General, of the Commissioners of Customs, of the Registrar-General, of Her Majesty's Consuls abroad, and many others. But besides these departmental reports, it is usual to communicate to the House the reports of all Royal Commissions appointed to enquire into matters of public interest, which are printed generally with the evidence in extenso taken before the Commissioners. Similar in some respects to these latter are the Reports and Proceedings of Select Committees appointed by the House of Commons itself.

At the end of each session the papers are systematically arranged in volumes, with a proper index; and to facilitate reference to the transactions of past years, general indexes are occasionally published. There is one such index extending over the period 1801-52, and a later one from 1853 to 1857.

It may be mentioned that parliamentary papers may be sent through the Post Office to all places in the United Kingdom, at a rate of postage not exceeding 1*d.* for every four ounces in weight, provided they be sent uncovered, or with a cover open at the sides, and with the words 'Parliamentary Proceedings' written on printed on the cover.

Parliamentary papers may also be sent, under the 'book post' privilege, to all the colonies, and to those foreign states between which and this country there is a book post.

CATALOGUE OF THE PUBLICATIONS

Authorised by the Lords Commissioners of Her Majesty's Treasury, under the direction of the Master of the Rolls.

CHRONICLES AND MEMORIALS, ETC.

In the year 1822 the House of Commons presented an address to the Crown, stating that the ordinary editions of the works of our ancient historians were inconvenient and defective; that many of their writings still remained in manuscript, and, in some cases, in a single copy only. They added, 'that an uniform and convenient edition of the whole, published under His Majesty's royal sanction would be an undertaking honourable to His Majesty's reign, and conducive to the advancement of historical and constitutional knowledge; that the House therefore humbly besought His Majesty, that he would be graciously pleased to give such directions as His Majesty, in his wisdom, might think fit for the publication of a complete edition of the ancient historians of this realm, and assured His Majesty that whatever expense might be necessary for this purpose would be made good.'

The Master of the Rolls, being very desirous that effect should be given to the resolution of the House of Commons, submitted to Her Majesty's Government in 1857 the plan already referred to for the publication of the ancient chronicles and memorials of the United Kingdom, and it was adopted accordingly. In selecting these works it was considered right, in the first instance, to give preference to those of which the manuscripts were unique, or the materials of which would help to fill up blanks in English history for which no satisfactory and authentic information has hitherto

existed in any accessible form. The Master of the Rolls desired to form a *corpus historicum*, which should be as complete as possible, within reasonable limits. In a subject of so vast a range it was important that the historical student should be able to select such volumes as his own peculiar tastes and studies required, and should not be put to the expense of purchasing the whole collection; an inconvenience inseparable from any other plan than that which has been in this instance adopted.

Of the Chronicles and Memorials 80 volumes have been published. They embrace the period from the earliest time of British history down to the end of the reign of King Henry VII.

Recueil des Croniques et Anchiennes Istories de la Grant Bretaigne a present nomme Engleterre, par Jehan de Waurin. From Albina to 688. Edited by William Hardy, Esq., F.S.A.

This curious chronicle extends from the fabulous period of history down to the return of Edward IV. to England in the year 1471, after the second deposition of Henry VI. The manuscript from which the text of this work is taken is believed to be the only complete and nearly contemporary copy now in existence. It is in 12 volumes folio maximo vellum, bound in morocco, and is illustrated with exquisite miniatures, vignettes, and initial letters. It was written towards the end of the fifteenth century, having been expressly

executed for Louis de Bruges Seigneur de la Gruthuyse and Earl of Winchester, from whose cabinet it passed into the library of Louis XII. at Blois. The work, as originally bound, was comprised in six volumes, but it has since been rebound in twelve, and is now in the Imperial Library at Paris.

This work has also been translated into English, and published under the direction of the Master of the Rolls.

Ricardi de Cirencestria Speculum Historiale de gestis Regum Angliæ, ab anno 449 usque ad annum 1066. Edited by John E. B. Mayor, M.A.

Of the compiler of this work, which is in four parts, very little is known. In the prologue he calls himself Richard a Monk of Westminster, and at the end of the first part, Richard of Cirencester a Monk of St. Peter's Westminster. One volume only, containing the first three books, has at present been published; the remainder is in the press, and will shortly appear. There is a continuation of the work down to the year 1348, which in due time will also be printed.

Leechdoms, Wortcunning, and Star-craft of Early England: a collection of documents illustrating the history of science in this country before the Norman Conquest. By the Rev. Oswald Cockayne, M.A.

This work illustrates not only the history of science, but the history of superstition. In addition to the information bearing directly upon the medical skill and medical faith of the times, there are many passages which incidentally throw light upon the general mode of life and ordinary diet. The volumes are interesting not only in their scientific, but also in their social aspect.

The manuscripts from which they have been printed are valuable to the Anglo-Saxon scholar for the illustrations they afford of the Anglo-Saxon orthography.

Life of Edward the Confessor—I. La Estoire de Seint Aedward le Rei. II. Vita Beati Edvardi Regis et Confessoris. III. Vita Æduuardi Regis qui apud Westmonasterium requiescit. Edited by the Rev. H. R. Luard, M.A.

The first of these biographies is a poem in Norman French, containing 4,686 lines. It is addressed to Alianor, Queen of Henry the Third, and was probably written in the year 1245, on the occasion of the restoration of the church of Westminster. Nothing is known of the author.

The second, also by an anonymous author, was apparently written for Queen Edith, between the years 1066 and 1074, during the pressure of the suffering brought on the Saxons by the Norman conquest. It notices many facts not found in other writers, and some which differ considerably from the usual accounts.

The third is an anonymous poem, containing

536 lines, written between the years 1440 and 1450, by command of Henry VI., to whom it is dedicated. Though it does not throw any new light on the reign of Edward the Confessor, yet it is valuable as a specimen of the Latin poetry of the time.

The Anglo-Saxon Chronicle. Edited and translated by Benjamin Thorpe, Esq.

This Chronicle, extending from the earliest history of Britain to the year 1154, is justly the boast of England; for no other nation can produce any history, written in its own vernacular, at all approaching it, either in antiquity, truthfulness, or extent, the historical books of the Bible alone excepted. There are at present six independent manuscripts of the Saxon Chronicle, ending in different years, and written in different parts of the country. In the present edition the text of each manuscript is printed in columns on the same page, so that the student may see at a glance the various changes which occur in orthography, whether arising from locality or age.

Alexandri Neckam de Naturis Rerum Libri Duo. With the poem of the same author, *De Laudibus Divinæ Sapientiæ.* Edited by Thomas Wright, Esq., M.A., F.S.A. 1 vol.

Neckam was a man who devoted himself to science, such as it was in the twelfth century.

In the 'De Naturis Rerum' are to be found what may be called the rudiments of many sciences mixed up with much error and ignorance. Neckam was not thought infallible, even by his contemporaries, for Roger Bacon remarks of him, 'this Alexander in many things wrote what was true and useful; but he neither can nor ought by just title to be reckoned among authorities.'

Neckam, however, had sufficient independence of thought to differ from some of the schoolmen who in his time considered themselves the only judges of literature. He had his own views in morals, and in giving us a glimpse of them, as well as of his other opinions, he throws much light upon the manners, customs, and general tone of thought prevalent in the twelfth century.

The poem entitled 'De Laudibus Divinæ Sapientiæ,' appears to be a metrical paraphrase or abridgment of the 'De Natura Rerum.' It is written in the elegiac metre; and though there are in it many lines which violate classical rules, it is, as a whole, above the ordinary standard of mediæval Latin.

Chronicon Monasterii de Abingdon. Vols. I. and II. Edited by the Rev. Joseph Stevenson, M.A., of University College, Durham, and Vicar of Leighton Buzzard.

This Chronicle traces the history of the great Benedictine monastery of Abingdon in Berkshire, from its foundation by king Ina of Wessex, to the reign of King Richard I., shortly after

which period the present narrative was drawn up by an inmate of the establishment. The author had access to the title-deeds of the house, and incorporates into his history various charters of the Saxon kings, which are of great importance as illustrating not only the history of the locality, but that of the kingdom at large. The work is now printed for the first time.

Letters and Papers illustrative of the Wars of the English in France during the Reign of Henry VI., King of England. Vol. I., and Vol. II. (in two Parts.) Edited by the Rev. Joseph Stevenson, M.A., of University College, Durham, and Vicar of Leighton Buzzard.

The letters and papers contained in these volumes are derived chiefly from originals or contemporary copies extant in the Bibliothèque Impériale, and the Dépôt des Archives, in Paris. They illustrate the line of policy adopted by John Duke of Bedford and his successors during their government of Normandy, and such other provinces of France as had been acquired by King Henry V. We may here trace, step by step, the gradual decline of the English power, until we are prepared to read of its final overthrow in the narrative of Blondel.

Historia Monasterii S. Augustini Cantuariensis. By Thomas of Elmham. Edited by Charles Hardwick, M.A.

This history extends from the arrival of St. Augustine in Kent until 1191. Prefixed is a chronology as far as 1418, which shows in outline what was to have been the character of the work when completed. The only copy known is in the possession of the Master and Fellows of Trinity College, Cambridge. The author's name does not occur; but the internal evidence in the Chronicle shows that he was a monk of St. Augustine's, Canterbury, and treasurer of that foundation. He was connected with Norfolk, and most probably with Elham, whence he derived his name.

Magna Vita Sancti Hugonis Lincolnensis Episcopi. Edited by the Rev. James F. Dimock, M.A.

This work contains a number of very curious and interesting incidents, is very valuable, not only as a truthful biography of a celebrated ecclesiastic, but as the work of a man who, from personal knowledge, gives notices of passing events, as well as of individuals, who were then taking active part in public affairs.

The author, in all probability, was Adam Abbot of Evesham. He was domestic chaplain and private confessor of Bishop Hugh, and in these capacities he was admitted to the closest intimacy. Bishop Hugh was Prior of Witham for eleven years before he became Bishop of Lincoln. His consecration took place on the 21st September, 1186; he died on the 16th of November, 1200; and was canonised in 1220.

Chronicles and Memorials of the Reign of Richard the First. Vol. I. *Itinerarium Peregrinorum et Gesta Regis Ricardi.* Edited by William Stubbs, M.A., Vicar of Navestock, Essex, and Lambeth Librarian.

The authorship of this Chronicle, hitherto ascribed to Geoffrey Vinesauf, is now more correctly attributed to Richard, Canon of the Holy Trinity of London. The narrative extends from A.D. 1187 to 1199; but its chief interest consists in the minute and authentic narrative with which it furnishes us of the exploits of King Richard I., from his departure from England, in December 1189, to his death in 1199. The author states, in his prologue, that he was an eye-witness of much that he records; and various incidental circumstances which occur in the course of the narrative confirm this assertion.

Chronicles and Memorials of the Reign of Richard I. Vol. II. *Epistolæ Cantuarienses, the Letters of the Prior and Convent of Christ Church, Canterbury,* from 1187 to 1199. Edited by William Stubbs, M.A., Vicar of Navestock, Essex, and Lambeth Librarian.

These letters, written between 1187 and 1199, are of value as furnishing authentic materials for the history of the ecclesiastical condition of England during the reign of Richard I. They had their origin in a dispute which arose from the attempts of Baldwin and Hubert, archbishops of Canterbury, to found a college of secular canons—a project which gave great umbrage to the monks of Canterbury, who saw in it a design to supplant them in their function of metropolitan chapter. These letters are printed, for the first time, from a MS. belonging to the archiepiscopal library at Lambeth.

Giraldi Cambrensis Opera. Vols. I. II. and III. Edited by J. S. Brewer, M.A.

These volumes contain the historical works of Gerald du Barry, who lived in the reigns of Henry II., Richard I., and King John, and attempted to re-establish the independence of Wales, by restoring the see of St. Davids to its ancient primacy. His works are of a very miscellaneous nature, both in prose and verse, and are remarkable chiefly for the racy and original anecdotes which they contain relating to contemporaries. He is the only Welsh writer of any importance who has contributed so much to the mediæval literature of this country, or assumed, in consequence of his nationality, so free and independent a tone. His frequent travels in Italy, in France, in Ireland, and in Wales, gave him opportunities for observation which did not generally fall to the lot of mediæval writers in the 12th and 13th centuries; and of these observations Giraldus has made due use.

Only extracts from these treatises have been

printed before; and almost all of them are taken from unique manuscripts.

Royal and other Historical Letters Illustrative of the Reign of Henry III., from the Originals in the Public Record Office. Vols. I. and II. Selected and edited by the Rev. W. W. Shirley, Tutor and late Fellow of Wadham College, Oxford.

The letters contained in these volumes are derived chiefly from the ancient correspondence formerly preserved in the Tower of London, and now deposited in the Public Record Office. They illustrate the political history of England during the growth of its liberties, and throw considerable light upon the personal history of Simon de Montfort. The affairs of France form the subject of many of these letters, more especially in regard to the province of Gascony. The entire collection consists of nearly 700 documents, the greater portion of which are now printed for the first time.

Letters of Bishop Grosseteste, illustrative of the Social Condition of his Time. Edited by Henry Richards Luard, M.A., Fellow and Assistant Tutor of Trinity College, Cambridge.

The letters of Robert Grosseteste (131 in number) are here collected from various sources, and arranged in chronological order. They range in date from about A.D. 1210 to 1253, and relate to various matters connected not only with the political history of England during the reign of Henry III., but with its ecclesiastical condition. They refer especially to the diocese of Lincoln, of which Grosseteste was bishop. These letters have not hitherto been collected, and the greater portion of them are now printed for the first time.

Rogeri Bacon Opus Tertium. Edited by J. S. Brewer, M.A.

This is the celebrated treatise—which, up to this time, had never been printed—so frequently referred to by the great philosopher in his works. It contains the fullest details we possess of the life and labours of Roger Bacon. The volume also contains a fragment by the same author, supposed to be unique, the '*Compendium Studii Theologie*.'

Monumenta Franciscana. Edited by J. S. Brewer, M.A.

This volume contains the original materials for the history of the settlement of the order of St. Francis in England, the letters of Adam de Marisco, and other papers connected with the foundation and diffusion of this great body. It has been the aim of the editor to collect whatever historical materials could be found in this country, in the British Museum, or elsewhere, towards illustrating a period of the national history for which only scanty materials exist. None of these works have been printed before.

Brut y Tywysogion. Edited and translated by the Rev. J. Williams Ab Ithel.

This 'Chronicle of the Princes of Wales' has been attributed to Caradoc of Llancarvan, who flourished about the middle of the twelfth century. It is written in the ancient Welsh language, and begins at the abdication and death of Cadwalader at Rome, in the year 681, and continues the history down to the subjugation of Wales by King Edward I., about the year 1282.

Annales Cambriae. Edited by the Rev. J. Williams Ab Ithel.

These Annals, which are in Latin, commence in the year 447, and come down to the year 1288. The earlier portion appears to be taken from an Irish Chronicle, which was also used by Tigemad, and by the compiler of the Annals of Ulster. During its first century, it contains scarcely anything relating to Britain; the earliest direct concurrence with English history is relative to the mission of Augustine. Its notices throughout, though brief, are valuable. These Annals were probably written at St. David's, by Blegewryd Archdeacon of Llandaff, the most learned man in his day in all Cymru.

Annales Monastici. Vol. I. *Annales de Mar-gan*, 1066-1232; *Annales de Theokesberia*, 1066-1263; *Annales de Burton*, 1004-1263. Vol. II. *Annales Monasterii de Wintonia*, 519-1277. *Annales Monasterii de Waverleia*, 1-1291. Vol. III. *Annales prioratus de Dunstaplia*, 1-1297; *Annales Monasterii de Bermundeseia*, 1042-1432. Edited by Henry Richards Luard, M.A., Fellow of Trinity College, and Registry of the University, Cambridge.

The present collection of Monastic Annals embraces all the more important chronicles compiled in the different religious houses in England during the thirteenth century. These distinct works are seven in number, and the extreme period which they embrace ranges from A.D. 1 to 1432, although they refer more especially to the reigns of King John, Henry III., and Edward I. Some of these narratives have already appeared in print, but others are now printed for the first time.

Chronica Johannis de Oxenedes. Edited by Sir Henry Ellis, K.H.

Although this Chronicle tells of the arrival of Hengist and Horsa in England, in the year 449, yet it substantially begins with the reign of King Alfred, and comes down to the year 1292, where it ends abruptly. The history is particularly valuable for its notices of events in the eastern portions of the kingdom, which are not to be elsewhere obtained, and some curious facts are mentioned relative to the floods in that part of England, which are confirmed in the Friesland Chronicle of Anthony Heinrich, pastor of the Island of Mohr.

Bartholomæi de Cotton, Monachi Norwicensis, Historia Anglicana, 449-1298. Edited by Henry Richards Luard, M.A., Fellow and Assistant Tutor of Trinity Col., Cambridge.

The author, a monk of Norwich, has here given us a Chronicle of England from the arrival of the Saxons in 449 to the year 1298, in or about which year it appears that he died. The latter portion of this history (the whole of the reign of Edward I. more especially) is of great value, as the writer was contemporary with the events which he records. An Appendix contains several illustrative documents connected with the previous narrative.

The Year Books of the Reign of Edward I.
Edited and translated by Alf. J. Horwood,
of the Middle Temple, Barrister-at-Law.

The volumes known as the 'Year Books' contain reports in Norman French of cases argued and decided in the courts of Common Law. They may be considered to a great extent as the 'lex non scripta' of England, and have been held in the highest veneration by the ancient sages of the law, and were received by them as the repositories of the first recorded judgments and dicta of the great legal luminaries of past ages. They are also worthy of the attention of the general reader on account of the historical information and the notices of public and private persons which they contain, as well as the light which they throw on ancient manners and customs.

Historia et Cartularium Monasterii S. Petri Gloucestrie. Edited by W. H. Hart, Esq., F.S.A., Membre Correspondant de la Société des Antiquaires de Normandie. Vols. I. and II.

This work consists of two parts, the History and the Cartulary of the Monastery of St. Peter, Gloucester.

The history furnishes an account of the monastery from its foundation, in the year 681, to the early part of the reign of Richard II., together with a calendar of donations and benefactions.

It treats principally of the affairs of the monastery, but occasionally matters of general history are introduced. Its authorship has generally been assigned to Walter Froucester, the twentieth abbot, but without any foundation.

Eulogium Historiarum sive Temporis. Edited by Frank Scott Haydon, B.A., formerly Scholar of Jesus College, Cambridge.

This is a Latin Chronicle extending from the creation to the latter part of the reign of Edward III., and was written by a monk of the Abbey of Malmesbury, in Wiltshire, about the year 1367. A continuation carrying the history of England down to the year 1413 was added, in the former half of the fifteenth century, by an author whose name is not at present known. The original Chronicle is divided into five books. It contains a history of the world generally, but more especially

of England down to the year 1366. The continuation extends the history down to the coronation of Henry V. The Eulogium itself is chiefly valuable as containing a history by a contemporary of the period between 1356 and 1366. The notices of events appear to have been written very soon after their occurrence. Among other interesting matter the Chronicle contains a diary of the Poitiers campaign, evidently furnished by some person who accompanied the army of the Black Prince. The continuation of the Chronicle is also the work of a contemporary and gives a very interesting account of the reigns of Richard II. and Henry IV. It is believed to be the earliest authority for the statement that the latter monarch died in the Jerusalem Chamber at Westminster.

Polychronicon Ranulphi Higden Monachi Cestrensis; together with the English Translations of John Trevisa, and of an unknown writer of the fifteenth century. Edited by Churchill Babington, B.D. Only 1 vol. published.

This is one of the many mediæval chronicles which assume the character of a history of the world. It begins with the creation, and is brought down to the author's own time, the reign of Edward III. Prefixed to the historical portion of the work is a chapter devoted to geography, in which is given a description of every known land.

To say that the Polychronicon was written in the fourteenth century is to say that it is not free from inaccuracies. It has, however, a value apart from its intrinsic merits. It enables us to form a very fair estimate of the knowledge of history and geography which well-informed readers of the fourteenth and fifteenth centuries possessed, for it was then the standard work on general history.

The two English translations, which are printed with the original Latin, afford interesting illustrations of the gradual change of our language, for one was made in the fourteenth century, the other in the fifteenth. The differences between Trevisa's version and that of the unknown writer are often considerable.

The Chronicle of England, by John Capgrave.
Edited by the Rev. F. C. Hingeston, M.A.,
of Exeter College, Oxford.

John Capgrave was prior of Lynn, in Norfolk, and provincial of the order of the Friars Hermits of England shortly before the year 1464. His Chronicle extends from the creation of the world to the year 1417. As a record of the language spoken in Norfolk (for it is written in English) it is of considerable value.

Johannis Capgrave Liber de Illustribus Henricis. Edited by the Rev. Francis Charles Hingeston, M.A. of Exeter College, Oxford.

This work is dedicated to Henry VI. of England, who appears to have been in the

author's estimation the greatest of all the Henries. It is divided into three distinct parts, each having its own separate dedication. The first part relates only to the history of the Empire, and extends from the election of Henry I., the Fowler, to the end of the reign of the Emperor Henry VI. The second part is devoted to English history, and extends from the accession of Henry I., in the year 1100, to the year 1446, which was the twenty-fourth year of the reign of King Henry VI. The third part contains the lives of illustrious men who have borne the name of Henry in various parts of the world.

Capgrave was born in 1393, in the reign of Richard II., and lived during the Wars of the Roses, for the history of which period his work is of some value.

Royal and Historical Letters during the Reign of Henry IV. Edited by the Rev. F. C. Hingeston, M.A. of Exeter College, Oxford.

This volume like all the others in the series containing a miscellaneous selection of letters, is valuable on account of the light it throws upon biographical history, and the familiar view it presents of characters, manners and events of the time. The period (1399 to 1413) required much elucidation; and this volume will materially contribute to that desirable end.

Chronicon Abbatie de Evesham ad Annum 1418. Edited by the Rev. W. D. Macray, M.A., Bodleian Library, Oxford.

The Chronicle of Evesham, here first printed, illustrates the history of that important monastery, from its foundation by Egwin, about A.D. 690, to the year 1418. Its chief feature is an autobiography, which makes us acquainted with the inner daily life of a great abbey, such as but rarely has been recorded. Interspersed are many notices of general, personal, and local history, which will be read with much interest. This work exists in a single MS., and is now for the first time printed.

Memorials of Henry V. I. Vita Henrici Quinti, Roberto Redmanno Auctore. II. Versus Rhythmici in laudem Regis Henrici Quinti. III. Elmhami Liber Metricus de Henrico V. Edited by C. A. Cole, Esq.

This volume contains three treatises which more or less illustrate the history of the reign of Henry V., viz.: A Life by Robert Redman; a Metrical Chronicle by Thomas Elmham, prior of Lenton, a contemporary author; Versus Rhythmici, written apparently by a monk of Westminster Abbey, who was also a contemporary of Henry V. These works are printed for the first time in the present volume.

Chronica Monasterii Sancti Albani. Edited by Henry Thomas Riley, M.A. 6 vols.

We have here a History of England, from the death of Henry III. to the death of Henry

V., written by Thomas Walsingham, precentor of St. Alban's and prior of the Cell of Wy-mundham, belonging to that abbey. Walsingham's work is printed in two vols. from MS. VII. in the Arundel Collection in the College of Arms, London, a manuscript of the fifteenth century, collated with MS. 13 E. IX. in the King's Library, in the British Museum, and MS. VII. in the Parker Collection of Manuscripts at Corpus Christi College, Cambridge.

In the third volume is a Chronicle of English History, from A.D. 1259 to 1306, attributed to William Rishanger, monk of Saint Albans, who lived in the reign of Edward I. This has been printed from the Cottonian Manuscript, Faustina B. IX. (of the fourteenth century) in the British Museum, collated with MS. 14 C. VII. (fols. 219-231) in the King's Library, British Museum, and the Cottonian Manuscript Claudius E. III. fols. 306-331.

In the same Volume—Annales Regni Scotiæ.

An account of transactions attending the award of the kingdom of Scotland to John Balliol by King Edward I. A.D. 1291-2. From MS. Cotton. Claudius D. VI. attributed to William Rishanger, above mentioned, but on no sufficient ground.

In the same Volume—Annales Angliæ et Scotiæ.

A short Chronicle of English History, from A.D. 1292 to 1300 by an unknown hand. From MS. Cotton Claudius D. VI.

In the same Volume—Willelmi Rishanger Gesta Edwardi Primi, Regis Angliæ.

A short Chronicle from A.D. 1297 to 1307. From MS. 14 C. I. in the Royal Library, and MS. Cotton Claudius D. VI. With an addition of Annales Regum Angliæ, probably by the same hand.

In the same Volume—Annales Regis Edwardi Primi (Fragmentum I.)

A fragment of a Chronicle of English History, A.D. 1299, 1300. From MS. Cotton Claudius D. VI.

Annales Regis Edwardi Primi (Fragmentum II.)

A fragment of a Chronicle of English History, A.D. 1295-1300. From MS. Claudius D. VI.

Annales Regis Edwardi Primi (Fragmentum III.)

A fragment of a Chronicle of English History, A.D. 1285-1307. From MS. 14 C. I. in the Royal Library.

In the fourth volume is a Chronicle of English History, by an anonymous writer, A.D. 1259-1296. From MS. Cotton Claudius D., VI.

In the same Volume. Johannis de Trokelowe Annales.

Annals of King Edward II., A.D. 1307-1323, by John de Trokelowe, a monk of St. Albans. From MS. Cotton Claudius D. VI.

In the same Volume. Henrici de Blaneforde Chronica.

A continuation of Trokelowe's *Annales*, A.D. 1323, 1324. From MS. C. Cotton Claudius D. VI.

In the same Volume. Annales Ricardi Secundi et Henrici Quarti, Regum Angliæ.

A full chronicle of English history, by an anonymous writer of St. Albans, A.D. 1392-1406. From MS. VII. in the Library of Corpus Christi College, Cambridge.

In the same Volume. Liber de Benefactoribus Monasterii Sancti Albani.

An account of the past benefactors of St. Albans, written in the early part of the 15th century. From MS. VII. in the Library of Corpus Christi College, Cambridge.

In the fifth volume begins a history of the Abbots of St. Albans, from A.D. 793 to the close of the fourteenth century, compiled by Thomas Walsingham, precentor of St. Albans. From MS. Cotton Claudius E. IV. in the British Museum.

Fasciculi Zizaniorum Magistri Johannis Wyclif cum Tritico, ascribed to Thomas Netter of Walden. Edited by the Rev. Walter Waddington Shirley, M.A. 1 vol.

This work derives its principal value from the fact that it is the only contemporaneous account of the rise of the Lollards. At the time when it was written, the disputes of the schoolmen had been extended to the field of theology, and they appear both in the writings of Wyclif and in those of his adversaries.

Wyclif's little bundles of tares are not less metaphysical than theological, and the conflict between Norminalists and Realists rages side by side with the conflict between the different interpreters of Scripture. The 'Fasciculi Zizaniorum' gives a good idea of the controversies which were carried on at the end of the fourteenth and the beginning of the fifteenth centuries.

Munimenta Gildhallæ Londoniensis. Liber Custumarum. Edited by Henry Thomas Riley, M.A., &c., &c., with translations of the passages in Norman-French, and glossaries. 2 vols.

This was compiled probably by various hands in the early part of the fourteenth century during the reign of Edward II. The manuscript, a folio volume, is preserved in the Record Room of the City of London; though some portion of it, in its original state, borrowed from the City in the reign of Queen Elizabeth, and never returned, now forms part of the Cottonian MS. Claudius D. II. in the British Museum. This work gives an account of the laws, regulations, and institutions in the City of London in the twelfth, thirteenth, and early part of the fourteenth centuries.

Munimenta Gildhallæ Londoniensis—Liber Albus; compiled by John Carpenter, Common Clerk of the City of London in the year 1419. Edited by Henry Thomas Riley, M.A. 2 vols.

The manuscript, a large folio volume, is preserved in the Record Room of the City of London. This work gives an account of the laws, regulations, and institutions of that City in the twelfth, thirteenth, fourteenth, and early part of the fifteenth centuries.

The Repressor of over much blaming of the Clergy. By Reginald Pecock, D.D., sometime Lord Bishop of Chichester. Edited by Churchill Babington, B.D., 2 vols.

The 'Repressor' may be considered the earliest piece of good theological disquisition of which our English prose literature can boast. The author was born about the end of the fourteenth century, was consecrated bishop of St. Asaph in the year 1444, and translated to the see of Chichester in 1450. While Bishop of St. Asaph he zealously defended his brother prelates from the attacks of those who censured the bishops for their neglect of duty. He maintained that it was no part of a bishop's functions to appear in the pulpit, and that his time might be more profitably spent, and his dignity better maintained, in the performance of works of a higher character.

Among those who thought differently were the Lollards, and it is against their general doctrines that the 'Repressor' is directed. Pecock took up a position midway between that of the Roman Church and that of the modern Anglican Church; but his work is interesting chiefly because it gives a full account of the views of the Lollards and of the arguments by which they were supported, and because it assists us to ascertain the state of feeling which ultimately led to the Reformation.

Apart from religious matters, the light thrown upon contemporaneous history is very small, but the 'Repressor' has very great value for the philologist, as it tells us what were the characteristics of the language in use among the cultivated Englishmen of the fifteenth century.

Pecock, though an opponent of the Lollards, showed a certain spirit of toleration, for which he received, towards the end of his life, the usual mediæval reward—persecution.

Narratives of the Expulsion of the English from Normandy, 1449-1450. Robertus Blondelli de Reductione Normannie. Le Recouvrement de Normandie, par Barry, Herault du Roy. Conférences between the Ambassadors of France and England. Edited, from MSS. in the Imperial Library at Paris, by the Rev. Joseph Stevenson, M.A., of University College, Durham.

We have here the narrative of an eye-witness who details with considerable power and

minuteness, the circumstances which attended the final expulsion of the English from Normandy in the year 1450. The history commences with the infringement of the truce by the capture of Fougères, and ends with the battle of Formigny and the embarkation of the duke of Somerset. The whole period embraced is less than two years.

Political Poems and Songs relating to English History, composed during the period from the Accession of Edw. III. to that of Ric. III. Edited by Thomas Wright, Esq., M.A., F.S.A. 2 vols.

These poems are perhaps the most interesting of all the historical writings of the period, though they cannot be relied on for accuracy of statement. They are very various in character; some of them are upon religious subjects, some may be called satires, and some give no more than a court scandal; but as a whole they present a very fair picture of society, and of the relations of the different classes to one another.

The period comprised is in itself very interesting, and brings us, through the decline of the feudal system, to what may be considered the beginning of our modern history. The songs in old English are of considerable interest to the philologist.

The Buik of the Chroniclis of Scotland; or, a Metrical Version of the History of Hector Boece. By William Stewart. Edited by William B. Turnbull, Esq. of Lincoln's Inn, Barrister-at-Law.

This is a metrical translation of a Latin Prose Chronicle, and was written in the first half of the sixteenth century. The narrative begins with the earliest legends, and ends with the death of James I. of Scotland, and the 'evil ending of the traitors that slew him.' Strict accuracy of statement is not to be looked for in such a work as this; but the stories of the colonisation of Spain, Ireland, and Scotland, are interesting, if not true; and the chronicle is valuable as a reflection of the manners, sentiments, and character of the age in which it was composed.

The peculiarities of the Scottish dialect are well illustrated in this metrical version of Boece's work, and the student of language will here find ample materials for comparison with the English dialects of the same period, and with modern lowland Scotch.

Letters and Papers illustrative of the Reigns of Richard III. and Henry VII. Edited by James Gairdner. Two vols. A collection of unpublished letters, state papers, and other documents referring to the transactions of these two reigns.

The papers are derived from MSS. in the British Museum, the Public Record Office, and other repositories, and were brought together by the editor after a protracted search. The period to which they refer is unusually desti-

tute of chronicles and other sources of historical information, so that the light obtained from these documents is of special importance. The principal contents of the volumes are some diplomatic papers of Richard III.; correspondence between Henry VII. and Ferdinand and Isabella of Spain; documents relating to Edmund de la Pole, Earl of Suffolk; and a portion of the correspondence of James IV. of Scotland.

Memorials of King Henry VII.: Bernard Andræ Tholosatis, de vita Regis Henrici Septimi Historia; necnon alia quædam ad eundem Regem spectantia. Edited by James Gairdner.

The contents of these volumes are—(1) a life of Henry VII., by his poet laureate and historiographer, Bernard André, of Toulouse, with some compositions in verse, of which he is supposed to have been the author; (2) the journals of Roger Machado during certain embassies on which he was sent by Henry VII. to Spain and Brittany, the first of which had reference to the marriage of the King's son, Arthur, with Catharine of Arragon; (3) two curious reports by envoys sent to Spain in the year 1505 touching the succession to the crown of Castile, and a project of marriage between Henry VII. and the Queen of Naples; and (4) an account of Philip of Castile's reception in England in 1506. Besides these, other documents of interest in connection with the period are given in an appendix.

Le Livre de Reis de Britannie e le Livre de Reis de Engleterre. Edited and translated by John Glover, M.A.

These two treatises, though they cannot rank as independent narratives, are nevertheless valuable as careful abstracts of previous histories, especially 'Le Livre de Reis de Engleterre.' Some various readings are given which are interesting to the philologist as instances of semi-Saxonised French.

It is supposed that Peter of Ickham must have been the author, but no certain conclusion on that point has yet been arrived at.

Chronicum Scotorum: A Chronicle of Irish Affairs. Edited by William M. Hennessy, M.R.I.A.

There is, in this volume, a legendary account of the peopling of Ireland and of the adventures which befell the various heroes who are said to have been connected with Irish history. The details are, however, very meagre both for this period and for the time when history becomes more authentic. The plan adopted in the chronicle gives the appearance of an accuracy to which the earlier portions of the work cannot have any claim. The succession of events is marked, year by year, from A.M. 1599 to A.D. 1150. The principal events narrated in the later portion of the work are the invasions of foreigners, and the wars of the Irish among themselves. The text has been printed from a

MS. preserved in the library of Trinity College, Dublin, and written partly in Latin, partly in Irish.

Liber Monasterii de Hyda; and a Chartulary of the Abbey of Hyde, in Hampshire, A.D. 455-1023. Edited by E. Edwards, Esq.

The 'Book of Hyde,' is a compilation from much earlier sources, which are usually indicated with considerable care and precision. In many cases, however, the Hyde chronicler appears to correct, to qualify, or to amplify—either from tradition or from sources of information not now discoverable—the statements which, in substance, he adopts. He also mentions, and frequently quotes from, writers whose works are either entirely lost or at present known only by fragments.

There is to be found, in the 'Book of Hyde,' much information relating to the reign of King Alfred which is not known to exist elsewhere. The volume contains some curious specimens of Anglo-Saxon and Middle English.

The War of the Gaedhil with the Gaill, or the Invasions of Ireland by the Danes and other Norsemen. The original Irish text. Edited, with translation and introduction, by James H. Todd, D.D., M.R.I.A., F.S.A.

The work, in its present form, is, in the editor's opinion, a comparatively modern version of an undoubtedly ancient original. That it was compounded from contemporary materials has been proved by curious incidental evidence. It is stated in the account given of the battle of Clontarf that the full tide in Dublin Bay on the day of the battle (April 23, 1014) coincided with sunrise; and that the returning tide in the evening aided considerably in the defeat of the Danes. The fact has been verified by astronomical calculations, and the inference is that the author of the chronicle, if not himself an eye-witness, must have derived his information from those who were.

The contents of the work are sufficiently described in its title. The story is told after the manner of the Scandinavian Sagas, with poems and fragments of poems introduced into the prose narrative.

Matthæi Parisiensis, Monachi Sancti Albani, Histøria Anglorum, sive ut vulgo dicitur Historia Minor. Item ejusdem Abbreviatio Chronicorum Angliæ. Edited by Sir Frederick Madden, K.H., F.R.S.

This work was written, as the chronicler tells us, in the year 1250. The history is of considerable value as an illustration of the period during which the author lived, and contains a good summary of the events which followed the Conquest. This minor chronicle is, however, based on another work (also written by Matthew Paris), which gives fuller details, and which has been called the 'Historia Major.' The chronicle now published, nevertheless, gives some information which is not to be found in the greater history.

Chronica Monasterii de Melsa a fundatione usque ad annum 1396, Auctore Thoma de Burton, Abbate. Accedit continuatio ad annum 1406, a Monacho quodam ipsius domus. Edited by Edward A. Bond, Egerton Librarian in the British Museum.

The Abbey of Meaux was a Cistercian house, and the work of its abbot is both curious and valuable. It is a faithful and often minute record of the establishment of a religious community, of its progress in forming an ample revenue, of its struggles to maintain its acquisitions, and of its relations to the governing institutions of the country. In addition to the private affairs of the monastery, some light is thrown upon the public events of the time, which are however kept distinct, and appear at the end of the history of each abbot's administration.

Only one volume of the work is at present published. It ends with the death of Richard of Ottringham, the seventh abbot, in the year 1225. The text has been printed from what is said to be the autograph of the original compiler, Thomas de Burton, the nineteenth abbot.

The Chronicle of Pierre de Langtoft, in French Verse. Edited by Thomas Wright, M.A., F.S.A., &c. Vol. i.

It is probable that Pierre de Langtoft was a canon of Bridlington, in Yorkshire, and that he lived in the reign of Edward I., and during a portion of the reign of Edward II. This chronicle is divided into three parts; in the first of which is an abridgment of Geoffrey of Monmouth's 'Historia Britonum,' in the second a history of the Anglo-Saxon and Norman kings, down to the death of Henry III., in the third a history of the reign of Edward I. The principal object of the work was apparently to show the justice of Edward's Scottish wars.

The language in which the chronicle is written is singularly corrupt, and is a curious specimen of the French of Yorkshire.

Descriptive Catalogue of Materials relating to the History of Great Britain and Ireland to the end of the Reign of Henry VII. By Thomas Duffus Hardy, Deputy Keeper of the Public Records.

The object of this work is to publish notices of all known sources of British history, both printed and unprinted, in one continued sequence. The materials, when historical (as distinguished from biographical), are arranged under the year in which the latest event is recorded in the chronicle or history, and not under the period in which its author, real or supposed, flourished. Biographies are enumerated under the year in which the person commemorated died, and not under the year in which the life was written. This arrangement has two advantages: the materials for any given period may be seen at a glance; and if the reader knows the time when an author

wrote, and the number of years that had elapsed between the date of the events, and the time the writer flourished, he will generally be enabled to form a fair estimate of the comparative value of the narrative itself. A brief analysis of each work has been added, when deserving it, in which the original portions are distinguished from those which are mere compilations. When possible, the sources are indicated from which such compilations have been derived. A biographical sketch of the author of each piece has been added, and a brief notice has also been given of such British authors as have written on historical subjects.

CALENDARS OF STATE PAPERS.

As early as the year 1800 a Committee of the House of Commons recommended that indexes and calendars should be made to the public records, and thirty-six years afterwards another Committee of the House of Commons reiterated that recommendation in more forcible words than those of the first Committee; but it was not until the incorporation of the State Paper Office with the Public Record Office that the present Master of the Rolls, Lord Romilly, found himself in a position to take the necessary steps for carrying out the wishes of the House of Commons.

On December 7, 1855, he stated to the Lords of the Treasury that although 'the records, state papers, and documents in his charge constitute the most complete and perfect series of the kind in the civilised world,' and although 'they are of the greatest value in an historical and constitutional point of view, yet they are comparatively useless to the public, from the want of proper calendars and indexes.'

Acting upon the recommendation contained in the Report of the House of Commons referred to above, he suggested to the Lords of the Treasury that to effect the object which he had in view it would be necessary for him to select from the literary world a few persons fully qualified to perform the work which he contemplated.

Their Lordships recognised the necessity of having these calendars prepared and printed, and they further empowered the Master of the Rolls to take such steps as might be necessary for this purpose.

The following calendars have been already published under his Lordship's directions:—

Letters and Papers, Foreign and Domestic of the Reign of Henry VIII., preserved in the Public Record Office, the British Museum, and elsewhere in England. Arranged and catalogued by J. S. Brewer, M.A. Vol. I., & Vol. II. (in two parts), from 1509 to 1518 inclusive.

These volumes contain summaries of all state papers and correspondence relating to the

reign of Henry VIII. now in the Public Record Office (formerly in Her Majesty's State Paper Office), and in the British Museum, the Libraries of Oxford and Cambridge, and other public libraries; and of all letters that have appeared in print in the works of Burnet, Strype, and others. In short, whatever authentic original material exists in England relative to the religious, political, parliamentary, or social history of the country during the reign of Henry VIII., whether despatches of ambassadors, or proceedings of the army, navy, treasury, or ordinance, or records of parliament, or appointments of officers, or grants from the crown, will be found in these volumes.

The Calendars of State Papers (Foreign Series) of the Reigns of Edward VI. and Queen Mary, from 1547 to 1558, in two volumes, by W. B. Turnbull, Esq., of Lincoln's Inn, barrister-at-law.

These volumes exhibit the negotiations of the English Ambassadors with the Courts of the Emperor Charles V. of Germany, of Henry II. of France, and of Philip II. of Spain. The affairs of several of the minor continental states here find various incidental illustrations of much interest.

The valuable papers descriptive of the circumstances which attended the loss of Calais merit a special notice. The progress of the wars in the north of France, into which England was dragged by her union with Spain, is narrated at some length. The domestic affairs of England are of course passed over in these volumes, which treat only of our relations with foreign powers.

A Calendar of the Domestic Papers of the Reigns of Edw. VI., Mary, and Elizabeth. Edited by Robert Lemon, Esq., F.S.A.

The first and second volumes are published, extending from 1547 to 1590.

Calendar of State Papers (Foreign Series), of the Reign of Elizabeth. Edited by the Rev. Joseph Stevenson, M.A., of University College, Durham.

These four volumes contain a descriptive catalogue of the foreign correspondence of Queen Elizabeth, from her accession, in 1558, to 1562, of which the originals, drafts, or contemporary copies, are deposited in the Public Record Office in London. These documents are of the greatest value as exhibiting the position of England at one of the most interesting periods of our history, in regard to our relations with France, Scotland, Spain, and Germany. They are also of especial importance as illustrating not only the external but also the domestic affairs of France during the period which immediately preceded the outbreak of the first great war of religion under the prince of Condé and the duke of Guise.

Mrs. Everett Green has completed *A Calendar of the Domestic Papers of the reign of James I.* in four volumes. The mass of historical matter thus rendered accessible to investigation is large and important. It throws new light on the following subjects—the Gunpowder-plot; —the rise and fall of Somerset; the particulars connected with the Overbury murder; the disgrace of Sir Edward Coke; and other matters connected with the reign of James I.

Calendar of State Papers (Domestic Series) of the Reign of Charles I., 1625–1636.
Edited by John Bruce, Esq., F.S.A. (9 vols., 1858–1866.)

This Calendar is in continuation of that of the Domestic State Papers of James I. It at present comprises only the first twelve years of the reign of Charles I., but is in active progress towards completion. It will extend to the Restoration of Charles II. It presents notices of a large number of original documents of great value to all inquirers into the history of the period to which it relates. Many of these documents have been hitherto unknown to men of letters.

The Calendar of the Domestic Papers of the Reign of Charles II., was commenced by Mrs. Everett Green in 1859.

Seven volumes, embracing the period between 1660 and 1667, have been published.

The Calendars above-mentioned relate to England. The following works has been undertaken for Scotland:—

Two volumes of State Papers relating to that portion of the United Kingdom, and embracing the period between 1509 and 1603, were edited by Mr. Markham Thorpe in 1858. In the second volume are notices of all the State Papers relating to Mary Queen of Scots now in the Public Record Office.

For Ireland the following works has been undertaken:—In the Series of the Calendars of State Papers published under the direction of the Master of the Rolls, one volume, embracing the period between 1509 and 1573, has been published under the editorship of Mr. Hans Claude Hamilton; and another volume, extending from 1574 to 1585, is nearly ready, and will be shortly published.

Mr. W. Noel Sainsbury is engaged on a Calendar of Colonial Papers. The first volume, relating to America and the West Indies from 1574 to 1660, was published in 1860. The second volume, relating to the East Indies, China, and Japan, from 1513 to 1616, appeared in 1862, and the third volume is now in preparation. This Calendar includes an analysis of all papers from the three great archives in the Public Record Office, the India Office, and the British Museum. The East India Papers in the Public Record Office are calendared to the year 1623; those relating to the same subject in the Domestic Correspondence to 1625; and in the Foreign Correspondence to 1620;

the Court Minutes of the East India Company to 1618, and the Original Correspondence in the India Office to 1617. A vast number of undated papers have likewise been dated and arranged.

Besides the works already mentioned, the attention of the Master of the Rolls has been called at various times to the extreme importance of certain documents in the archives and libraries of foreign countries.

It is well known that valuable papers are preserved at Simancas, at Venice, and at Paris, containing the correspondence of ambassadors in England with their respective courts—a correspondence without the knowledge of which no satisfactory history of this country could be written.

In the year 1861, Mr. Bergenroth was appointed to compile a Calendar of Papers at Simancas, and Mr. Rawdon Brown, in 1862, at Venice. The importance of their researches, and the favour with which they have been received by the public, justify the belief that the small annual grant placed by the Treasury at the disposal of the Master of the Rolls for these purposes has been most judiciously applied.

Mr. Bergenroth is engaged in compiling a Calendar of the Papers relating to England preserved in the archives of Simancas in Spain, and the corresponding portion removed from Simancas to Paris. It has been deemed essential to the completion of his work that Mr. Bergenroth should visit Madrid, and examine the papers there bearing on the reign of Henry VIII. Mr. Bergenroth's first volume, published in 1862, contains the Spanish papers of the reign of Henry VII., and his second volume will embrace the papers of the first portion of the reign of Henry VIII.

Of the papers in the Venetian archives, Mr. Rawdon Brown has already published one volume of his *Calendar*, extending from 1202 to 1509, and has made considerable progress in his second volume. Mr. Brown's researches have brought to light a number of important documents relating to the various periods of English history, and his contributions to our historical literature are of the most interesting and important character.

Two volumes of a *Calendarium Genealogicum* have also been published under the editorship of Mr. Charles Roberts. It is a work of great value for elucidating the early history of our nobility and landed gentry.

Liber Censualis, commonly called *Domesday Book*.

This important and unique survey of the greater portion of England* is the oldest and

* For some reason left unexplained, many parts were left unsurveyed; Northumberland, Cumberland, Westmoreland, and Durham, are not described in the survey; nor does Lancashire appear under its proper name; but Furness, and the northern part of Lancashire, as well as the south of Westmoreland, with a part of Cumber-

most valuable record in the national archives. It was commenced about the year 1084, and finished in 1086. Its compilation was determined upon at Gloucester by William the Conqueror, in council, in order that he might know what was due to him, in the way of tax, from his subjects, and that each at the same time might know what he had to pay. It was compiled as much for their protection as for the benefit of the sovereign. The nobility and people had been grievously distressed at the time by the king bringing over large numbers of French and Bretons, and quartering them on his subjects, 'each according to the measure of his land,' for the purpose of resisting the invasion of Cnut, King of Denmark, which was apprehended. The commissioners appointed to make the survey were to enquire the name of each place; who held it in the time of King Edward the Confessor; who was the present possessor; how many hides were in the manor; how many ploughs in demesne; how many homagers; how many villeins; how many cottars; how many serving men; how many free tenants, how many tenants in soccage; how much wood, meadow, and pasture; the number of mills and fish-ponds; what had been added or taken away from the place; what was the gross value in the time of Edward the Confessor; the present value; how much each free-man or soc-man had; and whether any advance could be made in the value. Thus could be ascertained who held the estate in the time of King Edward; who then held it; its value in the time of the late king; and its value as it stood at the formation of the survey. So minute was the survey, that the writer of the contemporary portion of the Saxon Chronicle records, with some asperity—'So very narrowly he caused it to be traced out, that there was not a single hide, nor one virgate of land, nor even, it is shame to tell, though it seemed to him no shame to do, an ox, nor a cow, nor a swine was left, that was not set down.'

Domesday Survey is in two parts or volumes. The first, in folio, contains the counties of Bedford, Berks, Bucks, Cambridge, Chester and Lancaster, Cornwall, Derby, Devon, Dorset, Gloucester, Hants, Hereford, Herts, Huntingdon, Kent, Leicester and Rutland, Lincoln, Middlesex, Northampton, Nottingham, Oxford, Salop, Somerset, Stafford, Surrey, Sussex, Warwick, Wilts, Worcester, and York. The second volume, in quarto, contains the counties of Essex, Norfolk, and Suffolk.

Domesday Book was printed *verbatim et literatim* during the last century, in consequence of an address of the House of Peers to King George III. in 1767. It was not, how-

land, are included within the West Riding of Yorkshire. That part of Lancashire which lies between the Ribbles and Mersey, and which at the time of the survey comprehended 688 manors, is subjoined to Cheshire. Part of Rutland is described in the counties of Northampton and Lincoln.

ever, commenced until 1773, and was completed early in 1783. In 1860 Her Majesty's government, with the concurrence of the Master of the Rolls (Lord Romilly), determined to apply the art of photozincography to the production of a facsimile of the whole of the Domesday Survey, under the superintendence of Colonel Sir Henry James, R.E., director of the ordnance survey at Southampton, who had devoted himself to the improvement of that scientific process. The work was completed in 1863.

Facsimiles of National Manuscripts.

The first part extends from William the Conqueror to Henry VII., and contains autographs of the kings of England, as well as of many other illustrious personages famous in history, and some interesting charters, letters patent, and state papers. The second part, for the reigns of Henry VIII. and Edward VI., consists principally of holograph letters and autographs of kings, princes, statesmen, and other persons of great historical interest, who lived during those reigns.

Reports of the Deputy Keeper of the Public Records.

By Act of Parliament made and passed 14th August, 1838, entitled 'An Act for keeping safely the Public Records,' it is enacted that 'the Deputy Keeper of the Records, under the direction of the Master of the Rolls, shall once in every year report to Her Majesty the proceedings had in the execution of this Act; and every such report shall be signed by the Deputy Keeper of the Records, and Master of the Rolls, and shall be laid before both Houses of Parliament.'

In compliance with this Act, the Reports of the Deputy Keeper have been annually made and laid before Parliament. They usually include, in addition to the statement of proceedings in the Public Record Office, appendices containing inventories and calendars of records made during each year to which they relate, and refer to documents interesting and useful to the public generally. They have been found especially valuable in assisting persons engaged in genealogical, topographical, and antiquarian pursuits, and are of great practical use to Government departments having papers deposited in the Public Record Office.

The volume sent to the Paris Exhibition contains the Reports of the present Deputy Keeper of the Public Records, with an index, extending from 1862 to 1865 both inclusive.

Report of the Deputy Keeper of the Public Records to the Master of the Rolls, upon the Venetian Archives.

Report of the Deputy Keeper of the Public Records and the Rev. J. S. Brewer to the Master of the Rolls, upon the Carte and Carew Papers in the Bodleian and Lambeth Libraries.

ROMILLY, M.R.

SCIENCE AND ART DEPARTMENT, SOUTH KENSINGTON, LONDON.

BOOKS AND NEW EDITIONS OF BOOKS PUBLISHED IN GREAT BRITAIN DURING 1866.

A few observations may, perhaps, be permitted here, as introductory to an exhibition unique, it is believed, in its character, and of singular significance. It consists of the books printed in Great Britain and Ireland during the year 1866.

It was a suggestion of the Imperial Commission that Her Britannic Majesty's Commissioners should cause to be prepared for exhibition some sort of compendious history of the social progress of Great Britain during the past ten years. If this proposal had been as practicable in its nature as it was vast and comprehensive in its design, or if Her Majesty's Commissioners had had already enlisted and awaiting their command, a staff of encyclopedists as rarely gifted as that celebrated corps whose genius once shed a dazzling glare upon the illustrious country which produced them—the result might, perhaps, have been (but scarcely in time for the Exhibition) a series of volumes exhibiting—in order to be even portable—a phenomenon of compression to achieve which some application of intellectual hydraulics has yet to be contrived. The history of a nation's progress is the history of its mechanical arts and manufactures; of its sciences abstract and applied; of its railroads and its telegraphs; its commerce, its finance, its laws; its ever varying social customs; its literature, its amusements, its religion, and a thousand other elements in civil life, for the enumeration of which time and space are not enough. The accomplishment, therefore, of the proposed compilation within anything like convenient limits was held to be impracticable. But, forasmuch as all the topics just adverted to, and which in fact constitute a nation's history, are more or less directly dealt with by the various emanations of the press, it was believed that to submit for exhibition the entire produce of the British press in the last completed year would be no inconsiderable contribution towards, or substitute for, the compendium suggested. From one year's books it is not difficult to draw the most important historical inferences respecting the preceding decade; and there can be scarcely a more trustworthy or intelligible evidence and index of the progress a nation has been making than the books it is producing. Hence the collection of near 5,000 volumes here presented.

For securing this collection in the readiest and most effective way, recourse was naturally had in the first instance to persons eminent in the trade. From various causes, however, needless to detail, difficulties were found to interpose themselves in the way of concerted professional action by the publishers. But as no such hindrance betrayed itself as likely to embarrass their co-operation with the state, the charge of making the collection devolved upon

the department which, from its relations with the Paris Exhibition, could most conveniently sustain it.

From the preceding remarks it will have been gathered that the object of this collection was not so much to make a typographical display in its merely mechanical and industrial sense as to present at one view, accessible to closer and individual inspection, if required, the entire *supply*, inferring therefrom, proximately at least, the entire *demand* in this department of British enterprise within the limits of a single year. The object is intellectual, material, literary, and commercial. Accordingly the endeavour has not been to secure books of the cleanest, the clearest, and the most conspicuous types; illustrated by the most exquisite embellishments, and dressed in the most decorated bindings—though there will be found in the collection not a few specimens of binding, of embellishment, and typography such as, perhaps, no other country can excel—but the aim has been to secure a copy of every publication whatever, however imposing and however trivial (excepting periodicals, which have been otherwise and most competently provided for), the only condition of acceptance being, that it should be the *bonâ fide* produce of the year specified.

In fulfilment of this project, towards the close of the past year proposals were addressed—so far as it was possible to obtain their names and addresses—to every publisher in Great Britain and Ireland, inviting their sympathy and co-operation in this which was represented to them, not as a commercial scheme, but as a national enterprise. It was suggested to them to promote the purpose of Her Majesty's Commissioners by contributing, each publisher for himself, the loan, for exhibition, of a copy of every work which he had published during the year prescribed.

There is no section of the commercial—or, indeed, of any other department of the community—which has more largely enjoyed, or more honourably merited, that respect, esteem, and pride, with which England regards her mercantile denominations than the guild of publishers. Amply consistent with their high repute was the promptitude, the courtesy, the substantial liberality of their response to this appeal. They fully understood that the particular exhibition proposed was to be not so much a trade display as a national phenomenon. As a commercial body they had comparatively little interest (in the less exalted sense of the word interest) in this miscellaneous method of presenting their productions to the eyes of the world. The pride of each firm in its own mercantile celebrity appeared to be extinguished by that of the printer in his craft. The contributions to the collection, which

poured in from every House, almost without exception, were overwhelming in number, valuable in amount, and, it must be added, for the most part very handsome in appearance; and it was gratifying to observe that of the 184 contributors to this loan of books, many of which were of very costly character, not one requested or suggested any special prominence of position for his own contingent; not one appeared to regard the British book display of 1866 as anything more contracted in its scope and dimensions than an exhibition of national intellect, intelligence, and enterprise.

It might seem invidious to select names for special mention where all have behaved with indistinguishably obliging liberality. But it would be almost the prudery of impartiality to decline allusion to the varied and valuable loans of Messrs. Blackie and Son; or Messrs. Bell & Daldy; or those from the long-renowned emporium of social romance in Burlington-street. Nor is it anything less than a phenomenon of the 19th century which we discern in the indescribably miscellaneous, but exceedingly interesting popularities issuing from Belle Sauvage-yard; from the neighbouring press of Messrs. Routledge; from the three firms of Messrs. Nelson and Son; Nimmo; and Oliver & Boyd of Edinburgh, with those of Messrs. Duffy, and Messrs. Richardson of Dublin. The classical batch of Messrs. Whittaker can scarcely escape observation; nor that of Messrs. Macmillan, whose name may indicate every kind of publication excepting what is worthless. The consignments—not more various than valuable and important, of Messrs. Chapman & Hall; Smith & Elder; Sampson Low & Son; of the Religious Tract Society; and of the Society for Promoting Christian Knowledge, were amongst those most courteously and promptly sent. The loan of Mr. Hotten is distinguished as one of the most quaint and curious, as is that of Messrs. Day & Son for its artistic brilliancy. The ponderous and costly Bibles and Prayer Books from the Oxford Press, from Messrs. Eyre & Spottiswoode, and from Messrs. Bagster, present magnificent specimens of typography; and the Faculties of Law and Physic are liberally represented, the latter by Messrs. Churchill, and the former by Messrs. Stevens. Want of space compels the suppression of several names which it seems a kind of injustice to omit; but nobody will grudge a grateful allusion to the contribution of Messrs. Longman—exceeding in magnitude and importance even what might have been expected—or to that from Albemarle Street more celebrated through the larger part of a century for its famous publishing House than for its palatial hotels and its patrician mansions.

It will be observed that the contributing publishers amount in number to 184; of these 141 are metropolitan, and 43 provincial. Of the metropolitan, Dublin furnishes 2; Edinburgh 6; London 133. The volumes contributed from the provinces amount to 335; those from Dublin to

129; from Edinburgh to 279; and from London 4,009. The aggregate number of volumes is 4,752 and their value at selling prices about 1,500*l*.

In disposing of the 4752 volumes lent by 184 contributors, it would obviously have been impracticable that works of such exceedingly miscellaneous size and character, should be arranged so as to exhibit them severally as the productions of their respective publishers. Most of the groups, moreover, thus discriminated would have been too small for such separate and independent exhibition without a disregard of symmetry which would have been an eyesore. They have been sorted, therefore, according to subject; keeping together those of every individual publisher so far as was practicable; but not sacrificing all propriety of appearance to the fancy of maintaining an unbroken fellowship and proximity for the productions of the same press.

The subjoined classification of the subjects of the exhibited volumes of the year, although not, perhaps, absolutely and perfectly complete as an exact exposition of what that year has produced, indicates, probably, with tolerable correctness and even with proximate precision, the proportions of the various departments of publication upon which the Press has been employed. Thus, though some very few or very obscure volumes of history, of science, of poetry, or of prose-fiction, published during the year may not have been received, it is not likely that such omissions in any single branch should be so numerous as to disturb its relative position with regard to others, or lead to any seriously fallacious estimate as to their respective proportions to the rest. But when it is considered that the generally computed number of publications in the year was about 4,200, and that, after the careful exclusion of duplicates and volumes bearing an earlier date, we have accumulated not fewer than 4,752, it seems hardly likely that many of the year's productions can have been withheld. It would be rash to guarantee that where several duplicates and works of previous date have attracted attention and so have been rejected, a very few may not have *escaped* it, and so have been admitted; but it may safely be asserted that the number of such volumes accidentally retained and included in the above total, must be so exceedingly small as not appreciably to affect any statistical inferences which might be desired.

In computing any such statistics in connection with the literary activity of Great Britain, it may be superfluous to remark that a considerable number of the volumes hereafter classified must be eliminated before a residuum of literature properly so called can be arrived at. Educational works, for instance, which from the baby's picture book to the most recent treatise on the Differential Calculus, are only the mechanism and the means and preparation for literature and science can with no more

propriety be called literature than the text books and reports of law and physic can be called the actual practice and administration of those faculties. It not unfrequently occurs, indeed, that in able hands the dryest scientific subject becomes bedewed by the humour of genius, and the line of distinction referred to is consequently sometimes difficult to trace. But, generally speaking, if we strike out mechanical arts, commerce, directories, agriculture, and all that claims but slender connexion with literature proper, it is probable that of 4,752 volumes not more than half will remain to be classed with History, Biography, Travels, Prose-Fiction, Poetry, a small proportion of religious writing and a few other kinds to which we usually ascribe the name of literature.

An observation will be afterwards made upon the importance and the difficulty of ascertaining the proportion of reprints to new publications. There is one subject, however, in which the difficulty is somewhat less and the interest perhaps, somewhat greater of attaining this proportion than in others. In poetry the new publications are so very few that of 500 volumes attributed to the past year, 5 per cent. new ones would be a liberal calculation, leaving 475 reprints. Of the reprints of deceased authors in a single year it is a little curious to observe the proportions:—

Chaucer	2	editions
Shakspeare's plays	15	"
" smaller poems . . .	6	"
Dryden	2	"
Butler	2	"
Milton	8	"
Pope	5	"
Thomson	4	"
Goldsmith	7	"
Gray	3	"
Cowper	13	"
Wordsworth	8	"
Scott	12	"
Southey	1	"
Rogers		
Crabbe		
Campbell		
Moore	8	"
Shelley	3	"
Byron	11	"

Of living poets, or of those but recently deceased, such a return as the above would be alike invidious and fallacious.

With regard to reprints generally it may be observed that while a precise and trustworthy estimate would be exceedingly difficult—without other means, at least, than those at immediate command—considerable pains have been taken to arrive at some proximate conclusion; and it is believed that the following will not be far from correct for the past year.—

New publications	3399
Reprints	1353
Total publications . . .	4752

It would be interesting if the difficulty just

adverted to could be so far surmounted as to ascertain the circulation of different classes of books in different classes of society, as an element in judging of the prevailing taste and intellectual condition of the community. But since it is the reprints alone which indicate the actual demand for books, except so far as it may be vaguely inferred from the supply, and since it would be laborious to a degree almost impracticable, to distinguish with precision republications from first editions, no pretension is here made to any minute and unimpeachable conclusion of this kind. It may, however, be stated generally that large numbers of readers are found for standard works of poetry and fiction, and that well known books of devotion command a ready and a steady sale. Among poets, Shakspeare, Milton, Pope, Goldsmith, Thomson, Cowper, Burns, Moore, Wordsworth, Scott—and, notwithstanding an impression in some quarters to the contrary, Byron, appear to be perused, if perusal may safely be inferred from purchase, by each successive generation. That great series of Romances which have now survived their wondrous author five-and-thirty years, continue to sustain an undisputed celebrity, which more recent competitors are generous enough to emulate without envy. They are now republishing in an extraordinarily cheap form, and appear to be penetrating into a lower stratum of society than that for which they were originally intended; and sixpence will now procure, printed in pleasantly legible type, the entire story of Waverley, of Jeanie Deans, of Old Mortality, or Ivanhoe, which less than 'sixty years since' was eagerly purchased at a guinea and a half. It may be conjectured that in theological literature the old and well known works still enjoy a popular preference. Of the large number of original compositions included in the present list, many are collections of sermons written for the purpose of delivery and only incidentally printed. Printed, it is true, "by desire"; a desire, no doubt, within its professed range, in every case, sincerely and affectionately entertained; but purchased,—if such an inference from the apparently scanty proportion of reprints be not unwarrantable,—more out of local and personal considerations than from any vehement impatience in the general public to possess them. To this conjecture there are, of course, several brilliant, admirable and obvious exceptions. But apart from such exceptions this is a case of artificial cause for a supply which may be supposed considerably to exceed the demand. The much smaller number of books of controversial divinity is addressed to a limited audience; and many of them originate in zeal for the propagation of particular doctrines rather than the hope of profit or of literary fame. Prayers, hymns, and generally manuals of devotion, scarcely fall within the category of literature. New publications in verse represent a craving for fame or for sympathy on the part of the writers

rather than a general appetite for poetry. It is well known that excepting in the case of a few eminent writers, volumes of poems are printed at the expense of the author, as publishers have no sufficient hope of remuneration to induce them to undertake the risk. Thus theology—especially controversial theology—and poetic composition prove the intellectual activity of writers; but excepting when new editions are required, the number of such works is but an uncertain or even a fallacious clue to the taste and appetites of readers.

The lighter branches of literature are fortunate in a nearer approach to an equilibrium between demand and supply, so that either may be regarded as a pretty correct exponent of the other. History, and the materials of history, consisting of biographical memoirs and recollections, are generally written or compiled in order to be read. The same remark applies to voyages and travels, and especially to fiction. Novels, tales, and romances (including those adapted to more youthful readers) form about one *fifth* part; and, even independently of the juvenile portion, they form a *ninth* part of the total publications of the year; and the number of copies *circulated*, and presumably, therefore, read, would bear a much larger proportion than this to the entire issue of books. If this were the place for discussing the comparative value of different kinds of literature, it might probably appear that the appetite for fiction is the simplest, as it is the earliest and most universal form of the appetite for knowledge; and that novels, in teaching something of life and character through the attractive auxiliaries of plot and incident, reach a superficial audience that very likely would read nothing else. As has already been remarked, the commercial activity of publishers is most spirited and enterprising; especially when it is considered not only that newspapers and other periodicals exceed the rank and file of books in circulation, as much as novels outnumber philosophical discourses—but that the average newspaper is now itself a volume of history, biography, social incident, and miscellaneous information—possibly sometimes of fiction—of no inconsiderable bulk. Even the books which are not strictly literary works are interesting as modes of intercommunication among classes or professions which have in many cases intellectual interests. The conversation of multitudes can only be carried on in print, and the rapidity and variety of their utterances bear a certain relation to spontaneous energy on one side and to receptive intelligence on the other. Silence is no doubt divine. But its throne is on the alpine granite peaks, or among the stars; or, in any case, at some considerable altitude above the children of Eve and their busy working world; and rigorously maintained as a persistent habit here below, this sublime reticence would conduce little to the sympathy or to the mutual improvement of mankind. Books are our greatest and most effective speakers; their

audiences are the largest and their voices reach the farthest.

As in political economy the distribution of wealth is not less important than its creation, the diffusion of knowledge by numerous publications, adapted to all degrees of intelligence, may be as useful as discovery or original thought. Criticism censures plagiarists, and holds up to unsparing ridicule the dealers in common place: but for the great purposes of popular instruction, second-hand learning is as good as if it were derived immediately from the source. There is not one of the 4,752 volumes in this Exhibition which is not capable of teaching some reader something; and the range of human apprehension is so varied and extensive, that it is possible that each book, the most childish or the most abstruse, would communicate with some individual mind in the most intelligible way by which that mind is accessible. Food for mind as well as food for body requires bulk as well as nutritive essence; and the quality of the vehicles in which that essence will be most effectively conveyed to the various tastes, and appetites, and digestions, and assimilations of the *tot sententiæ* of mankind will vary—perhaps infinitely; but certainly it will vary to a degree incalculably exceeding the variety—the contrasts—the heterogeneity of the 4,572 volumes herewith presented as the substantial representative of the produce of the British Press in the year 1866.

W. H. BROOKFIELD.

South Kensington Museum,
March, 1867.

SCIENCE AND ART DEPARTMENT.

REPORTS PUBLISHED BY THE CHARITABLE, BENEVOLENT, AND VOLUNTARY SOCIETIES AND INSTITUTIONS OF GREAT BRITAIN AND IRELAND.

A collection of these Reports will be found arranged under Group X. Class 89.

SOUTH KENSINGTON MUSEUM, LONDON.

SPECIMENS OF THE PERIODICAL AND EPHEMERAL LITERATURE PUBLISHED IN THE UNITED KINGDOM DURING THE YEAR 1866.

There has been no attempt made, up to this time, to represent literature in any of the great exhibitions which have been held in London and Paris. Typography merely, natural produce, manufactures, and art, have all figured on such occasions, but literature (perhaps because of its being a thing the essential part of which it was so difficult to exhibit) has till now invariably been omitted on every occasion when an exhibition of the sort has been held.

On November 8, 1865, the French Minister of Public Instruction, addressed a report to the Emperor, in which he urged strongly that some attempt should be made, on the occasion of the Paris exhibition of 1867, to represent those less material results of our civilisation which, though not so brilliant and startling to the eye as the achievements of science or the productions of art, are, perhaps in some respects, as important as either the one or the other. Acting upon the suggestion contained in these words, The Committee of Council on Education decided that, on the occasion of this great exhibition at Paris, an attempt should be made to show, practically, and by that strongest of all appeals, an appeal to the senses, what literature has done, and is doing, towards advancing the civilisation of the English people.

The Collection of Books has been made by the Rev. W. H. Brookfield. The present collection is one of periodicals of all kinds. It would have been possible, no doubt, within the limits of a report such as this to have given in figures the statistics of our periodical literature. It would have been possible to state that so many newspapers were published weekly or daily within the limits of the British dominions, or that such and such were the numbers of our religious, scientific, commercial, or other periodicals. But would this have given to any one of us so distinct an idea of the scale on which the periodical literature of this country has developed itself as is conveyed by this exhibition of the printed sheets themselves, displayed in numbers before our eyes?

It is believed that this is the first time that such a collection as this has been made, or at any rate exhibited. No doubt it fails in some

respects of being complete, but no pains have been spared to make it so, and the result is, it will be admitted, sufficiently remarkable. Of newspapers alone there are here between 1100 and 1200 different specimens, all in active circulation at the same time. Of these about 700 are provincial, that is to say they are newspapers published in our country towns. Many of these towns support more than one journal. In Liverpool for instance there are no less than 15 newspapers published. There are 7 in Birmingham and the same number in Bristol and Brighton. In addition to these there are 42 Welsh papers, about 135 Scotch, and about 125 Irish. The London newspapers, daily and weekly, are about 45 in number; but in making this statement it must be understood that the word newspaper is used only in its strictest sense, and that immense numbers of journals which deal with some special subject, or appeal to some special section of the public are not included. Theological papers such as the Record, the Guardian, or the Tablet; Commercial newspapers as the Economist or the Money Market Review; Sporting and Theatrical periodicals such as Bell's Life or the Era; Local journals representing the different districts of London and the suburbs, the Islington Times, for instance, or the Bayswater Chronicle, none of these, nor even such political and general periodicals as the Spectator or the London Review, are included among what are here spoken of as the London Newspapers. If a large interpretation were given to the term and such class-journals as have been alluded to above were included among the regular newspapers, the numbers of these last would be swelled to three or four times the amount at present set down under that heading. It has appeared, however, more advisable in classifying the present collection of newspapers and periodicals to remove those journals which treat of special topics from among the ordinary newspapers and to place them according to the subjects to which they relate—Religious, Scientific, Artistic, and the like. Cases containing all the periodical publications on each of these subjects which it has been possible to collect from all parts of the British dominions, will be found in the space

devoted to English Literature. These cases are numbered and on referring to the corresponding number in this appendix, the contents of each will be found set down in order, the title of every work exhibited being given at length. The collection has been made on an essentially non-exclusive plan, and it will be found to contain as nearly as may be, everything, from the most richly illustrated work on hot-house flowers to the street ballad and from the Quarterly Review to the halfpenny journal.

In each department, the whole of the literature which refers to the subject treated of will be found. In the religious department, e.g. all forms of religion are represented. Here are Church of England publications, Roman Catholic periodicals, and Religious journals of all kinds. Baptists, Methodists, Independents, even the followers of Swedenborg, and Lady Huntingdon have specimens of their literature here. The same principle applies to each one of the classifications in medicine, philosophy, political economy; all sorts of antagonistic factions have contributed the organs which contain their opinions. Homeopaths, Allopaths, Vegetarians, Tee-totallers, Slave Emancipators, Spiritualists, are all exhibitors in this department. Children, even, have a literature of their own, and are richly provided with periodicals published for their exclusive benefit. Some of these are addressed to mere infants, there is an 'Infant's Magazine,' a 'Child's Own Magazine,' a 'Child's Friend,' and some others, obviously intended for the youngest of literary students. There are nearly fifty magazines and other periodicals kept up exclusively for the benefit of boys and girls. Many, indeed, are the curious and interesting particulars which are brought to light by such a collection. Few people, probably, know that many of our different trades are represented by their own newspapers. There is a bakers' journal; there are exclusive newspapers published for the benefit of the grocer; the oilman; the draper; the ironmonger; the chemist and druggist. There exists, moreover, a 'Pawnbrokers' Gazette,' and a journal of Gas-lighting, and an Anti-tobacco Protest periodically issued. Curiously organised systems for the distribution of periodical literature are revealed also in the course of such investigations. Numerous associations for the publication of serials intended to improve mankind are in existence in various parts of England. Institutions such as the 'Wesleyan Conference Society,' the 'Young Man's Christian Association,' the 'Army Scripture Reader's and Soldier's Friend Society,' the 'London Society for Promoting Christianity among the Jews,' the Religious Tract and the Peace Societies send out all sorts of 'Sundays at Home,' 'Heralds of Peace,' 'British Flags,' 'Christian Sentinels,' and 'Jewish Intelligencers.' And then for the practical work of disseminating such periodicals there are such bodies as the 'Book Hawking Society,' by means of which people are supplied with cheap literature at their own houses. And

here seems the proper place to make some brief mention of a little-known publishing agency called the Number Trade, some of whose publications are included in this collection. It is represented by some three or four houses, and is somewhat peculiarly constituted. They seek no publicity for the works they issue, which are mainly republications, elaborately got up and illustrated, of standard works; they never advertize, and intrust the sale of their publications exclusively to certain persons, who act as a kind of commercial travellers to the trade, and who carry specimens of the publications of the Number Trade about with them, soliciting subscriptions in every town in Great Britain.

In preparing this collection, particular attention has been given to the department of 'low' literature, if the term may be allowed. The purlieus of St. Giles', such regions as the New Cut, or the Waterloo-road, have been made to give up their stores, and it is a curious but somewhat satisfactory fact that the amount of distinctly pernicious and indecent literature which such researches have revealed is very small, and is found to be continually on the decrease. High flown tales, abundantly seasoned with mysterious and exciting incidents; tales of rapine and bloodshed, dazzling descriptions of luxurious banquets, and stimulating accounts of midnight revels, mixed up with various charnel-house details, no doubt abound. Not wholesome reading, perhaps, but not so degrading or injurious as they might be. It must be remembered that we are dealing exclusively with periodicals. Detached publications of an immoral tendency are unhappily not uncommon, but the public will not support such when issued at regularly recurring intervals, and any attempt to introduce a newspaper or magazine of this kind is soon found to be unsuccessful. Nor has London alone been ransacked for curiosities of literature; many of our provincial towns having also, been made to supply us with specimens of their local publications. There are no longer now any periodicals, properly so called, printed in the Lancashire dialect, nor in Gaelic, though both have existed very recently, but there are several in the Welsh language, and Ireland has supplied us with some strange specimens of literature, such as the 'Ghost of Watty Cox,' and 'Paddy Kelly's Diary' and other characteristic eccentricities.

In concluding this preliminary notice, it should be mentioned that this collection is much indebted for any completeness it may have attained to the exertions of Mr. John Francis, a gentleman whose name is well-known in connection with periodical literature, and who has co-operated with me very zealously.

CHARLES ALSTON COLLINS.

SOUTH KENSINGTON MUSEUM, LONDON.

ART LIBRARY.

No part of the museum at South Kensington is of more importance than the National Art Library. An institution for the promotion of art education must be greatly indebted to a good selection of books and engravings to supplement the teaching of the schools. In the latter the hand of the student alone is formed. The time required to master the mechanical difficulties of drawing and painting absorbs the attention during the hours devoted to study, and it is in the student's own time that the

abstract principles of his art must be acquired. What the schools do for the hand the library does for the head and the imagination.

The department has, therefore, been furnished with a library and reading-room. The books have been collected during the last thirteen years, and form, on the whole, an excellent representation of a library for the purposes in question. There is, in addition, a large assortment of drawings, engravings, and photographs, some of the former being framed

and hung in the museum. Special attention has been paid, as well with regard to the books and the drawings and engravings, as to the representation of what may be called decorative art. Thus, amongst the drawings may be numbered the admirable original drawings of Lewis Grüner for his works on the churches and palaces of Italy; while among the books will be found a careful representation of German art and decorative engravings. The German books in the library were selected by Professor Semper, under the direction of his Royal Highness the late Prince Consort, who was well versed in this branch of German literature.

The library, though far from complete, is well provided with large and costly works on foreign galleries, and great pains are taken to collect all important county histories, topographies, or other similar works illustrative of the scattered monuments of mediæval or 16th century architecture in England. It contains many valuable works illustrated by plates and cuts, and a number of old works from the presses of Central Europe of which the value lies in their typographic decorations and woodcuts, examples greatly needed in days so active, in this phase of art, as our own.

A pressing difficulty, felt in all great and growing libraries, is the want of a complete catalogue. It is obvious that if books are always on the increase, any catalogue, however careful, will have to be pulled to pieces for fresh entries, as fast as it is issued from the press.

Great pressure has been put upon the Executive of the British Museum at various times to insist upon the production of a printed catalogue from that noble library. The discussions to which these questions have given rise are of much interest, and may be said to have exhausted the subject. Two printed catalogues have been issued from that institution, but the last went no further than the letter A. It was found impossible to publish a catalogue that could be reliable at the date of publication and *retain its reliability* from the causes already specified. Five thousand books are said to issue from the British press in one year. If these alone, without reckoning the works and whole collections purchased in the market, are added to the existing list, it can be easily seen what becomes of every page of the catalogue.

The period has come in the growth of the National Art Library at which this difficulty is very seriously felt. Two catalogues have been published, and the later of these is now almost out of date as regards the existing collection. As much more of the real catalogue is in MS. My Lords have therefore decided to make an effort to overcome this incessant difficulty by cataloguing, once for all, all the books in the library, and all that ever could belong to it; in other words, all the works that such a library could want, the whole literature of art, with a full represen-

tative collection of book-illustration of all periods.

This would form an universal catalogue of art books and illustrated books, and if completed would be not only a permanent key to the National Art Library, but a standard of what such libraries ought to contain, and would prove a solid acquisition to the whole of the literary world.

Accordingly, in the year 1863, steps were taken for the commencement of such a work, and a number of noblemen and gentlemen of all countries were invited to give their countenance and help to a work that promised to be of interest to other nations besides ourselves, and would form the first example of a catalogue giving the titles of all art books ever undertaken hitherto.

To this invitation the most encouraging answers have been received, and the preliminary work has been begun and carried on in earnest under the direction of the referee for libraries and catalogues of the department, Mr. J. H. Pollen, as editor.

All published catalogues of any importance were analysed, beginning with that of the existing library as a foundation, together with the larger and more important works on bibliography.

But published catalogues are rare. Many large collections of books, the libraries, for instance, of Paris, Vienna, Dresden, Berlin, the Vatican, and many others being without any. That of the imperial library of Paris is in process of publication, but the portion relating to the fine arts is not yet issued.

Of the Vatican library the collection of Count Cicognara, alone, is furnished with a printed catalogue. But there remain numbers of large collections all over Europe and the United States of America, unprovided in this respect.

The British Museum Library, the most admirably arranged and catalogued in Europe, unequalled in its arrangements for the accommodation of readers, for whose comfort such liberal provision has been made, has, at present, no printed catalogue. The result of many enquiries and discussions has been the completion of a catalogue in MS., filling between 12 and 1300 folio volumes, which are made to keep pace with the growth of the library.

For the preparation of the Universal Catalogue recourse has been had, in the last instance, to this MS. The authorities of the Museum have afforded every facility, and the vols. have been searched one after the other, and all titles, not found in the compilation above named, have been noted down, the books examined, and the titles retained of all works bearing in any way on the theory, history, and criticism of art; or of special works of art, and all illustrated books, either of merit in themselves, or that represented schools, periods, or nations that have produced book

art of this nature ; or engravings intended for publication in the form of books.

Here it must be stated that the catalogue of this last class of books cannot be exhaustive, as in the case of the books constituting the *Literature of Art*, which are the primary and indispensable subject matter of an *Art Library* or collection. Such a catalogue would be without reasonable limit.

But all acknowledged book illustrators, and artists such as Dürer, Holbein, Callot, and others, who have issued sets of engravings intended for binding with or without letter press, are intended to be fully represented as far as relates to *such works*. Inferior artists, representing schools formed on the traditions of these or other masters, will be sufficiently represented. The same rule may be laid down as to modern designers, such as Stodhart, Flaxman, Bewick, or Cruikshank in our own country, or Gustave Doré and others on the Continent.

We shall hope, indeed, to see complete catalogues of the works of such artists, as has been done in the case of the Bewicks. Much of such work may not have appeared in books, and not therefore be matter for the catalogue. It will be only under very generally recognised names that *all books* illustrated by particular artists would be catalogued. Different nations have a standard in this respect more or less generally recognised as regards its own artists, and it is hoped that each country will decide as to what names, or what books, do or do not represent this interesting phase of its national

attainments, or what names or books are required to supply the deficiency in the pages of the catalogue.

It remains only to state that, with the consent of a majority of the council of advice, summoned to decide the question, it was judged expedient to put out in a rough form, the proofs or sheets containing all the titles of books already compiled before proceeding to digest a work so imperfect.

Much must still be gathered from the records of distant libraries and collections, and many works already catalogued could not be seen by the editor or his assistants.

It was further resolved to try and obtain the help of the wide circulation of a popular journal for the fullest publication of this preliminary matter.

Arrangements have been made accordingly, for its insertion in the columns of the 'Times,' and it is intended that the letter A should be exhibited in the literary department of the British portion of the Great Exhibition of this year in Paris.

It is hoped that all who take an interest in art, as well as all true friends of literature, will lend a kindly aid to perfect a work the first of its kind, and forward information regarding art books not in the catalogue to the editor, S. Kensington Museum, London, s.w., who will forward to any contributor a form with the headings required regarding titles of books suggested for insertion.

J. H. POLLEN.

SPECIMENS OF A UNIVERSAL ART INVENTORY.

The full title of this work is as follows: Notes for A Universal Art Inventory of Works of Fine Art, which may be found throughout the continent of Europe, for the most part in Ecclesiastical Buildings, and in connection with Architecture: compiled for the use of the South Kensington Museum and the Schools of Art in the United Kingdom. Edited by HENRY COLE, C.B., Director of the South Kensington Museum, and Secretary of the Science and Art Department.

Preface.

1. With a view of enabling the Department of Science and Art to obtain reproductions of the finest examples of art in foreign countries, Earl Russell in February 1864, on the motion of Earl Granville, the Lord President of the Council at that date, addressed to Her Majesty's representatives at Paris, Dresden, Berlin, Munich, Turin and Rome, a request that they would obtain printed catalogues of the great galleries, of art museums and of collections of ornamental art, including examples of skilled workmanship, which now exist in the chief cities

of continental Europe, in order that such information when collected and arranged may be for the mutual benefit of this and of foreign countries.

2. In reply to this application catalogues and other information were transmitted from Rome, Berlin, Munich, Turin, Naples, Milan, and other cities in Italy.

3. These catalogues for the most part refer to collections being the property of the respective states which are exhibited in public museums and galleries, but do not afford information respecting monuments or collections in the treasures of the cathedrals, churches, monasteries, &c.

4. It was proposed that the inventory contemplated in Lord Granville's letter should be classed like the Art Inventory in the South Kensington Museum, under the divisions recited in the following letter.

5. It has been thought expedient to commence the notes for this universal inventory with those objects which, not being collected and exhibited in public galleries, involve trouble in finding them. The present notes refer

largely to objects being portions of the architectural decorations of public buildings.

6. Towards collecting this information the wishes of the Committee of Council on Education in the first instance were made known publicly, and advertised in the useful handbooks published by Mr. Murray, but scarcely any information was obtained by this mode, and it was finally determined to collect such information as might be possible from various publications so as to form a basis, however imperfect.

7. Such information will then be addressed to persons specially acquainted with each class of objects, in order that it may be amplified and corrected by them.

8. Mr. Murray with public spirit gave permission to have notices of objects extracted from his series of valuable handbooks, which undoubtedly is the most compendious source from which they could be obtained; other publications have been examined, but the work must only be considered as a beginning, and has no pretensions to completeness, and notices of objects which are omitted will be thankfully received. Inventories for the following classes of objects have been compiled:—

Mosaics; glass painting; enamels; works in metal; jewellery and decorative objects in precious materials; arms, armour, and accoutrements; wood carving. The other classes are in preparation.

Correspondence, &c., relating to the Interchange of Reproductions of Works of Art with Foreign Governments.

February 8, 1864.

MY LORD,—I have the honour to inclose for your lordship's information the copy of a Minute (see previous Minute) of the Committee of Council on Education, and, in reference to it, to solicit your lordship's assistance in procuring for the use of the department of science and art copies of all printed catalogues of the great galleries of art, museums, and collections of ornamental art, including examples of skilled workmanship, which now exist in the chief cities of continental Europe.

2. Such information will, I feel assured, prove highly useful for the guidance of the officers of this department, as well as of the officers of other public institutions, by informing them of the great examples which now exist, and the places of their deposit, assisting them when such objects are offered for sale, and guarding them against spurious imitations, which are now executed with the greatest ingenuity and skill.

When carefully digested and arranged (which is contemplated as part of the proposal) the combined inventory would form an appropriate offering to the institutions which have contributed to its formation, and might also be made more extensively useful by its publication with the other similar works circulated by this department.

3. This information, sought by means of your lordship's assistance, does not refer to collections of natural history or to objects the merit of which consists only in their great antiquity or rarity, or to objects which may be vulgarly called curiosities, but solely to works of fine art or art workmanship.

These may be classed as:—

1. Sculpture; 2. Medals and engraved gems; 3. Mosaics; 4. Painting; 5. Japanned or lacquered work; 6. Glass painting; 7. Enamel; 8. Pottery; 9. Glass manufactures; 10. Works in metal; 11. Watches and clocks; 12. Jewellery and decorative objects in precious materials; 13. Arms, armour, and accoutrements; 14. Furniture, &c.; 15. Leather work; 16. Basket work; 17. Textile fabrics; 18. Bookbinding and book decoration generally.

4. Galleries of fine art and museums of every class are finding a rapid development throughout Europe, and increased attention is paid to the objects which they contain. They are not by any means confined to the seats of government where Her Majesty's ministers are in residence, but they would be readily pointed out by the scientific men usually connected with the government.

They may be generally described as:—

- A. The private collections of the sovereign and in the royal palaces, but opened for public inspection.
- B. The state or public collections.
- C. The collections of the church, in the treasuries of cathedrals, churches, monasteries, &c.
- D. The collections of towns, guilds, and municipalities in their halls.
- E. Well-known collections of private individuals which are heirlooms of a permanent character.

5. In cases of collections where the articles are of rare excellence, and a catalogue has not been printed, this department would willingly defray such moderate charge as might be incurred for a manuscript list of the most select objects.

6. I hope, from the importance I attach to this proposal, that it may meet with your warm concurrence, and that your lordship will be pleased to enlist the earnest assistance of Her Majesty's ministers at foreign courts in giving a full development to the undertaking, and I shall be happy to give directions that they may be supplied with the catalogues of this museum, and receive any assistance and facilities here which may be requested on their part for any scientific persons who may visit it.

I have, &c. (Signed) GRANVILLE.
The Secretary of State for Foreign Affairs.

Instructions to Her Majesty's Representatives at Dresden, Paris, Munich, Berlin, Turin, and Rome, dated Foreign Office, Feb. 17, 1864.

MY LORD [OR SIR].—I have received from the president of the committee of council on educa-

tion a request for assistance in procuring for the use of the department of science and art copies of all printed catalogues of the great galleries of art, museums, and collections of ornamental art, including examples of skilled workmanship, which now exist in the chief cities of continental Europe.

The precise nature of the objects of art which the committee have in view is stated in their letter, of which I enclose a copy for your more complete information, and in which are further pointed out the collections where the objects of which a catalogue is desired may be found, and the sources from which information on the subject may be obtained.

You will further perceive that in certain cases the committee would be prepared to defray any moderate charge for manuscript lists of objects of rare excellence.

I have now to instruct you to take such steps as you may consider best calculated for carrying out the wishes of the committee, as explained in their letter, so far as the galleries and collections of [Saxony] are concerned, and in so doing you will cause to be made known to the various institutions from which information is requested the desire of the commission that such information, when collected and arranged, may be for the mutual benefit of this and of foreign countries.

I am, &c. (Signed) RUSSELL.

Information was accordingly sent from Munich, Berlin, Turin, and Rome.

At South Kensington, the 8th day of Feb. 1864.

By the Right Honourable the Lords of the Committee of Her Majesty's most Honourable Privy Council on Education.

Memorandum on the International Exchange of Copies of Works of Fine Art.

1. The collections of the South Kensington Museum now possess many examples of works of fine art, executed in various kinds of materials, which are unique for their beauty, excellence, and rarity.

2. In like manner most of the art museums of the continent contain similar works.

3. Such objects must always remain permanently as national treasures of the respective countries possessing them.

4. Although the originals cannot be acquired, various modes of reproduction are now matured and employed, such as electrotyping, photography, elastic moulding, &c., whereby admirable substitutes may be easily obtained with perfect security to the originals.

5. The important national art museums at Paris, Berlin, Dresden, Munich, &c., already possess plaster casts of ancient marbles representing originals which are not in their own possession. But no comprehensive system appears yet to have been matured of employing electrotyping or photography to obtain copies of objects.

6. A commencement of issuing duplicates of fine objects useful in general art instruction, however, has been made by the South Kensington Museum. For example, through the intervention of His Royal Highness the Prince Consort, copies have been obtained of the numerous works of fine art in the possession of Her Majesty the Queen. Through the liberality of His Majesty the Emperor of the French the science and art department was enabled in 1855, during the Paris Exhibition, to obtain electrotypes and photographs of numerous objects in the Louvre and Musée d'Artillerie at Paris. Photographs also have been taken of the most important objects which for public instruction and gratification were so liberally lent to the department by private proprietors during the International Exhibition of 1862. The University of Oxford unreservedly has permitted photographs to be taken of its original drawings by Michael Angelo and Raffaele. Arrangements now exist at the South Kensington Museum by which every object of art collections may be copied by some one of the many processes.

7. The period, therefore, seems to have arrived when friendly relations might, with reciprocal advantages, be established between foreign museums and the South Kensington Museum for the purpose of organising some system of an international exchange of copies of the finest works of art which each museum possesses, and I would venture to submit that the Lords of the Committee of Council on Education should sanction an application to Her Majesty's Secretary of State for Foreign Affairs with this view, and request his lordship to bring the subject before the governments of the various countries which possess museums and works of art.

8. The accompanying art inventory of the South Kensington Museum shows the nature of the objects already the property of the museum. Many objects of exceptional beauty and rarity might be copied, and the nature of the copies has been indicated in the inventory. These might be deemed worthy of the acceptance of the museums of other countries. At the same time it may be observed that every object named in the inventory might be copied if desired.

9. I recommend that a copy of this catalogue should be forwarded to Her Majesty's ministers abroad, through the foreign office, to be delivered to the various governments. A request should be made to such governments to forward to the South Kensington Museum any printed or MS. catalogues of their own museums, in which the objects excellent and rare might be denoted in a similar way. Opportunity might be taken to inquire if the respective governments would be disposed to entertain the idea of an exchange of copies of objects, and if they should concur in the idea to ask them to authorise the various directors of museums to communicate directly with the Lords of the Committee of Council on Education at the South

Kensington Museum. HENRY COLE, Secretary and General Superintendent.

South Kensington Museum, Feb. 8, 1864.

Illustrations of the international system of reproduction, which it is the aim to establish, are exhibited in Class 8 of the Paris Exhibition.

ART INVENTORY OF MUSEUM.

From the first formation, in 1852, of the Collection of Art Objects, then exhibited at Marlborough House, and which has since developed into the Art Collection now at the Museum at South Kensington, it has been the practice to furnish catalogues for the use of the public. At first these catalogues went somewhat into detail, and brief critical notices were given of the more important examples, together with sketches of the history of the various branches of art illustrated by the museum. In order, however, to keep pace with the rapid increase of the collection, and at the same time to confine the catalogue within due limits, it became necessary to make the notice of each object as brief as possible, stating merely its name, material, country, date, dimensions, and cost. The catalogue thus took the form of an inventory. It was arranged under eighteen divisions, and new acquisitions were from time to time inserted as new editions were called for. In accordance with the rule of the museum that no object shall be exhibited without a label, this inventory was so arranged as to admit of its being cut up and mounted for this purpose, thus enabling the public to read by the side of each object all the information which would be obtained by reference to the inventory itself; and, since 1863, it has been the practice to print additions to the inventory page by page at frequent intervals, and to supply copies on card for use as labels.

In a preface to this inventory added in December 1863 it was announced that a new edition was about to be prepared in which the arrangement in divisions would be discontinued. It had for some time been determined that a careful revision of the inventory should take place with a view to the compilation of a final and unalterable record, a domesday book of the museum, so to speak, by which the year of acquisition, the cost, and the dimensions of every object in the museum at the time of such compilation might be settled for all future reference. The verification of these particulars was accordingly taken in hand, and at the same time the revision of the descriptions was

entrusted to various gentlemen. A large mass of material having been prepared, a Minute was passed by the Board of the Department of Science and Art on January 19, 1866 (Earl Granville, K.G., being Lord President of the Council), assigning the compilation of an art inventory from this material to an officer of the museum, and directing that each entry should as far as possible state:—I. The nature of the object; II. Its material; III. Title or description; IV. Country; V. Date; VI. Size; VII. Condition, if necessary; VIII. Whether presented or purchased, and if the latter, the cost; IX. Number in register, and year of acquisition.

Eight parts of this new inventory are now in type for the years 1852 to 1859, each part being complete in itself, and containing the acquisitions for the one year to which it is devoted. This arrangement under separate years was fixed on as the only one which admits of the acquisitions of each future year being systematically added without delay and without the necessity of re-arranging the material already in print. Beyond its value as a permanent record, and its use for labelling purposes, for which it has been carefully adapted, this inventory is to be viewed as material from which catalogues may hereafter be compiled. Being arranged according to the years in which the objects are acquired it is chiefly useful for official reference, but it readily admits of re-arrangement upon any plan which may be wished, either according to alphabetical order, country, date of production, or material.

It may be added that the inventory is independent of special catalogues or guides to the museum which may appear from time to time. Descriptive catalogues of the objects in various branches of art contained in the Museum are contemplated. One of this series, 'The Italian Sculpture Collection in the South Kensington Museum,' by J. C. Robinson, F.S.A., was published in 1862; the Catalogue of Textile Fabrics, by Dr. Rock, is already in print, and awaits only the completion of preface and indexes; that of ornamental bronzes is also written, as well as those of stained glass, bookbinding, MSS. illuminations, with portions of other collections, some not full enough to justify the immediate preparation of their catalogues for the press. It is intended that these special catalogues shall be illustrated by chromolithography and photography. A number of careful drawings have already been prepared for that of the textile fabrics, and are now in the hands of the chromolithographers.

REPORT ON THE COLONIAL NEWSPAPERS EXHIBITED IN PARIS, 1867.

At the time when the collection of Periodical Literature now exhibiting in Paris was in course of formation, application for contributions of newspapers and periodicals was made to the Governments of such of our Colonies as seemed likely to possess any literature of this class. These applications were met with ready promises of co-operation; but up to the time when it became necessary to close the collection, in order to send it to Paris, only a very few such specimens had arrived. Some of our colonies have, however, included a certain small number of newspapers among the objects which they have sent over for exhibition at Paris; and of these it seems desirable, in order to make our list of Periodicals, published in the British dominions, as complete as possible, to make some mention in this place.

As might be expected, the colony of Victoria exhibits a greater number of newspapers than any other. There are, in all, thirty-three, eight of which are published in Melbourne. The following is a list:—

Age (daily).	Creswick and Clunes Advertiser.	Maryborough and Dunolly Advertiser.
Age (weekly).	Economist.	St. Arnaud Mercury.
Argus.	Federal Standard.	St. Kilda Telegraph.
Australasian.	Geelong Advertiser.	South Bourke Standard.
Ballarat Star.	Gippsland Chronicle.	Tarrangown Times.
Banner of Belfast.	Gippsland Guardian.	Taradale Express.
Beechworth Constitution.	Inglewood Advertiser.	Warnambool Advertiser.
Belfast Gazette.	Journal of Commerce.	Weekly Advertiser.
Bendigo Advertiser.	Leader.	Western Times
Bendigo Gazette.	Majorca and Carisbrook Independent.	Williamstown Chronicle.
Castlemaine Advertiser.		
Clough's Circular.		
Clunes Gazette.		

South Australia exhibits eighteen newspapers, the last four of which, on the list, are in the German language.

Adelaide Express.	South Australian Chronicle.	Weekly Mail.
Adelaide Observer.	South Australian Government Gazette.	Blätter für Ernst und Scherz
Bordu Watch.	South Australian Register.	Blumenlese.
Bunyip.	Southern Argus.	Süd-Australische Zeitung.
Kapunda Herald.	Telegraph (Adelaide).	Tanunda Deutsche Zeitung.
Mount Gambier Standard.	Wallaroo Times	
South Australian Advertiser.		

The Indian periodicals are the next in number to the South Australian. The collection is, however, very incomplete, a considerable number of specimens, which should have been exhibited in Paris, having been forwarded to the Indian Museum in London. Some native journals, native

books, illuminated MSS., calendars, and other publications, in the vernacular, are included in this collection. The following are the newspapers :—

Coimbatore Gazette.	Poona Observer.	Travancore Government Ga-
Godavery District Gazette.	Shevagunga Zemindary Ga-	zette.
	zette.	Trichinopoly Journal.

New Zealand sends three newspapers only, all of which are published in Auckland :—

Daily Southern Cross.	New Zealand Herald.	Weekly Herald.
-----------------------	---------------------	----------------

The Mauritius exhibits 'Mauritius Government Gazette,' certain reports of local societies, and various pamphlets, the whole described in their catalogue as 'Ephemeral Publications of Mauritius.'

Trinidad contributes one newspaper, 'Port of Spain Gazette,' and printed extracts from two others, the 'Chronicle,' and the 'Star of the West.'

Of the Prince Edward's Island publications, a complete display is shown in the 'Collection of Literature' exhibited by the South Kensington Museum. The other colonies exhibiting at Paris send in some instances—as in the case of New South Wales and Queensland—directories, bound books, and some other contributions of a literary sort, but no Periodicals, properly so called.

COLLECTION OF NEWSPAPERS, JOURNALS AND PERIODICALS

PUBLISHED IN THE COLONY OF VICTORIA.

- WILSON & MACKINNON, Melbourne
Periodicals and scientific papers
- WILLIAMS, W. H., Melbourne
Ephemeral literature

SPOTTISWOODE & CO., *New-street-square, London, E.C.*

PRINTERS BY APPOINTMENT TO HER BRITANNIC MAJESTY'S COMMISSIONERS FOR THE
PARIS UNIVERSAL EXHIBITION OF 1867.

A Latin-English Dictionary. By the Rev. John T. White, M.A., and the Rev. J. E. Riddle, M.A.

The second edition of a copious work, founded on Dr. Andrews's translation of Dr. Freund's 'Wörterbuch der Lateinischen Sprache;' but, by the addition of new words and new meanings of words, one-third larger than the original work. It is printed on thin strong paper and with full-face small-bodied type, cast expressly for the work.

Sophoclis Tragediæ superstites. Recensuit et brevi Annotatione instruxit Gul. Linwood M.A. Editio tertia.

Printed with a bold-faced type, of the character termed Porson Greek.

Treatise on the Differential Calculus, and on the Method of Infinitesimals. By Bartholomew Price, M.A.

Exhibited to show a clear mode of printing algebraical formulæ.

Public School Latin Primer.

An elementary Latin book lately introduced into the English Public Schools.

A Card of Greek Syntax. By Rev. F. W. Farrar.

Printed with Greek types, of which the firm of Spottiswoode & Co. possess nineteen different sizes and varieties.

The Parish Chant-Book. By George F. Chambers, F.R.A.S.

A collection of single and double chants, and a few miscellaneous compositions, printed in music types, at the ordinary hand-press.

Life of Josiah Wedgwood. By Eliza Meteyard. 2 vols.

This work is profusely illustrated with woodcuts, drawn from the originals in the possession of various collectors, and executed with exquisite care and taste.

The Sea and its Living Wonders.

The Tropical World.

These works were translated into the English language by the author, Dr. Georg Hartwig, of Göttingen, and are illustrated with Chromo-xylographs, or wood-cuts printed in colours at the ordinary hand-press. The 'rainbow tint,' as shown in the Cotton Field, is obtained by the careful distribution of the different coloured inks on the slab so as to make them blend into one another at the given points with one rolling.

Tauler's Life and Sermons. Translated by Susannah Winkworth; and a Preface by Rev. C. Kingsley.

The life and some of the more important sermons of Doctor John Tauler, an eminent preacher of Strasburg in the fourteenth century. Printed in types cast from old English matrices; the head and tail pieces from cuts between one and two centuries old.

Diary of Mary Countess Cowper, Lady of the Bed-Chamber to the Princess of Wales. 1714-1720.

A MS. left by the first Lady Cowper, printed in old-cut types and with veritable head and tail pieces of the early part of the eighteenth century.

Ecce Homo: a Survey of the Life and Work of Jesus Christ.

The fifth edition of this celebrated work.

St. Augustine's Manuell, or little Booke of the Contemplation of Christ.

A reprint of the edition of John Day, a famous printer, in black letter, and with facsimiles of the original border-cuts in the taste of the Elizabethan age.

Dictionary and Grammar of Egyptian Hieroglyphics. By S. Birch, Esq., LL.D. (forming part of the fifth volume of Baron Bunsen's 'Egypt's Place in Universal History,' 5 vols.)

This Dictionary and Grammar form the most comprehensive and valuable work hitherto printed for the student of the ancient Egyptian language. The types were drawn, engraved, and cast in London, to nonpareil ems in width and depth for easy justification; and include a larger number of Hieroglyphic Characters than have ever before been prepared for the printing-press in any country in Europe.

The First Book of the Hitopadêsa, containing the Sanskrit Text with interlinear transliteration, Grammatical Analysis, and English Translation.

Mahratti New Testament.

Printed for the British and Foreign Bible Society in the Mahratti language, from types cast in matrices struck in India.

Icelandic Bible.

Printed for the British and Foreign Bible Society, with types cast for the work.

Ningpo New Testament.

Printed for the British and Foreign Bible Society. The first instance in which any portion of the Scriptures has been printed in the Chinese language in Roman types. The adaptations and modifications were specially prepared for this work.

Tahitian Bible.

Printed for the British and Foreign Bible Society. The Tahitian language is remarkable for its immense use of vowels and its mellifluous feebleness.

New Testament, in modern Greek.

Printed for the British and Foreign Bible Society, in small Greek types cast for the work.

The History of Our Lord, as exemplified in Works of Art. Begun by the late Mrs. Jameson, and completed by Lady Eastlake. 2 vols.

These volumes form part of a Series of beautiful works on the literature of Christian Art, of which they may be regarded as the natural close. They are abundantly illustrated by drawings on wood and steel by the best artists, copied from the works of the most eminent masters, ancient and modern, and printed carefully with the finest ink.

Ballads and Legends of Cheshire. Edited by Major Egerton Leigh.

A collection of ballads and legends of the county of Cheshire, illustrated with wood engravings, and printed with fine ink on ribbed paper.

The Ballad Book. By William Allingham.

A popular collection.

Recreations of a Country Parson. By A. K. H. B.

An illustrated edition of a popular work, printed with modern Elzevir types upon toned paper.

Sentiments and Similes of William Shakspeare.

A classified selection of similes, definitions, descriptions, and other remarkable passages in the plays and poems of Shakspeare. Printed in the style of decorative printing of the Shaksperian age. The chromo-lithograph border of page 1 was printed in Paris.

Law Journal.

A leading weekly newspaper, containing legal news and notes of cases decided in the Law Courts during the week before publication.

Combes's Ready Writer.

Printed at the Spottiswoode steam press from glyphograph plates prepared specially for this series.

Sutton's Spring Catalogue and Amateur's Guide for 1867.

A catalogue of seeds of vegetables, fruits, and flowers, circulated all over the world.

The Publishers' Circular.

A record of all works published in Great Britain, and every work of interest published abroad. A large number is printed and issued on the 1st and 15th of every month, and an illustrated number like the one here exhibited, every Christmas.

Notes and Queries: a Medium of Intercommunication for Literary Men, General Readers, &c.

A valuable publication, commanding a great sale among all persons interested in science, literature, and art.

Saturday Review.

One of the most able of the weekly political, social, and literary reviews published in London. Printed from stereotype plates, taken by the papier maché process.

Specimens of some of the Types in use in Messrs. Spottiswoode & Co.'s Printing Office.

In this book are exhibited specimens of six kinds of Hebrew, one of Etruscan, one of Ethiopic, one of Inscription Greek, nineteen of Greek of various sizes and shapes, two of Sanskrit, one of Hindustani in Persian characters, one of the same language in Roman characters (according to the Anglo-Indian orthography), one of Persian in the Taleek character, one of Arabic (with the necessary modifications for Persian, Hindustani, Turkish, Malay, and Pushtu), one of Bengali, one of Russian, one of Tamul, one of Syriac, one of Coptic, one of Irish, five of Anglo-Saxon, two of German, two of Swedish, and three of Music types.

A *Specimen Book of Jobbing Types* is likewise exhibited.

The above books are exhibited to show the variety of work done in a large London Printing Office, which employs more than 500 hands, having in use upwards of 230 tons of type, 2 steam engines, 22 steam printing machines, and 27 hand-presses, besides proof- and galley-presses.

CLASS VII.

SAUNDERS, T. H., *Lyons Wharf, near Queenhithe, Upper Thames-street, London, E.C.*

Machine Mills—Phoenix and Hawley Mills, Dartford, Kent. Hand Made or Vat Mills—Darent and Sundridge Mills, Kent; Beech Mill, Wycombe, March; Rye Mill, High Wycombe, Bucks. Town Offices and Warehouse—Lyons Wharf, near Queenhithe, Upper Thames-street, London, E.C.

Manufacturer of Bank Note, Bond, Share Certificate, Debenture, Cheque, and Special Papers of every description, Plain and Water-marked; Account Book, Drawing, Writing, Plate, Printing, Blotting, Chart, Lithographic, Coloured, and other Papers.

Fabricants de Papiers pour Billets de Banque, Obligations, Certificats d'Actions, Chèques, et pour usages spéciaux, uni et à filigrane; Papiers pour Régistres, à Dessiner, à Écrire, pour Planches, à Imprimer, Brouillard, pour Cartes, à Lithographier, de Couleur, et autres.

First Class Medals obtained at the Great Exhibition, London, 1851; New York, 1853; Paris, 1855; London, 1862.

Attention is first directed to the papers made by hand and watermarked, the peculiar strength and durability of which has caused them to be adopted for all purposes where those qualities are especially valuable; as for example, bank notes, government loans, share certificates, policies of insurance, &c. &c.

Bank Notes.—This establishment has for a long series of years been engaged in the production of the bank notes in circulation in most parts of the world, and has been entrusted with the orders of many Foreign Governments. An examination of the specimens of elaborate and artistic watermarking exhibited in Group II. Class 7, is especially requested.

Hand-made papers for account books are next worthy of notice, as on the skill and care bestowed upon their manufacture depends the durability of the books made of them. These papers, marked 'T. H. SAUNDERS' or 'C. WILMOT' have for many years been celebrated for the possession of this most requisite quality.

Machine papers are made of all kinds and qualities, comprising the finest account book and writing papers, printings, white and coloured, patent cheque papers chemically prepared to prevent falsification, plate, lithographic, blottings white and coloured, cartridge, papers for card makers and newspapers.

Médailles de Première Classe à la Grande Exposition de Londres, 1851; à New-York, 1853; Paris, 1855; Londres, 1862.

L'attention est d'abord appelée sur les papiers fabriqués à la main et à filigrane, que leur force particulière et leur durabilité ont fait adopter pour tous les usages dans lesquels ces qualités sont spécialement précieuses; tels, par exemple, que billets de banque, emprunts de gouvernements, certificats d'actions, polices d'assurance, etc. etc.

Billets de Banque.—Cet établissement se livre depuis de longues années à la fabrication des billets de banque en circulation dans la plus grande partie du monde, et beaucoup de Gouvernements Étrangers l'ont favorisé de leur confiance sous ce rapport. On est prié d'examiner spécialement les spécimens de filigrane élaboré et artistique exposé dans le Groupe II. Classe 7.

On citera en suite comme dignes d'attention les papiers faits à la main pour registres, la durabilité de ces dernières dépendant de l'habileté et du soin avec lesquels ont été fabriqués les papiers qui les composent. Ces papiers, à la marque 'T. H. SAUNDERS' ou 'C. WILMOT,' sont renommés depuis nombre d'années pour ces qualités si nécessaires.

Papiers à la mécanique de toutes sortes et qualités, y compris les plus beaux papiers pour registres et à écrire, à imprimer, blancs et de couleur; papiers pour chèques à préparation chimique pour empêcher la falsification; papiers pour planches, à lithographier, brouillard blancs et de couleur, papier-cartouche, et papiers pour fabricants de cartes et journaux.

ROWNEY, GEORGE, & CO., 29 Oxford-street, London, w.

Artists' Colours and Materials—*Couleurs et Articles pour Artistes.*

Farben und Materialien für Maler—*Colori e Materiali per Artisti.*

The case contains specimens of oil and water colours, ground extra fine by steam-power. The superiority of this mode of grinding colours for artists' use will become evident by a comparison of them with colours prepared by manual labour. The oil colours of Messrs. G. ROWNEY & Co. will be found finer, brighter, less oily, and quicker in drying; and their water colours finer, brighter, and more even in washing than colours otherwise prepared. Among the colours exhibited, the attention of artists is particularly directed to the intensity of beauty of the madders; to a new and permanent yellow, made from nitrate of cobalt; to a very beautiful and permanent green, made from the oxide of chromium; and to a new preparation of Prussian blue made exclusively by G. ROWNEY & Co., which is quite permanent.

In Class 7 are exhibited a few specimens of their productions in chromo-lithography, consisting of copies, drawings, and paintings.

Leur vitrine renferme des spécimens de couleurs à l'huile et pour l'aquarelle, broyées extra fines à la vapeur. La supériorité de cette méthode de broyer les couleurs à l'usage des artistes deviendra évidente par une simple comparaison de celles ainsi broyées avec d'autres préparées à la main. On trouvera les couleurs à l'huile de MM. G. ROWNEY et C^{ie}. plus fines, plus brillantes, moins huileuses et plus promptes à sécher; et leurs couleurs pour l'aquarelle aussi plus fines, plus brillantes, et plus égales en lavant que celles autrement préparées. Parmi les couleurs exposées l'attention des artistes est particulièrement appelée sur l'intense beauté des garances; sur un jaune nouveau et solide, fait de nitrate de cobalt; sur un vert magnifique et très-solide, fait avec l'oxide de chrome; et enfin sur une nouvelle préparation de bleu de Prusse, produit exclusif de G. ROWNEY et C^{ie}., d'une solidité parfaite.

Dans la Classe 7 sont exposés quelques spécimens de leurs productions en chromolithographie, consistant en copies et peintures.

Der Schaukasten enthält Proben von Oel- und Wasserfarben, welche extrafein durch Dampfkraft gerieben sind. Die Ueberlegenheit dieser Methode, Farben für die Zwecke der Malerei zu reiben, wird augenscheinlich werden, wenn man sie mit den durch Handarbeit geriebenen Farben vergleicht. Man wird die Oelfarben der Herren G. ROWNEY & Co. feiner, scheinender, nicht so ölig und schneller trocknend und ihre Wasserfarben feiner, glanzvoller und gleichförmiger im Auftragen als auf andere Weise präparierte Farben finden. Unter den ausgestellten Farben wird die Aufmerksamkeit der Maler besonders gerichtet auf den hohen Schönheitsgrad der Krappfarbe; auf ein neues und fortdauerndes Gelb, von salpetersaurem Kobalt gemacht; auf ein sehr schönes und fortdauerndes Grün, von Chromiumoxyd gemacht; und auf eine neue Zubereitung von Berlinerblau, welches ausschliesslich von ROWNEY & Co. gemacht wird und vollkommen fortdauernd ist.

In Klasse 7 sind einige Proben ihrer Erzeugnisse in Chromolithographie, aus Copien und Gemälden bestehend, ausgestellt.

La cassetta contiene saggi di colori a olio de acquarello, macinati extra fini a vapore. La superiorità di questo modo di macinar i colori diviene evidente comparandoli con quelli preparati a mano. I colori ad olio dei Sigr. G. ROWNEY & CIA. si troveranno più fini, più lucenti, meno oleosi, e più prontamente essiccanti, e i loro colori a aquerello più fini, più lucenti, e più uniti nel distendersi che i colori preparati altrimenti. Frai colori esposti si invitano gli artisti a dare speciale attenzione alla bellezza delle robbie, ad un giallo nuovo e permanente ottenuto dal nitrate di cobalto; ad un verde bellissimo e permanente ottenuto dall' ossido di cromo, e ad un nuovo blu di Prussia fatto esclusivamente da G. ROWNEY & CIA. che è perfettamente permanente.

Alla Classe 7 sono esposti alcuni saggi delle loro produzioni cromolitografiche consistenti in copie e bozzetti.

WARD, MARCUS, & CO., MINERVA WORKS, BELFAST.

FIRST PRIZE MEDALS.

LONDON, 1862.
DUBLIN, 1865.

BY APPOINTMENT

TO H. R. H. THE PRINCE OF WALES.
ROYAL WARRANT, 1863.

CERTIFICATES OF MERIT.

LONDON, 1851.
DUBLIN, 1849.

CLASS VII. No. 43.—IRISH LINEN PAPERS AND ACCOUNT BOOKS.—Papers made of unworn linen, celebrated for purity, colour, surface, texture, made in fifty varieties.

ACCOUNT BOOKS made of Irish linen papers. Superior in style, finish, strength of sewing, neatness and novelty of external and internal construction; open perfectly flat. Specimens of engraved monograms and heraldic devices.

PAPIER DE TOILE D'IRLANDE.—Papier fabriqué de toile neuve, célèbre par sa pureté, surface, et tissu, en cinquante sortes différentes.

LIVRES DE COMPTES en papier de toile d'Irlande. Joignent à une grande solidité de couture, élégance et nouveauté de fabrication à l'intérieur, comme à l'extérieur; s'ouvrent de manière à présenter une surface parfaitement unie. Monogrammes et dessins héraldiques, gravés.

CLASS XXVI.—FANCY LEATHER GOODS.—Useful and ornamental articles, intended for presentation to H.I.M. the Emperor of the French, H.R.H. the Prince of Wales, the Princess of Wales, &c. Elegant desks, despatch boxes, and illuminated leather work, 'The Jockey Club' betting-books, portemonnaies, pocket books, jewel boxes, tourist cases, &c.

CLASS VII. No. 43.—BOOKBINDING.—Inlaid and tooled work of ancient and modern styles. Elegantly bound works of English literature, in calf, morocco, russia, and vellum. The *album perfectionné*, *album héraldique*, *album enluminé*, etc.

OBJETS DE LUXE EN CUIR.—Objets d'art et d'utilité, destinés à S.M.I. l'Empereur des Français, LL.AA.RR. le Prince et la Princesse de Galles, etc. Articles de bureau, objets en cuir enluminé livres d'engagements du Jockey Club; porte-monnaies, livres de poche, écrins superbes, boîtes à dépêches, portefeuilles, et nécessaires de touriste, bureaux, etc.

RELIURE.—Reliure en mosaïque et façonné, styles anciens et modernes. Œuvres anglaises, élégamment reliées, en veau, maroquin, cuir de Russie et velin. Album perfectionné, album héraldique, album enluminé, etc.

CLASS VI. — ILLUMINATING ON VELLUM.
ILLUMINATED BOOKBINDING.—Revival of Celtic
Art. Elaborately finished volumes serving to
illustrate the progress of modern illumination.

ENLUMINURE SUR VELIN.—RELIURE ENLU-
MINÉE.—Restauration de l'art celtique. Textes
magnifiquement enluminés servant à illustrer
le progrès dans l'enluminure moderne.

Volumes presented to H.R.H. the Prince of Wales on the occasion of his marriage, executed by M. W. & Co. Six volumes graciously lent for exhibition by His Royal Highness.

Volumes présentés à S.A.R. le Prince de Galles, à l'occasion de son mariage, exécutés par M. W. et Cie. Six volumes gracieusement prêtés à l'Exposition par Son Altesse Royale.

Illuminated volumes presented to the Earl of Hillsborough, from the tenantry of the Marquis of Downshire's Estates. Eight volumes lent for exhibition.

Volumes enluminés présentés à Lord Hillsborough de la part des habitants des terres de M. le Marquis de Downshire. Huit volumes prêtés à l'Exposition par Lord Hillsborough.

Illuminated volumes, presented to B. L. Guinness, Esq., M.P., recording his munificent restoration of St. Patrick's Cathedral, Dublin. Lent by Mr. Guinness.

Volumes enluminés, célébrant la restauration de la Cathédrale de S. Patrick à Dublin, par M. Guinness, M.P., Toutes les illustrations sont des dessins originaux par M. W. et Cie.

The illuminations and illustrations in these volumes are all original designs by M. WARD & Co.

SUMMARY OF THE ASSISTANCE AFFORDED BY THE STATE IN PROMOTING INSTRUCTION IN SCIENCE AND ART AMONG THE INDUSTRIAL CLASSES.

DIVISION FOR ART.

A sum of money is voted annually by Parliament for the purposes of Science and Art.

This sum is administered by the Science and Art Department of the Committee of Council on Education.

A portion of the sum voted is set apart for the promotion of instruction in Art in the United Kingdom.

The object of this grant is to promote instruction in Drawing, Painting, and Modelling, and designing for Architecture, Manufactures, and Decoration, especially among the industrial classes.

To effect this object the Department gives aid towards the teaching of Elementary Drawing in Schools for the children of the Poor; towards the teaching of Drawing in Night Classes for Artisans; towards instruction in Art in Schools of Art; and towards the Training of Art Teachers. The collection of Decorative Art at South Kensington is also made available for the purposes of instruction in Schools of Art.

1. AID TO SCHOOLS FOR THE POOR.

A School for the Poor is one established to promote the education of children belonging to the classes who support themselves by manual labour.

Annual examinations in Drawing are conducted in the month of May, by the Managers of Schools for the Poor who provide the necessary room, or rooms. The children must have been taught drawing by teachers holding certificates granted by the Department. The examination papers are supplied by the Department if application be made before the 14th of April; and when worked, under prescribed regulations, are returned to the Secretary of the Science and Art Department. Payments of 1s., 2s., or 3s., in proportion to the proficiency shown by the children, and of 10s. on account of pupil teachers, are made to the Managers of the School, who also receive an

allowance of 20s. for conducting the examination in accordance with the regulations. A prize is given to every child who exhibits the required standard of excellence.

2. AID TO NIGHT CLASSES.

A Night Class is a class for instruction in Elementary Drawing held after six p.m., to which the public is admitted on payment of fees within the reach of persons who support themselves by manual labour.

Annual examinations in Drawing are held, in the month of March, by the Local Committees or Managers of Night Classes. The papers are supplied by the Department if application be made before the 10th February; and when worked are returned to the Secretary of the Science and Art Department by the first post after the examination. If instruction in drawing has been given by teachers holding certificates granted by the Department, a payment of 10s., under prescribed regulations, is made to the Local Committee, or Managers, on every exercise satisfactorily worked in a given time, by an artisan, and of 15s. on every artisan who may submit a set of satisfactory works executed by him in the class during the previous year. The Local Committee, or Managers, also receive an allowance of 2% for conducting the examination according to the regulations. Prizes of books, colours, instruments, &c., are awarded to students, whether they be artisans or not, who excel in the examinations, or who submit satisfactory works.

Examinations are held in places where no Night Class exists, provided they are conducted by a responsible Committee approved by the Department. Prizes are given to successful candidates, but no payments are made on account of the success of students instructed by uncertificated teachers. The examinations in Night Classes must be open to all students who may present themselves to be examined.

3. AID TO SCHOOLS OF ART.

A School of Art is a room or rooms devoted wholly to instruction in Art, where examples of Art are always open for study and inspection, and where the Managers employ a teacher who has taken an Art teacher's certificate of the 3rd Grade. In Schools of Art the students pay fees of 2s. per month, and upwards; Classes meeting in the day time paying higher fees than the Night Classes.

The Science and Art Department aids the instruction given in Schools of Art to artisans, and teachers, when under the direction of a Local Committee of not less than five well known responsible persons. Provided Day Classes are held and that artisan Evening Classes meet under the instruction of the master at least three times in each week for two hours.

Annual examinations are held under the same conditions and with the same encouragement as those in Night Classes.

Payments are made to the Local Committee of 10s. on every exercise satisfactorily worked in a given time by an artisan; of 15s. or 20s. on every artisan who may submit a set of satisfactory works executed by him in the school; of 10l. or 20l. in aid of the salary of Art-pupil-teachers; of 5l. on every artisan student trained in the school who may obtain a National Scholarship; of 10l. on 3rd grade certificates obtained by artisans or teachers trained in the school; and of 10l. on the proper keeping of the necessary registers, and for forwarding an annual report on a prescribed form. Prizes are given to students who excel in the examinations, and to students who send up elementary works of great merit. The examinations are open to all persons who may desire to present themselves.

The best works in other than the elementary stages of instruction by students, whether artisans or not, in drawing, painting, modelling, or designing, are selected to enter into a National Competition between the works of all the Schools of Art in the Kingdom, and medals of gold, silver, and bronze, and prizes are awarded to the students who have executed the most meritorious of the competing works.

4. THE NATIONAL ART TRAINING SCHOOL.

The National Art Training School is established at South Kensington for the purpose of training Art-masters, and mistresses for the United Kingdom, and for the instruction of students in designing, &c., to which male and female students are admitted when properly qualified; receiving an allowance, in aid of their maintenance, of from 5s. to 25s. per week, which is proportioned to their attainments, and to their qualification for the duties of teaching required from them. When such students have obtained certificates of qualification, they are appointed by the Local Committees, teachers

to the Schools of Art throughout the United Kingdom.

National Scholarships in the Art Training School are offered for competition amongst Schools of Art. They are tenable for one or two years by successful students, who are admitted to study in the Art Museum, with special reference to the manufactures of the district from which the students are selected. A maintenance allowance of 20s. or 40s. per week is made during the time allotted to study.

Certificates of competency to teach are given to candidates who pass the necessary examinations.

These are called Certificates of the 3rd Grade.

The following are the Groups which form the subjects of Certificates:—

GROUP 1.—ELEMENTARY DRAWING AND COLOURING, with Examinations in Geometry, Perspective, Mechanical and Architectural Drawing. Stages, 1, 2, 3, 4, 5, 6, 7, 10, and 13.

GROUP 2.—PAINTING, with Examination in Styles of Art, and in the elementary principles of ornament, technicalities of painting and botany. Stages 11, 12, 14, 15, and 22.

GROUP 3.—THE FIGURE DRAWN and Painted, with Examination in the historic styles of ornament and anatomy. Stages 8, 9, 16, and 17.

GROUP 4.—MODELLING ORNAMENT, with Examination in Styles of Art, and in the elementary principles of ornament. Stages 18, 20, and 22.

GROUP 5.—MODELLING THE FIGURE, with Examination in the historic styles of ornament and anatomy. Stages, 8, 9, 19, and 21.

GROUP 6.—TECHNICAL INSTRUCTION with Examinations in Architecture and Ornament.

The Examinations take place annually at the offices of the Department, South Kensington, in the month of February.

5. CIRCULATION OF EXAMPLES AND BOOKS.

Every School of Art is privileged to borrow objects from the Museum, and examples, books, &c., from the National Art Library; both these institutions being, as far as possible, circulating institutions for the benefit of the United Kingdom.

6. GRANTS FOR PURCHASE OF EXAMPLES.

All Schools of Art, Public Schools for the education of the poor, and Mechanics' and other institutions for artisans, may obtain grants, of 50 per cent. on the cost, in aid of purchasing examples, models, casts, and other apparatus for Art instruction.

SCIENCE SCHOOLS AND CLASSES IN MAY, MDCCCLXV. AND MDCCCLXVI.

Schools in *italics* are Navigation Schools which were not examined in May.

ROYAL SCHOOL OF NAVAL ARCHITECTURE AND MARINE ENGINEERING.

I. The School is for the instruction, not only of the Admiralty pupils from the Royal Dockyards and officers of the Royal Navy, but also for the use of Naval Architects and Shipbuilders in wood and iron, Marine Engineers, Foremen of Works, Shipwrights, and other persons desirous of studying Naval Architecture.

II. The Admiralty have deposited their collection of Naval Models at the South Kensington Museum, and My Lords trust that the private shipbuilders of the country will give their assistance in rendering the collection more complete.

III. The School has a yearly session at South Kensington of six months, from November to April. It was opened on the 1st November, 1864.

IV. The fee for the full course of instruction will be 25*l.* for each session of six months, or 60*l.* for the course of three years. The public will be admitted to the full corresponding courses of lectures on payment of a fee of 2*l.*, or to each separate course by fees which will be hereafter determined. So long as there is room in the School, the public will also have the opportunity of attending any of the separate classes of instruction on the payment of proportionate fees.

The number of Dockyard students for the Session 1866-7 is 30; number of public students 14; total 44.

DIVISION FOR SCIENCE.

(Extracts from the Science Directory.)

VI. The following are the Sciences towards instruction in which aid is given:—

Subject 1, Practical Plane and Descriptive Geometry.

„ 2, Mechanical and Machine Drawing.

„ 3, Building Construction, or Naval Architecture.

„ 4, Elementary Mathematics.

„ 5, Higher Mathematics.

„ 6, Theoretical Mechanics.

„ 7, Applied Mechanics.

„ 8, Acoustics, Light, Heat.

„ 9, Magnetism, and Electricity.

„ 10, Inorganic Chemistry.

„ 11, Organic Chemistry.

„ 12, Geology.

„ 13, Mineralogy.

„ 14, Animal Physiology.

„ 15, Zoology.

„ 16, Vegetable Physiology and Economic Botany.

„ 17, Systematic Botany.

„ 18, Mining.

„ 19, Metallurgy.

„ 20, Navigation.

„ 21, Nautical Astronomy.

„ 22, Steam.

„ 23, Physical Geography.

VII. The assistance granted by the Science and Art Department is in the form of—

1. Payments on results to certificated teachers.

2. Grants towards the purchase of apparatus etc.

3. Public examinations in which Queen's Medals, Honorary Certificates, and Prizes are awarded, held at all places complying with certain conditions. On the results of these examinations the payments are made to the teachers.

VIII. Examinations for certificates to teach any of the before-mentioned sciences are held annually commencing in the first week in November, at South Kensington. Examinations will also be held in Dublin, Edinburgh, and Manchester, if five candidates register themselves for examination in Ireland and in Scotland.

X. A local Committee of not less than five well known responsible persons must be formed in connexion with every Science class who will carry out the instructions.

XI. The Department holds, through the

agency of each Local Committee, in May of each year, a public examination of all Science schools and classes in any locality throughout the United Kingdom which complies with the requisite conditions. On the results of this examination the payments are made to certificated teachers.

XII. A School or class taught by a teacher not holding a certificate, may be examined at the same time and in the same manner as the classes under certificated teachers.

XIV. Any persons whatever, whether taught by the certificated teacher or not, may present themselves at the local examination on registering their names, etc.

XV. The successful candidates at the May examination and the quarterly examinations of seamen are classified under the heads of first, second, third, fourth, and *fifth* class. The standard of attainment required may be raised from year to year. For the *fifth* class it is only such as will justify the Examiner in reporting that the instruction has been sound, and that the students have benefitted by it. Those who have attained a higher degree of proficiency are classed as 4th, 3rd, 2nd, or 1st class, according to their merit.

XVI. To the 1st, 2nd, and 3rd class are given Queen's prizes consisting of books or instruments chosen by the candidates from lists furnished for that purpose. These are unlimited in number, except that a student who has once received a 1st, 2nd, or 3rd class Queen's prize, cannot receive the same or a lower class prize in the same subject again. If such student should be again successful, his name will simply be recorded in the published list.

XVII. The Queen's medals are—one gold, one silver, and two bronze in each subject, for competition throughout the United Kingdom.

XVIII. Payments are made to the certificated teacher on account of the instruction of students of the Artisan Classes (for definition of Artisan Class, see Science Form No. 51, page 24) in the following manner:—

1*l.*, 2*l.*, 3*l.*, 4*l.*, 5*l.* are the claimable payments for each student in each subject, according to the class in which he passes, but these amounts may be reduced in the following ways:—

1st. If the student has been successful in the same subject before such payments are reduced by the normal payment which was claimable on such previous success; for instance, the 4*l.* payment for a second class,

would if the student had previously taken a fourth class, be reduced by 2*l*.

2nd. If a student be successful in more than one subject at an examination, the payments on account of such further subjects are reduced by one half.

3rd. When on this scale they would amount to more than 60*l*. the excess up to 40*l*. is diminished by one quarter, the excess above 40*l*. by one half. Thus payments which on the above scale would be 100*l*. and 150*l*. will be reduced to 90*l*. and 115*l*. respectively:—provided that the student has received 25 lessons at least from the teacher in each subject in which he claims payment since the last examination, each lesson being an attendance at a meeting of the school of at least three-quarters of an hour's duration on a separate evening. The 25 lessons need not necessarily be all given in one year, but may extend over a longer period.

XXI. A grant towards the purchase of

apparatus, diagrams, &c., of 50 per cent. on the cost of them, is made to science schools and classes in Mechanics' and similar institutions where the teacher is certificated, and to the extent of 5*l*. to other poor schools and classes. A requisition must in these cases be made on Form No. 49.

At South Kensington, the 12th day of February, 1867.

BY THE RIGHT HONOURABLE THE LORDS OF HER MAJESTY'S MOST HONOURABLE PRIVY COUNCIL ON EDUCATION.

Present,—His Grace the Duke of Buckingham and Chandos, Lord President.

The Right Honourable H. Lowry Corry, M.P., Vice President.

My Lords consider the subject of examinations for certificates as teachers of science.

They determine that for the future all candidates who obtain a first or a second class in the May examinations shall be deemed qualified to earn payments on results according to the rules of the Science Directory, and that the special examinations in November for teachers' certificates be dispensed with.

SOUTH KENSINGTON MUSEUM.

This Museum commenced with the erection in 1856 of an iron structure of the simplest kind. It was built under the superintendence of Sir W. Cubitt, and when completed was given by the Commissioners of the Exhibition of 1851, into the possession of the Science and Art Department. Since that date a permanent brick and iron structure, with terra cotta decorations, has been built. The building was planned, and its construction superintended up to the year 1865, by the late Captain Fowke, R.E., architect of the building for the International Exhibition of 1862. Its decorations, external and internal, were designed by the late Mr. Godfrey Sykes, originally a student of the Sheffield School of Art. Specimens of terra-cotta decoration designed by this artist may be seen in the Champs de Mars.

The contents of the South Kensington Museum may be classified as follows:—

1. The Art Collections, which now number 12,530 objects, illustrative of the history, principles, and processes of decorative art in sculpture, carvings in wood and ivory, decorative furniture, metal work, goldsmiths' work, jewellery and lapidaries' work, engraved gems, niello work, arms, armour, pottery, glass, enamels, ancient lac work, textile fabrics, miniatures, &c., &c. An important feature in these collections is the reproduction by means of casting, and electrotypy, of rare and costly works of art in other countries, with which the Department of Science and Art is desirous of effecting exchanges of such reproductions. Another feature

is the permanent Loan Exhibition of valuable objects of art belonging to private owners; such are many of the works now being exhibited at Paris, in the History of Labour Collection. The museum also contains a large and valuable number of modern English paintings mainly presented by the late J. Sheepshanks, Esq., and water-colour drawings, principally bequeathed by the late R. Ellison, Esq., as well as the Cartoons of Raphael lent by Her Majesty; and it affords temporary accommodation for the exhibition of many paintings of the British School which belong to the National Gallery.

2. The Art Library containing about 15,000 volumes relating to art, and a great number of original drawings, illuminations, and engravings.

3. The Educational Museum and Library, containing many educational works in various European languages, and scientific apparatus and diagrams, chiefly lent by the inventors and publishers.

4. The Museum of Construction and Building Materials, containing examples of materials and apparatus of use in building, draining, and decorating houses; and many architectural models.

5. The Museum of Animal Products and Food Collection, principally formed by the transference by English and foreign commissions of collections exhibited in the International Exhibitions of London in 1851 and 1862, and of Paris in 1855.

6. The Naval Models, belonging to the Admiralty, supplemented by loans from private

builders and owners. The Admiralty Collection shows the various changes in the construction of men-of-war from 1416 down to the present time.

Descriptive labels are attached to all objects in the Museum, to avoid compelling visitors to purchase catalogues, which however, may be obtained in the building.

The following are the terms on which the Museum is open to the public, and the tables show the number of visitors since the opening of the Museum in 1857.

The Museum is open daily, Sundays excepted, free on Mondays, Tuesdays, and Satur-

days, from 10 a.m. till 10 p.m. The Students' days are Wednesdays, Thursdays, and Fridays, when the public are admitted on payment of 6d. each person, from 10 A.M. till 4 P.M.

Tickets of admission to the Museum, including the Art-library and Educational Reading-room, are issued at the following rates:—weekly, 6d.; monthly, 1s. 6d.; quarterly, 3s.; half-yearly, 6s.; yearly, 10s. Yearly tickets are also issued to any school at 1l. which will admit all the pupils of such schools on all students' days; to be obtained at the catalogue sale-stall of the Museum.

SCIENCE AND ART DEPARTMENT OF THE COMMITTEE OF COUNCIL ON
EDUCATION, SOUTH KENSINGTON MUSEUM.

REPRODUCTIONS IN ELECTRO-COPPER, CASTS IN FICTILE IVORY AND IN PLASTER, COLOURED
PHOTOGRAPHS, CHROMOLITHOGRAPHS, DRAWINGS, &c.

*Reproductions en Cuivre Galvanisé, Ivoire Céramique, et en Plâtre, Photographies Coloriées, Chromo-
lithographies, Dessins, etc.*

The greater proportion of these reproductions and copies has been made under the direction of the Science and Art Department, the object being to promote the formation of local museums in connection with schools of art in Great Britain and Ireland, and also to supplement the collection of original objects in the South Kensington Museum, and thus to render this collection more complete as an illustration of the History of the Art of all Nations.

They are taken from original objects in various continental museums, public buildings, cathedrals, and private collections. The Science and Art Department has to acknowledge the great liberality with which permission to make these copies has been accorded. The collection commenced at the Paris Exhibition of 1855, when casts were taken of objects in the Musée d'Artillerie and the Hôtel de Cluny, Paris, by permission of his Imperial Majesty the Emperor of the French. The reproductions in fictile ivory of ancient ivory carvings are selected from the series of casts issued by the Arundel Society.

Examples of these reproductions, together with selections of suitable original objects in metal, pottery, glass, enamels, furniture, textile fabrics, &c., from the collections in the South Kensington Museum, have been sent on loan to exhibitions in connection with and in aid of the various schools of art in the United Kingdom since the commencement of the year 1855. The annexed table, which has been compiled from returns, as far as they have been supplied, by the local managers of these exhibitions, will illustrate the result.

La plupart de ces reproductions et copies ont été exécutées sous la direction du Département de Science et d'Art, dans le but d'encourager la formation de musées locaux en rapport avec les Écoles d'Art de la Grande Bretagne et de l'Irlande, et aussi de suppléer les objets originaux manquant à la Collection du Musée de Kensington, et la rendre ainsi plus complète comme illustration de l'Histoire de l'Art chez tous les peuples.

Toutes sont exécutées d'après des objets originaux se trouvant dans divers musées du continent, édifices publics, cathédrales et collections particulières. Le Département de Science et d'Art se plaît à reconnaître la grande libéralité avec laquelle permission a été accordée de faire ces copies. La collection a été commencée à l'Exposition de Paris de 1855, époque à laquelle furent pris, avec la permission de Sa Majesté Impériale l'Empereur des Français, des moules d'objets se trouvant au Musée d'Artillerie et à l'Hôtel de Cluny, à Paris. Les reproductions en ivoire céramique d'anciens ivoires sculptés ont été choisies dans une série de moules publiés par la Société Arundel.

Des exemplaires de ces reproductions, ainsi qu'un choix convenable d'objets originaux en métal, poteries, verre, émaux, meubles, tissus, etc., tirés des Collections du Musée de Kensington, ont été prêtés à diverses expositions qui ont eu lieu en connection avec les différentes Écoles d'Art du Royaume-Uni, et pour leur venir en aide, depuis le commencement de l'année 1855. Le tableau qui suit, compilé d'après les chiffres extraits des rapports qui ont été jusqu'à présent par les directeurs de ces expositions, en montrera les résultats.

RETURN of the Visitors' Receipts, &c., at various Exhibitions to which objects of Art were contributed from the Art Museum, from 1855 to 1866, both years inclusive.

Montants des Recettes provenant des Visiteurs, etc., des diverses Expositions auxquelles furent prêtés des objets d'Art par le Musée d'Art, de 1855 à 1866, ces deux années inclusivement.

REPRODUCTIONS IN ELECTRO-COPPER.

. With one exception (the German cup, No. 65-64), all these objects have been reproduced for the South Kensington Museum either by Messrs. Elkington & Co., or by Messrs. Franchi and Son; by whom examples of many of the electrotypes are supplied to the public at fixed prices. A fuller descriptive list may be obtained at the South Kensington Museum, with the electrotypist's name and the prices of those objects of which examples are permitted to be sold to the public.

. *Tous ces objets, à l'exception d'un seul (la coupe allemande, No. 65-64), ont été reproduits soit par MM. Elkington et Cie., soit par MM. Franchi et Fils, qui peuvent fournir au public, à des prix fixes, des exemplaires de beaucoup des électrotypes dont suit le Catalogue. On peut s'en procurer au Musée de Kensington une liste qui en contient une description plus détaillée, ainsi que le nom de l'électrotypiste et le prix des objets dont il est permis de vendre des exemplaires au public.*

ON THE SCREEN OF TROPHY.

and 65 (Nos. 16, 8, 6, 7, 5, 13, & 10)

CLASS IX.

MRS. CAMERON'S PHOTOGRAPHS.

MRS. CAMERON'S PHOTOGRAPHS

Are all taken from the life, not enlarged. They are all untouched prints from untouched negatives, as MRS. CAMERON works as an amateur at Freshwater, in the Isle of Wight, and takes as well as prints her own photographs without any assistance whatever. MRS. CAMERON uses chiefly a lens made by Jamin.

MRS. CAMERON'S photographs may be purchased of MESSRS. COLNAGHI, 14 Pall Mall East, London, S.W.

PHOTOGRAPHIES DE MME. CAMERON,

Toutes exécutées directement d'après nature, toutes des reproductions non-retouchées d'épreuves négatives également non-retouchées. MME. CAMERON travaille en amateur à Freshwater, dans l'Île de Wight, et prend, et reproduit, ses propres photographies sans l'aide de personne. MME. CAMERON se sert principalement de la lentille fabriquée par Jamin.

On peut acheter les photographies de MADAME CAMERON chez MESSIEURS COLNAGHI, 14 Pall Mall East, London, S.W.

MRS. CAMERON'S PHOTOGRAPHIEN

sind alle direct vom Leben genommen, nicht vergrößert. Sie sind alle unberührte Abdrücke von unberührten Negativen, da MRS. CAMERON als eine Liebhaberin der Photographie zu Freshwater, auf der Insel Wight, arbeitet und ihre eigenen Photographien sowohl abnimmt wie auch druckt, ohne irgend welche Hülfe. MRS. CAMERON benutzt hauptsächlich eine von Jamin gefertigte Linse.

MRS. CAMERON'S Photographien sind zu haben bei den HERREN COLNAGHI, 14 Pall Mall East, London, S.W.

FOTOGRAFIE DELLA SIGNORA CAMERON

sono tutte prese direttamente dal vero. Sono tutte impressioni intatte da negative intatte, poiche la SIGNORA CAMERON lavora come dilettante a Freshwater, nell' Isola di Wight, e ritrae come pure imprime le proprie fotografie senza veruna qualsiasi assistenza. La SIGNORA CAMERON usa principalmente una lente fatta da Jamin.

Le fotografie della SIGNORA CAMERON si vendono dai SIGNORI COLNAGHI, 14 Pall Mall East, London, S.W.

Prezzo, montate come nella cornice, UNO SCILLINO CIASCUNA PARI A LIT. 1.25c.

ROSS, THOMAS, 53 *Wigmore-street, Cavendish-square, w. (late of 2 and 3 Featherstone-buildings, Holborn), London.*

Manufacturer of first-class Microscopes, Telescopes, Photographic Lenses and Apparatus, &c.
Fabricant de Microscopes, Télescopes, Lentilles et Appareils Photographiques, etc., de première classe.
 Fabricant von Microscopen, Telescopen, photographischen Linsen und Apparaten u. s. w.
 erster Qualität.

Fabbricante di Microscopi, Cannocchiali, Lenti e Appareti Fotografici di Primo Ordine, ecc.

Obtained Prize Medals at the Great Exhibitions of 1851 and 1862.

Ross's microscopes have always held the highest place in the estimation of scientific men. The achromatic objectives possess great penetration and brilliant definition. The higher powers work through great thickness of covering glass.

Ross's telescopes, it will suffice to remark, are used almost exclusively by officers in the British navy, and also by deerstalkers, tourists, &c. These instruments are honoured by royal patronage.

Ross's photographic lenses are too well known to need comment. The greatest novelty in this branch of manufacture is Ross's actinic Doublet lens for landscapes, architectural subjects, and copying; these lenses include a very wide angle of subject on plates of all dimensions, and reproduce straight lines without the slightest curvature. An important feature in the performance of these instruments is perfect freedom from that defect inherent to many photographic lenses—the production of haziness in the centre of the picture.

Catalogues are sent on application.

A obtenu des Médailles aux Grandes Expositions de 1851 et 1862.

Les microscopes de Ross ont toujours occupé la première place dans l'estime des hommes de science. Leurs objectifs achromatiques possèdent au plus haut degré les pouvoirs de pénétration et de définition. Ceux même d'un grossissement supérieur fonctionnent à travers des lamelles d'une épaisseur considérable.

On se bornera à faire remarquer que ce sont les télescopes de Ross dont se servent presque exclusivement les officiers de la Marine Anglaise, ainsi que les chasseurs, les touristes, etc. Ces instruments ont été aussi honorés de la faveur royale.

Les objectifs photographiques de Ross sont avantageusement connus, et n'ont nul besoin de commentaire. La plus grande nouveauté dans cette branche de manufacture consiste dans le Doublet actinique pour paysages, sujets d'architecture et copies. Ces lentilles comprennent un angle fort considérable sur plaques de toutes dimensions, et reproduisent les lignes droites sans la plus légère courbure. Un trait important dans la manière de fonctionner de ces instruments est leur parfaite exemption de miroitement, défaut inhérent à beaucoup de lentilles photographiques.

Catalogues envoyés sur demande.

Erhielten Preismedaillen auf den grossen Industrie-Ausstellungen von 1851 und 1862.

Ross's Microscope haben stets den höchsten Standpunkt in der Achtung wissenschaftlicher Männereingenommen. Die achromatischen Objectivgläser besitzen grosse Durchdringungskraft und brillante Klarheit. Die stärksten Objectivlinsen können benutzt werden, auch wenn Gegenstände unter dicke Deckgläser gelegt sind.

Ross's Telescope, es genügt zu bemerken, werden fast ausschliesslich von den Officieren der Britischen Flotte, ebenso von Jägern, Touristen u. s. w. gebraucht.

Ross's photographische Linsen sind so wohl bekannt, dass sie keiner Empfehlung bedürfen. Die grösste Neuigkeit in diesem Zweige der Photographie ist Ross's actinische Doubletlinse für Landschaften, architectonische Gegenstände und zum Copiren. Diese Linsen, welche dem Bilde grossen Glanz geben, umfassen einen sehr grossen Winkel für den Gegenstand auf Platten von allen Grössen und stellen gerade Linien ohne die geringste Abweichung her. Ein wichtiger Zug in der Leistung dieser Instrumente ist, dass sie vollkommen frei von dem vielen photographischen Linsen eigenen Fehler sind, einen unklaren Fleck in der Mitte des Bildes zu bewirken.

Cataloge werden aufgefällige Anfrage gesandt.

Ottenne Medaglie alle Grandi Esposizioni del 1851 e 1862.

I microscopi di Ross hanno sempre occupato il posto il più eminente nella stima degli scienziati. Le obbiettive acromatiche posseggono una grande penetrazione ed una definizione brillante. Quelle d' un potere superiore operano a traverso una grande densità di vetro.

Basterà d' osservare che i cannocchiali di Ross sono usati quasi esclusivamente dagli ufficiali della Marina Inglese, dai cacciatori, dai viaggiatori, ecc. Questi strumenti sono stati onorati del Patronato Real.

Le lenti fotografiche di Ross sono bene celebrate: non richiedono encomio. La più grande novità di questo ramo di manifattura consiste nella sua lente attinica 'Doublet' per paesaggi, soggetti d' architettura, e per copiare. Queste lenti inchiudono un angolo larghissimo di subietto sopra quadri d' ogni dimensioni, e riproducono linee rette senza la minima curvatura. Un carattere importante nell' azione di questi strumenti è la perfetta assenza del difetto inerente a molte lenti fotografiche—la produzione di nuvolosità nel centro del quadro.

Si mandano i cataloghi a richiesta.

CLASS X.

F. BESSON & CO., *Manufacturers of Brass and Wood Musical Instruments by a Patent Mathematical and 'Prototype' System,* rewarded with Twenty-four Medals of Honour.*

New Star Jupiter.

English Model.

Makers to the Armies, Navies, and Academies of Music of Great Britain, France, Belgium, Spain, &c., &c.

LONDON MANUFACTORY—198 Euston-road.

Branches at Paris, Madrid, Barcelona, Brussels, Charleroi, and the Indies.

Instruments of every description, from those of the simplest and cheapest kind up to the most elaborate.

SPECIAL BRANCH FOR INSTRUMENTS FOR WORKING MEN'S BANDS.

New Star Jupiter.

French Model.

Instruments with transposition register, (patented the 8th September, 1858) (BESSON & GIRARDIN), enabling the most difficult music to be executed (even that of the violin), without any curtailment, without change of tone or special arrangement of the slides, and without there being any necessity for withdrawing the lips from the instrument, whatever number of sharps and flats may occur to the key. These instruments will allow composers the greatest freedom of composition, without their being continually stopped, by the difficulties caused by the defects of ordinary instruments.

Trombones with 3 to 6 valves of every shape and key, from *F* tenor to *B* \flat contra-bass, and retaining the genuine tone of the slide trombone.

Slide trombones with 2 valves.

Instruments with 3 independent valves and a register forming 8 independent positions. (Patented 16th November, 1857.)

Transposition Register applied to instruments with dependent valves. (Patented 1856.)

Instruments of every description, with one ascending piston of a tone or half tone.

Instruments of the usual shape, clear, full, and circular bore, and short, light, and quick action (patented 18th January, 1855), with 3, 4, or 5 valves, from the small high soprano to the double *B* \flat contra-bass, invented by BESSON in 1846, exhibited in 1849, and adopted by the military bands by ministerial decree in 1854.

Instruments with moveable bells (patented the 16th November, 1857), by which the last battalion of a regiment on the march is enabled to hear the music, through the facility of directing the sounds at will, upon a given point, in the open air or in an enclosed space.

New trumpets from the high *D* \flat to *G*, in substitution of the ordinary concert trumpet (*trompette d'harmonie*), the difficulty of ma-

naging which, has led to its abandonment. There is no occasion for any special composition for this new trumpet; the same music may be used as for the cornet, and a cornet player can in a few days play this instrument.

French horns (hand or with moveable valves at will), possessing with the pistons, the same kind of sound and vibration as the simple horn.

Echo instruments, retaining with the echo, all the original justesse of the instrument.

Neoforn instruments, circular, with moveable bells.

Circular contra-basses passing over the shoulder, invented by BESSON in 1855.

Duty bugles according to new regulations.

Clarionets, new systems, bassoons, oboes, flutes, &c. &c.

Experimental acoustic instruments in paper, cloth, gutta percha, plaster, board, etc., etc., possessing the same qualities of tone and justesse as those in brass.

N.B. The fact is well known that no manufacturer hitherto has been able to succeed in producing a cornet in *C*, good as far as *A* \sharp ; a good bugle in *C* and *B* \flat ; a tenor horn (to be introduced in the cavalry in place of the French horns) truly good in *F* \sharp to *C*; a Baritone, an Euphonium, a trombone good in *C* and in *B* \flat ; a good contra-bass in *F* and in *E* \flat ; or a good double contra-bass in *C* and *B* \flat .

But by BESSON's system, viz. the PATENTED PROTOTYPES, manufactured upon mathematical principles, the excellence of these instruments is guaranteed in all their keys, and any number of instruments, equally perfect, can be produced with mathematic certainty.

* By this system, F. Besson & Co. will fix in the walls of any fort, at a very moderate price, any number of duty bugles, warranted true and indestructible, without endangering the life of the man while playing in time of war.

BROADWOOD, JOHN, & SONS, 33 Great Pulteney-street, London, w.

Five Grand Pianofortes with Iron Frame, Patent Screw Pin Piece, and all recent improvements.
Cinq Pianos à Queue, à Charpente en Fer, Plaque brevetée à Chevilles à vis, et munis de tous les Perfectionnements les plus récents.

Fünf Flügel mit eisernem Rahmen, patentirter Schraubenstimmnägelpatte und allen neuesten Verbesserungen.

No. 19,957.

FULL SIZE in case of Coromandel wood.

Construction—Iron frame; one straight iron brace, flanged; one oblique iron brace, flanged; brass suspension bar; patent screw pin piece.

CLASS XII.

ALLEN, GEORGE I., *Watcombe House, Watcombe, near Torquay, England.*

Terra Cotta and its Products—*Terre Cuite et ses Produits.*

Terra-Cotta (gebrannter Thon) und seine Producte—*Terra Cotta e sue Applicazioni.*

Terra cotta porous set, specimens showing variations of colour by firing, busts, bas-reliefs, medallions, architectural ornaments, &c.; miniature examples, tiles, bricks, drainage-pipe, &c., and glazed coloured terra cotta (opaque china); ditto (Rockingham); ditto solution for colouring house exteriors and interiors by its application; ditto statuettes, &c., resembling terra cotta by being covered with this durable solution. The blue dye extract and test papers, tobacco pipes (terra cotta, fire gauge), crucibles.

Class 12. Terra cotta, fire gauge crucibles for metals and fluxes and fire clay articles.

Assortiment d'articles en terre cuite poreuse, spécimens montrant les variations de couleur résultant de l'action du feu, bustes, bas-reliefs, médaillons, ornements d'architecture, etc.; modèles en diminutif de tuiles, briques, tuyaux de drainage, etc., et terre cuite de couleur, vernissée (porcelaine opaque); ditto Rockingham; ditto solution pour colorier les maisons à l'intérieur et à l'extérieur par son application; ditto statuettes, etc., ayant toute l'apparence de terre cuite au moyen d'une couverte de cette solution durable. Extrait de teinture bleue et papiers réactifs, pipes à tabac, terra cotta, creusets réfractaires.

Classe 12. Terra cotta, creusets réfractaires pour métaux et fondants, et articles en argile réfractaire.

Poröser Terra-Cotta-Satz; Proben, welche die Farbenveränderung durch Brennen zeigen, Büsten, Basreliefs, Medaillons, architektonische Ornamente u. s. w.; Miniatur-Exemplare, Ziegel, Backsteine, Ableitungsröhren u. s. w. und glasierte bunte Terra-Cotta (undurchsichtiges Porcellan); ditto Rockingham-Waare, ditto Auflösung zum Anstreichen der Aussen-seite und des Innern von Häusern durch seine Anwendung; ditto Statuetten u. s. w., welche, durch die Anwendung dieser dauerhaften Auflösung, wie echte Terra-Cotta erscheinen. Der blaue Farbenextract und Probierpapier, Tabackspfeifen, feuerfeste Schmelztiegel von Terra-Cotta.

Klasse 12. Feuerfeste Schmelztiegel von Terra-Cotta für Metalle und Schmelzungen und Artikel von Feuerthon.

Fornimento in terra cotta porosa, campioni che mostrano le variazioni di colore nella cottura, busti, basso-rilievi, medaglioni, ornati architettonici, ecc., esemplari in miniatura, tegole, mattoni, condotti da scoli, ecc., e terra cotta verniciata in colori (porcellana opaca); detta Rockingham, detta soluzione per colorare le facciate e gli interni delle case colla sua applicazione; detta statuetta, ecc., somiglianti alla terra cotta essendo ricoperti di questa durevole soluzione. Estratto di tinta azzurra e carte di prova chimica, pipe, terra-cotta, crogiuoli a staza da fuoco.

Classe 12. Terra cotta, crogiuoli a staza da fuoco per metalli e composti chimici metallici e oggetti in argilla da fuoco.

THE MODEL OF THE GREEK EGYPTIAN DIAL WITH STEPS,

In the British Museum, explained with reference to the Noah's ark symbolism, for the lunar idolatry of the ancient Egyptian Baalists.

The typical structure of this dial is of great importance for the evidence it affords respecting the reference to the 'flood of Egypt,' in the language of the latter-day Jewish prophecies. For it is not simply a metaphor drawn from the annually recurring flood of the Nile, which the Egyptians observe gladly, from its fertilising effects upon the ground. But the words of Hosea, ix. 3, and Amos, viii. 8, 9, refer us to a *flood of judgment for the Baalistic idolatry of the Egyptians*, which they had built up on those traditional records of Noah and his time, which were handed down of old for a typical instruction unto righteousness from the works of God. The two principal features of this typical instruction unto righteousness were—

1st. From the geological evidences that the earth which we inhabit had at one time been submerged under water.

2nd. From God's ordinances of day and night—for a typical comparison of light and darkness—under a natural and spiritual contrast of varying intensity; by a metaphor drawn from a subordination of power in the greater and lesser lights of heaven; though all were ordained in common to proclaim to man the glorious majesty of God on high.—Psalm, xix; Gen. i. 24.

Hence the reference of Jewish prophecy to the returning '*flood of Egypt*,' predicted Israel's return in the latter days to that lunar worship of the old Egyptian idolatry, for which Jeroboam had forsaken the Levitical law of God's typical ordinances appointed by Moses, and adopted those of the Egyptians relating to their cycle of Horus and the 15 generations of the Cynic circle, for the half month of 15 days as measured by the equinoctial hour of 15 degrees to 60 minutes. The Egyptians seem to have numbered this to the diurnal arc of 10 hours, limited over a polar equinoctial dial, upon the steps of their typical and idolatrous dialling with steps.

Thus the Noah's ark symbolism on our celestial globe was made an idolatrous measure of typical and prophetic time given to the sun's north declination; westward by RHAPSINTUS—as to ascending light reckoned westward going north by the dragon's head—for half the old lunar year of 10 months. For the remaining half they symbolised it as returning eastward, going south by the dragon's tail, for descending light. This they represented by the '*to and fro*' progress of the

shadow from the east and west horns of their hollow semicircular dial, which was of Babylonian origin.

Thus the returning '*flood of Egypt*' has mystic reference to the waters of the great river Euphrates (Rev. xvi. 12.) which began to be dried up at the outpouring of the sixth vial of God's wrath, after the *seventh* trumpet had begun to sound in the Apostolic age. But the drying up of those waters was not until '*three unclean spirits*' had gone forth as a flood out of the mouth of the dragon (Rev. xii. 15.; xvi. 12—14.), and out of the mouth of the beast, and out of the mouth of the false prophet; to gather together the armies of the nations for an exterminating warfare, under a common delusion of the world respecting the universal dominion to be given to the people of Messiah by the events which should follow the sounding of the *seventh* trumpet, as that of final judgment on the city and sanctuary of the (*spiritual*) Egypt in which our Lord was crucified (Rev. xi. 8.), with retrospective reference to Deut. xxviii. 68.

The tropical or '*to and fro*' symbolism of this idolatrous measure for typical and prophetic time (by the sun's two half yearly circuits from tropic to tropic compared with the old lunar year of 10 months, divided into two half cycles of 5 months each) was also made to divide their typical week of 7 days and years into two cycles of $3\frac{1}{2}$ days, or 2 cycles of 1,260 days.

Thus the seven side-steps of the Greek Egyptian dial were given to 7 typical days of 12 hours (for the day without night of Oriental idolatry) measuring only $3\frac{1}{2}$ days of 24 hours, in the order given below from the Hindu zodiac, for the week of 9 days, as $9 \times 40^\circ = 360^\circ$.
1 and 2. The sun and moon, on the meridian of the dial, for the image of the Ephesian Diana coming down from Jupiter.

3. Tuesday to Mars, for the retrograding shadow.

4. Wednesday to Mercury the Caduceus—bearer of Jupiter.

5. Thursday to Jupiter.

6. Friday to Venus.

7. To Saturn, for Saturday, beginning the week with the golden age of Saturn's reign; when *Evening* preceded *Morning*, in the astronomical day of the ancient Orientals.

8 and 9. were given to the Nodes.

CLASS XIII.

TOPOGRAPHICAL DEPARTMENT OF GREAT BRITAIN.

The Topographical Department of Great Britain is a branch of the War Office, and is divided into two distinct sections, to one of which—the Ordnance Survey Department—is committed the task of executing the survey of the United Kingdom, and to the other, called the Topographical and Statistical Depôt, is entrusted the collection and preservation of maps and every kind of statistical information bearing on the military condition and resources of the British empire, and of all other countries of the world.

The Ordnance Survey is carried on by a certain number of officers and men of the Royal Engineers, together with a large number of civil assistants and civil labourers, whilst the duties in the Topographical Depôt are performed by officers selected from all branches of the service, aided by a few civil and military employés.

The department is under the superintendence of a director, who is a colonel of the Royal Engineers.

Ordnance Survey.

The survey of the United Kingdom was commenced under the direction of the Master-General and Board of Ordnance at the end of the last century, and had for its object the production of a military map of the country, the scale of which was fixed at one inch to a mile = $\frac{1}{63360}$.

Considerable progress has been made in the survey, when, in 1824, it was resolved to make a map of Ireland, to remedy the inequalities which existed in apportioning the taxation of land in that country; and the scale of the English survey being evidently inadequate for the exhibition of the details required for the valuation of the land, a scale of six inches to the mile or $\frac{1}{10560}$ was fixed upon for the purpose; and the execution of the survey was entrusted to Major Colby, R.E., the same officer who was carrying on the Ordnance Survey in Great Britain.

The plans of the whole of Ireland were accordingly drawn, engraved, and published on the scale of six inches to the mile; and the value of the map was found to be so great, that upon its completion in 1840, it was determined to transfer the whole surveying force to England, and to employ it in surveying, on the six inch scale, the northern counties of England, which had not as yet been surveyed on any scale. Yorkshire and Lancashire were thus surveyed; but a considerable difference of

opinion arose about this time on the question of the proper scale for the Ordnance Survey; and it was not until after much hesitation and discussion, and the appointment of a royal commission to report on this subject, that the government finally gave orders for the execution of the following series of plans and maps, viz. :—

1. Plans of all towns having above 4,000 inhabitants on the scale of $\frac{1}{500}$ or 10·56 feet to a mile.

2. Plans of parishes, excepting uncultivated districts, on the scale of $\frac{1}{2500}$ or 25·344 inches to a mile, very nearly equivalent to one square inch to one acre, to be accompanied by tables of the contents of the fields and other parcels of ground.

3. Maps of counties on the scale of six inches to one mile = $\frac{1}{10560}$, with a certain number of contours upon them, on the scale of six inches to one mile (being reduced from the larger scales by photography, except the uncultivated districts of which the plans are drawn on the six inch scale).

4. General map of the kingdom on the scale of one inch to a mile = $\frac{1}{63360}$, showing the hill features.

The survey is now proceeding in accordance with these instructions; and the plans on the above scales are being published as fast as they are drawn, the $\frac{1}{2500}$ plans being zincographed, and the maps on the other scales engraved.

Besides carrying on the survey of the United Kingdom, the Ordnance Survey department has been called upon from time to time to furnish parties of trained surveyors, photographers, and printers, for employment on surveys in India, and some of the other colonies of Great Britain; and it has lately executed a contoured survey of Jerusalem and its environs, with a view to the improvement of the sanitary arrangements of that city.

In the year 1859 the art of photozincography was invented at the Ordnance Survey Office, Southampton; and it has since been extensively employed, not only in producing facsimiles of maps, but also in copying Domesday Book, and other ancient MSS. of general interest, for which purpose this process is admirably suited. The photographs taken in the course of the survey of Jerusalem have been copied by the process, and a set of the photozincographic views thus obtained are exhibited, in order to show its capabilities for obtaining prints of views from nature, in permanent ink,

Topographical Dépôt.

The topographical and statistical dépôt was first instituted in the year 1854, when, on the breaking out of the Crimean War, the necessity was felt for a plan department in immediate connection with the War Office. Since the peace the dépôt has been occupied with collecting the best maps and plans of all parts of the world; the compilation and printing of descriptive accounts of the organisation and equipment of the several army departments; the execution of a complete set of plans of the forts and barracks in the United Kingdom and its dependencies for the Royal Engineer Department, &c.

Subjoined is a list of the different specimens exhibited, and which contain maps on all the scales above referred to.

Printed maps.

1. Four sheets of the zincographed map of Hexham parish, Northumberland (with photographs and engravings of the same on the six inch scale), scale 25·344 inches to a mile = $\frac{1}{2500}$ with area book.

This map is sent as a specimen of the survey of Great Britain on the $\frac{1}{2500}$ scale, now in progress. Each sheet of this survey contains $\frac{1}{16}$ th of the area contained in a sheet of the county maps published on the scale of six inches to the mile; and its position is defined by dividing the margins of the six inch sheet in which it is included into 16 equal rectangles, each containing $1\frac{1}{2}$ miles by 1 mile, or 960 acres. The maps on the $\frac{1}{2500}$ scale are published by parishes; and zincographed copies are on sale at 2s. 6d. per sheet.

The accompanying photographs are on the scale of six inches to a mile, and have been used as copies by the engraver in engraving the maps on that scale, which are published by counties, in sheets 3 ft. by 2 ft., corresponding to 6 miles by 4 miles of actual measurement.

2. Four sheets of the engraved map of the county of Edinburgh, scale six inches to a mile = $\frac{1}{10560}$.

3. Four sheets of the engraved map of the city of Edinburgh, scale five feet to a mile = $\frac{1}{1056}$.

The scale of five feet to a mile has been extensively employed on the ordnance survey for plans of the large towns, but the later plans of towns have been drawn on the $\frac{1}{500}$ scale, or 10·56 feet to a mile, as the increased scale has been found necessary for designing sanitary improvements.

4. Six sheets of the engraved map of Scotland (with hills), scale one inch to a mile = $\frac{1}{63360}$.

5. Do., do. with contours, and without hills, on same scale.

Two editions have been issued of those sheets of the one inch map which have been engraved during the last few years, viz., one

in outline with contour lines, and the other with hill features, the former being found very useful for engineering and other purposes, and the latter being adapted for more general use. The duplicate plates are obtained by electrotyping each copperplate as soon as it is engraved in outline, and by engraving the contour lines on the electrotype copy and the hill features on the original plate.

6. Portfolio of engraved plans and maps of the ordnance survey of Jerusalem.

7. Four engraved maps of two-thirds of the sphere (terrestrial and celestial) on Sir H. James's projection.

MS. Maps.

1. MS. sketches of ground in Westmoreland, scale six inches to one mile, with MS. hill drawing and engraved map, containing the same ground on the scale of one inch to a mile = $\frac{1}{63360}$.

These examples show the mode in which the hill drawings are made, from which the hill features are engraved on the one inch maps. The hills are sketched on proof engravings of the six inch county maps, the sketching on the ground being much facilitated and rendered more accurate by the contour lines which are engraved on the maps. In the meantime the one inch map is engraved in outline, and an impression from the copperplate being taken on cardboard, the hills are drawn upon it by means of the sketches. The hills in the one inch map of the north of England and south of Scotland have been drawn in this manner; but in the highlands of Scotland, where the survey is in progress at the present time, the hills are being sketched on photozincographs of the plans, reduced to the scale of two inches to the mile; and the hills are thus more rapidly sketched than on the larger scale, and are more easily copied by the hill draftsman on the one-inch scale.

2. Hill-shaded map of Jerusalem. Scale $\frac{1}{2500}$.

Photographs, Photozincographs, &c.

Various specimens illustrative of the processes of photozincography and photopaperyography. Engravings of two panels in the Vatican, photozincographic facsimiles of.

Views in and about Jerusalem, photographic and photozincographic, bound in two volumes.

Domesday book, photozincographic facsimile of, in two volumes.

Domesday book, photozincographic facsimile of, in parts, by counties.

National MSS. England, photozincographic facsimile of, Parts, I. II. III.

National MSS. Scotland, photozincographic facsimile of, Part I.

Shakespeare's Plays, photozincographic facsimile of (8 plays of the first collected edition, in folio, A.D. 1623).

„ „ Scotland, 2 vols. 4to. 1861.

Electrotype Plates.

Original copperplate.

Electrotype matrix of the same.

„ duplicate „ „

Each sheet of the one-inch maps of Great Britain and Ireland is electrotyped as soon as it is engraved; and the electrotype matrices being preserved, duplicate plates are made from them from time to time, when the plates become worn by printing, or when extensive revisions have to be made, by which means the

copperplates are preserved in as good a state as when they were first engraved. The copperplates of the one-inch map of England and Wales, which were engraved before the invention of electrotype, are many of them completely worn out, and the plates have to be retouched almost to the extent of re-engraving.

Stamps for trees, &c.

These stamps are employed for stamping the trees and figures on the MS. plans, and also on the tracings of the plans on the $\frac{1}{2500}$ scale made for transfer to zinc, and save an immense amount of handwork. They were designed and made at the Ordnance Survey Office.

Punches for Engraving.

All the woods and figures of altitude are engraved on the six-inch and larger scale maps with these punches, which are designed and manufactured by the Ordnance Survey Department.

ROYAL COMMISSIONERS, VICTORIA.

GOLD COLUMN, SHOWING GOLD OBTAINED IN VICTORIA FROM OCTOBER 1851 TO OCTOBER 1861 :—

CLASS XIV.

RADIATING FRAMES FOR EXHIBITING DRAWINGS, PRINTS, &c.

INVENTED BY HENRY COLE, C.B., DIRECTOR OF THE SOUTH KENSINGTON MUSEUM.

This pillar case was invented for the use of the South Kensington Museum. Here, as in other public exhibitions, wall or vertical space is in great demand. This stand of frames supplies hanging space with perhaps the greatest possible economy of room. Within a diameter of about six feet, upwards of thirty frames, of imperial size, affording sixty sides, are hung on a pillar, which rotates to suit the

light. Sixty such frames hung against the wall in a line would require a length of one hundred and twenty feet. They have also this advantage over a portfolio, that the drawings or prints are constantly on view, and may be consulted with facility, and pen and ink drawings may easily be protected from too much light.

JACKSON & GRAHAM, 29, 33, 34, 35, 37 & 38 Oxford-street, London, W.

Carpets and Ornamental Cabinet Furniture—*Tapis et Meubles d'Ornement.*

The establishment of MESSRS. JACKSON & GRAHAM was founded in 1836, and has been continually increasing since that date. At the Great Exhibition of 1851, they received the award of a Prize Medal; at the 'Exposition Universelle,' Paris, 1855, the Gold Medal of Honour for 'Improvements in English Furniture,' and at the International Exhibition, 1862, a Medal for 'great excellence in design and workmanship,' with special commendation in the report of the Jury.

The following are the objects sent to the Paris Universal Exhibition, 1857:—

1. A cabinet, in the Italian renaissance style; of ebony, inlaid with ivory, engraved in the highest style of art, and enriched with lapis lazuli.

2. An étagère en suite.

3. A circular table en suite.

4. A fauteuil en suite.

5. A chair en suite.

6. A cabinet for china, in the Louis XIV. style, in ebony, inlaid with ivory.

7. A case for objects of art, in ebony, inlaid with ivory, in the cinque cento style.

8. A large oval table of amboyna, with rich marqueterie of various woods.

9. A ditto ditto writing table.

10. A ditto ditto, mounted with ormolu.

11. A small amboyna cabinet, inlaid with various woods.

12. A very fine thick Axminster carpet, of Persian design.

L'Établissement de MM. JACKSON ET GRAHAM fut fondé en 1836, et a continuellement gagné en importance depuis cette date. À la Grande Exposition de 1851, ils ont obtenu une Médaille; à l'Exposition Universelle de Paris de 1855, la Médaille d'Honneur en Or pour 'Perfectionnements en Articles d'Ameublement Anglais,' et à l'Exposition Internationale de 1862, une Médaille pour 'excellence de conception et de main-d'œuvre,' avec recommandation spéciale dans le rapport du Jury.

MM. J. ET G. ont envoyé les objets suivants à l'Exposition de Paris de 1857:—

1. Un cabinet dans le style italien de la Renaissance; en ébène, avec incrustations d'ivoire et ciselures de haut goût artistique, et enrichi de lapis lazuli.

2. Une étagère en suite.

3. Une table circulaire en suite.

4. Un fauteuil en suite.

5. Une chaise en suite.

6. Un cabinet, pour porcelaine, style Louis XIV, en ébène, avec incrustations d'ivoire.

7. Un meuble à renfermer des objets d'art, en ébène, avec incrustations d'ivoire, style du quinzième siècle.

8. Une large table ovale d'amboine, avec une riche marqueterie de divers bois.

9. Une table à écrire, ditto, ditto.

10. Une table montée en ormolu, ditto, ditto.

11. Un petit cabinet d'amboine, avec incrustations de divers bois.

12. Un très-fin et haute laine tapis d'Axminster, à dessin persan.

ALDERMAN, JOHN, 16 *Soho-square, London, w.*

The following gratifying Letter has been received by Mr. ALDERMAN from General GARIBALDI:—

‘Caprera, August 20, 1863.

‘Mr. ALDERMAN,—Some time ago I addressed to you a few words of thanks for your magnificent bed, which has been so great a comfort to me during my illness. Now I hear with regret that my letter has miscarried, and I willingly come forward again to express my gratitude to you. You have alleviated half my sufferings. My affectionate thankfulness will accompany you eternally. Accept a grasp of the hand from yours ever,

(Copy.)

‘G. GARIBALDI.’

COMFORT FOR INVALIDS.

By Her Majesty's Royal Letters Patent.

COMFORT POUR LES INVALIDES.

Par la Patente de Sa Majesté Royale.

This couch has three distinct graduating actions by which an invalid can be adjusted imperceptibly to any position without being touched by the nurse. The elastic mattress and the elastic adjusting foundation combined tender this couch free from all pressure, so that a patient cannot become bedsores by long confinement. The wedge-shaped down pillow is also constructed upon a geometrical principle, and is a great comfort.

Cette couche possède trois différents mouvements gradués, au moyen desquels l'invalidé peut être mis imperceptiblement dans chaque position voulue sans être assisté par le garde-malade. Le matelas élastique avec le fond élastique s'ajustant soi-même rend cette couche libre de toute pression, de manière que le malade ne peut jamais s'écrouler même pendant une longue maladie. Le coussin de dessous en forme de coin est également fabriqué d'après des principes géométriques et sera trouvé d'un grand confort.

The self-adjusting movable arms are also a great comfort. They are made to adjust themselves with the action of the back; they are also made to turn back or to take off. Attached to the back of the arms are candlesticks, fixed so as to keep the glare of the candles from the eyes of the patient while reading. The foot scroll is also movable, so that the couch can be elongated or shortened. The couch being upon large easy castors, the invalid can be wheeled from room to room with ease.

Les bras s'ajustant eux-mêmes et correspondant avec le mouvement du dos seront également un grand confort pour le malade; ils sont faits de manière à correspondre avec le mouvement du dos; ils peuvent être tournés en arrière ou ôtés tout à fait. Des chandeliers sont attachés au derrière du dos, de sorte que le malade peut lire sans que la lumière lui fasse mal aux yeux. Le marche-pied est aussi à mouvement, de manière que la couche peut être allongée ou raccourcie, et comme elle repose sur de grandes et bonnes roulettes l'invalidé peut être roulé avec aise d'une chambre à l'autre.

This reading, writing, or dining table is made to raise to any height. The top is made to slide from the centre of the pillar over either side of the couch; the top is divided in the centre, so that each half is made to revolve. From the horizontal far beyond the perpendicular it has rests and slides to hold a book in such a position as to enable an invalid to lay on the back and read without touching the book. When the table is not in use over the couch, or bed, the top slides back to the centre of the pillar, and becomes a handsome occasional table.

La table à lire, à écrire ou bien à diner, peut être élevée à chaque hauteur désirée; le haut en est fait à glisser du centre du pilier sur chaque côté de la couche; il est en outre divisé au centre de manière que chaque moitié peut changer sa position horizontale en une position perpendiculaire; il est muni des soutiens tenants le livre dans une telle position que l'invalidé, couché sur le dos, peut lire avec aise sans toucher le livre. Si la table ne sert pas à la lecture à côté de la couche ou du lit, le haut glisse vers le centre du pilier et elle devient une jolie pièce d'ameublement.

The patent portable equilibrium carrying chair.—By this chair, an invalid, however weighty or helpless, can be carried up or down stairs with perfect ease and safety. The chair always adjusting itself enables the two persons who carry to walk up and down stairs in the usual way, keeping themselves erect and their arms straight down, which avoids any strain upon their muscles. This chair folds up into the smallest possible space for travelling purposes.

La chaise patentée, portative et à équilibre.—Dans cette chaise, un invalidé, quel que soit sa pesanteur, peut dans l'état le plus faible, être transporté en bas ou en haut avec la plus parfaite sûreté; la chaise s'ajustant toujours au mouvement des personnes qui la portent, leur permet aussi de monter ou de descendre comme à l'ordinaire, de se tenir droit, les bras étendus, ce qui ne fatigue point les muscles. En se servant de la chaise en voyage, elle peut se plier dans la plus petite espace.

CLASS XVI.

PHILLIPS, W. P. & G., & PEARCE, 155 *New Bond-street, London, w.*

Engraved and Cut Glass, Lustres, and Lamps.

No. 1. A glass lustre, carrying 18 candles, composed of the finest crystal glass formed with air-lines twisted, and mounted with pendant glass ornaments, without the use of wires or pins—novel design.

No. 2. A frosted and engraved glass gaselier for 5 lights—Etruscan style.

No. 3. A painted china ditto ditto

No. 4. A silvered plate-glass plateau, very richly engraved, mounted with six raised glass dishes for fruit, and a centre dish for flowers and ferns. 2 glass Candelabra, and 8 Bouquet holders—Style Louis XVI.

No. 5. Two tall flower
glasses . . .

No. 6. Ditto ditto ditto

No. 7. Ditto ditto ditto
with Cornuco-
peïæ & centre
Tazza dish .

Unique specimens
of fine art glass
workmanship,
made at the works
of Messrs. Webb
and Sons.

No. 8. Two flower-stands in glass, with Pompeian tripod centre in ditto.

No. 9. Two glass candelabra with flower-holders, on richly engraved plate-glass stands, silvered—style Louis XVI.

No. 10. Two ditto ditto, with fern dish below.

No. 11. A plate-glass whatnot or trinket stand—new design.

No. 12. Two dessert dishes and supports, and four less ditto, of exquisite workmanship.

No. 13. Four less ditto.

No. 14. Six double magnum tankard jugs for claret cups, with twisted glass festoons, leaves, and nobs—unique.

No. 15. Two smaller ditto.

No. 16. Six water sets, richly engraved, various designs.

No. 17. Six magnum claret jugs, richly engraved with various designs, with convolvulus and wheat.

No. 18. Twelve quart ditto ditto.

No. 19. A claret jug and 2 decanters, very richly engraved.

No. 20. A magnum claret jug, a very fine specimen of engraving.

No. 21 to 30. Ten sets of patterns for table services, various designs.

No. 31. A large silvered plate-glass cross, very richly engraved with sacred emblems, on purple ground—'patented.'

No. 32. A ditto ditto on ruby ground, 'patented.'

No. 33. A ditto ditto, beautifully engraved with monogram and passion-flower—'patented.'

No. 34. Two smaller ditto ditto, engraved with sacred monogram, vine, corn, and ivy—'patented.'

No. 35. Two ditto ditto, engraved with sacred monogram and bright pearl bordering—'patented.'

No. 36. Two ditto ditto, engraved with sacred monogram only—'patented.'

No. 37. One silvered plate-glass cross, with sacred emblems very beautifully engraved on purple ground, XII. century—'patented.'

No. 38. Two Anglo-Venetian mirrors, very richly engraved on silvered-plate glass.

No. 39. Two ditto ditto, different designs.

No. 40. Two ditto ditto, ditto.

No. 41 to 50. Various specimens of flower-holders.

No. 51 to 60. Ditto, ditto, ditto, and fern stands.

CLASS XVII.

WEDGWOOD, JOSIAH, & SONS, *Etruria, Staffordshire.*

Earthenware in all its branches, viz. Cream Colour, Pearl White, Printed, Enamelled, Green Glaze, Rockingham, Majolica, Porous and Terra Cotta Wares; Stoneware; Chemical, Photographic, and Sanatory Wares; Parian Statuary, Jasper and Blue-and-White Bas-Relief Vases and Plaques; Black Basalt Vases and Statuary.

Received the Prize Medal in 1851 and 1862, and the Médaille de 1^{re} Classe at Paris, in 1865.

MESSRS. J. WEDGWOOD & SONS are manufacturers of earthenware. Not being manufacturers of china (which they gave up about 1815 in consequence of the press of orders at the peace), they confine their energies to the perfection of earthenware, to which they devote their whole attention. As regards the continental markets this is the branch of ceramic manufacture which alone exists to any extent. They have paid great attention to producing a light but durable class of goods to enter those countries where a heavy customs duty is still levied by weight. By this means they are able to meet the native manufacturers of several countries at an advantage, in spite of the expenses of transit and the custom-house. Their attention is not the less devoted to the requirements of the home market, in the production of a strong, clear ringing, rich glazed white ware. The patterns chosen are the newest in style and colour. Such are some now exhibited, designed by Dr. Dresser, both for dinner and toilet sets. In chemical wares, mortars, porous cells for batteries, as also in sanitary ware, so largely used in America as well as England, MESSRS. J. WEDGWOOD & SONS have always aimed at taking the lead by producing a regular and durable article at a moderate price.

In ornamental goods MESSRS. J. WEDGWOOD & SONS exhibit majolica dessert sets, sceaux and ornaments for the dinner and toilet table, also figures and vases by the best modellers and designers. In Parian statuary, MESSRS. J. WEDGWOOD & SONS produce a great variety of figures and busts modelled by Flaxman, Clodion, Woolner, Carrier, Wyon, and others. The same models are produced, along with a great number of vases and bas-reliefs, in black basalt, a hard material taking a fine sharp impression like bronze, and maintaining the proportions of the original model after baking, more accurately than Parian. It was invented a century ago by Josiah Wedgwood, F.R.S., and adapted to the production of vases painted

in encaustic colours, in imitation of the Greek campanian vases, then discovered by Sir Wm. Hamilton. This material is suited for the decoration of halls, libraries, and dining-rooms. MESSRS. J. WEDGWOOD & SONS still manufacture the ware called jasper, invented about 1766, by J. Wedgwood, F.R.S., and which now commonly goes by the name of Wedgwood ware. The perfection of this material is the sharpness of the relief, combined with the delicacy and smoothness of the surface. The pale blue sage green, and lilac grounds throw up in sharp outline the bas-reliefs laid on them. These are modelled from the antique mostly, by Flaxham, Pacetti, Hackwood, and many other modellers of the last century. This ware is represented in the Exhibition by a great variety of plaques, vases, sceaux and cameos; also by a novel feature in its application to dessert services, for which it is well adapted by the agreeable contrast it makes with glass and with silver. MESSRS. J. WEDGWOOD & SONS, wishing to show how beautiful a feature this material might be made in architectural decoration, exhibit a chimney piece fitted with jasper plaques. The idea was warmly taken up by Messrs. Nesfield & Shaw, of London, the architects, who adopted the style of the carved panelled chimney pieces found in old manor houses. The framework is of the finest picked alabaster. The plaques are of sage green jasper, with white figures and arabesques. In the seven panels above the fireplace are Flaxman's dancing girls, modelled from mural paintings at Pompeii. In the upper row of panels is the story of Achilles, by Pacetti, while on the jambs are female figures from the judgment of Paris. The whole is 7 or 8 feet high and as many wide.

MESSRS. WEDGWOOD have been fortunate in having the services of an artist of note in Mr. Lessore, whose facile drawing, boldness of outline, and great appreciation of colour may be judged of by the artist and connoisseur, in many works at the present Exhibition. He is the first man who has brought the free pencil of an artist to the decoration of ceramic wares.

CLASS XVIII.

NAIRN, MICHAEL, & CO., *Kirkcaldy, Scotland.*Floor-cloths—*Toiles Cirées pour Planchers.*
Wachseleinwand für Fussböden—*Incerati da Pavimenti.**Obtained the Honorary Certificate at the International Exhibition, London, 1862.*

M. NAIRN & Co.'s Manufactory, which is now the largest floor-cloth manufactory in the world, is situated at Kirkcaldy, near Leith, having direct communication to all the principal ports in Great Britain.

Their goods are of the first quality, and are manufactured in sizes from $\frac{1}{2}$ yd. to 8 yds. wide by 12, 15, 20 and 25 yds. long, without seam. They are made in all the styles of mosaics, oaks, marbles, chintzes, encaustic tilings, Turkey carpetings, parquetry, &c., to suit the requirements of different countries.

M. NAIRN & Co. have pleasure in referring to their exhibit in Class 18, as specimen of style and execution; particular notice is requested to the finish, which, by their mode of printing, presents a solid surface of paint, affording a superior wearing surface to the old system of open printing (which only partially covers the ground) and also imparting to the designs a clearness of definition and a depth of tone impossible of attainment by the old method.

Ont obtenu le Certificat Honoraire à l'Exposition Internationale de Londres, en 1862.

La Manufacture de M. NAIRN ET CIE., actuellement la plus importante manufacture de toiles cirées pour planchers existant au monde, est située à Kirkcaldy, près Leith, et se trouve en communication directe avec tous les principaux ports de la Grande-Bretagne.

Leurs produits sont de première qualité, et se fabriquent en grandeurs variant de $\frac{1}{2}$ yard—45,72 m.—à 8 yards—7,32 m.—de large sur 12, 15, 20 et 25 yards—10,98 m., 13,71 m., 18,28 m., et 22,85 m.—de long, sans couture. Ils comprennent tous les styles de mosaïques, imitations de bois de chêne et de marbres, perses, carreaux à l'encaustique, tapis de Turquie, parquetterie, etc. etc., afin de s'adapter aux besoins de tous les pays.

M. NAIRN ET CIE. se plaisent à renvoyer le public à leur exposition, Classe 18, comme spécimen de style et d'exécution; on est prié de remarquer surtout le fini de ces produits, fini dû à leur mode d'impression, qui offre une surface solide de peinture, donnant ainsi une surface de résistance bien supérieure à celle obtenue par l'ancien système d'impression à jour, et qui communique en outre aux dessins une netteté de contours et une profondeur de ton impossibles à obtenir par la vieille

Erlangten das ehrenvolle Zeugniß auf der internationalen Industrie-Ausstellung, London, 1862.

M. NAIRN & Co.'s Fabrik, welche nun die grösste Wachsfussdecken-Fabrik der Welt ist, findet sich zu Kirkcaldy, nahe bei Leith, und hat directe Verbindung mit allen den hauptsächlichsten Häfen in Grossbritannien.

Ihre Güter sind von der ersten Qualität und werden in Grössen von $\frac{1}{2}$ Yard bis 8 Yard Weite und 12, 15, 20 und 25 Yard Länge, ohne Naht, fabricirt. Dieselben werden in allen den Stilen von Mosaik, Eiche, Marmor, Zitz, encaustischen Ziegeln, Türkischen Teppichen, Parquetterie u. s. w., je nach den Bedürfnissen der verschiedenen Länder gemacht.

M. NAIRN & Co. beehren sich, auf ihre Darstellung in Klasse 18 als Probe des Stiles und der Ausführung zu verweisen; sie bitten um besondere Beachtung der Appretur, welche, in Folge der Druckmethode, eine dichte Farbenoberfläche darbietet, somit eine bessere Oberfläche zum Tragen als die alte Methode des offenen Drucks (welche nur theilweise den Grund bedeckt) hat und ebenso den Dessins eine Klarheit der Bestimmung und eine Tiefe des Tones giebt, welche durch die alte Methode zu erlangen unmöglich waren.

Ripportarono Menzione Onorevole all'Esposizione Internazionale di Londra, 1862.

La Fabbrica dei Sigri. NAIRN E CIA., che è adesso la più gran fabbrica di incerati da pavimenti nel mondo, è situata a Kirkcaldy, presso Leith, ed ha comunicazione diretta con tutti i porti principali della Gran Bretagna.

Le loro merci sono di prima qualità, e sono fabbricate in pezze alte da $\frac{1}{2}$ fino 8 yarde e lunghe da 12, 15, 20 fino a 25 yarde senza cucitura. Sono di ogni stile, a mosaico, a querce, a marmi, a indiane, a pianelle ad encaustico, a tappeti turchi, a pavimento in legno intarsiato, ecc., per soddisfare alle richieste dei diversi paesi.

I Sigri. NAIRN E CIA. hanno il piacere di riferire agli oggetti da loro esposti alla Classe 18, come saggi di stile e di esecuzione, e invitano speciale attenzione alla finezza del loro lavoro, che pel loro modo di stampatura presenta una superficie solida di colore, che offre una superficie durevole, superiore a quella del vecchio sistema di stampa porosa (che cuopre solo parzialmente il fondo), e che dà anche ai disegni una chiarezza di definizione ed una forza di intonazione, impossibile ad ottenersi col vecchio sistema.

WILKINSON, JOHN, SON, & CO., *St. Helen's Mills, Leeds, England**Established 1839.*

Original Manufacturers of Felt Carpeting.

Premiers Fabricants de Tapis de Feutre.

Die ursprünglichen Fabricanten von Filz-Fussdecken.

*Fabbricanti originali dei Tappeti in Feltro.**Warehouses.*53 & 54 Aldermanbury, London, E.C.;
13 Rook-street, Manchester;18 Rue du Mail, Paris;
42 Rue Zerezo, Station du Nord, Bruxelles.*Prize Medal, International Exhibition, 1851.**The only Prize Medal, International Exhibition, 1862.*

See 'Jurors' Award Book,' page 265:—

‘Printed woollen carpets, especially for a great variety of choice designs, good workmanship and cheapness.’

Prize Medal, Yorkshire Industrial Exhibition, 1866.

These carpets are made and sold in all qualities and prices, from 10d. per yard, for 30 in. in width, up to 3s. 6d. per yard for 52 inches. A large assortment of designs always on hand, at 18 Rue du Mail, Paris, and their other branch houses, as above.

Manufacturers also of fine cloth for boots, &c. &c., saddle cloths for riding, and numnahs, or cavalry blankets, as supplied to the British cavalry regiments at home and abroad; also, all descriptions of felt manufacture.

*Médaille à l'Exposition Internationale de 1851.**La seule Médaille décernée à l'Exposition Internationale de 1862.*

Voir le 'Régistre des Récompenses décernées par le Jury,' page 265:—

‘Tapis de laine imprimés, spécialement pour leur grande variété de dessins de choix, l'excellence de la main d'œuvre et le bon marché.’

Médaille à l'Exposition Industrielle du Yorkshire, en 1866.

Ces tapis sont fabriqués en toutes qualités et vendus à tous prix, depuis 1 franc le yard—91,43c.—sur 30 pouces—76,20c.—de large jusqu'à 4 fr. 35 ces. le yard—52 pouces—1,32 m.—de large. Un assortiment considérable de dessins se trouve toujours à leur maison, 18 Rue du Mail, à Paris, ainsi que dans leurs autres maisons succursales aux adresses ci-dessus.

Fabriquent également des étoffes fines pour bottines, etc., etc., housses pour selles, numnahs, ou couvertures de cheval pour la cavalerie, telles qu'elles sont fournies aux régiments de cavalerie anglaise dans le Royaume-Uni et ses dépendances; enfin toutes espèces de produits feutrés.

*Preis-Medaille, internationale Industrie-Ausstellung, 1851.**Die einzige Preis-Medaille, internationale Industrie-Ausstellung, 1862.*

Siehe 'Jurors' Award Book,' Seite 265:—

‘Gedruckte wollene Teppiche, besonders für eine grosse Verschiedenheit der ausgewähltesten Dessins, gute Arbeit und Billigkeit.’

Preis-Medaille, Yorkshire-Industrie-Ausstellung, 1866.

Diese Teppiche werden gemacht und verkauft in allen Qualitäten und zu allen Preisen, von 1 Sgr. per Yard, für 30 Zoll in Weite, bis zu 1 Thlr. 5 Sgr. per Yard, für 52 Zoll. Eine grosse Auswahl von Dessins ist fortwährend vorrätig in 18 Rue du Mail, Paris, und in ihren andern Zweighäusern, wie oben.

Ebenso Fabricanten von feinem Tuch für Schuhe u. s. w. u. s. w., Satteltuch zum Reiten und Numnahs oder Cavallerie-Decken, wie sie für die Britischen Cavallerie-Regimenter hier und in den Colonien geliefert werden. Ebenso alle Beschreibungen von Filz-Manufacturaaren.

*Medaglia dell' Esposizione Internazionale del 1851.**Unica Medaglia dell' Esposizione Internazionale del 1862.*

Vedasi 'Libro delle Aggiudicazioni dei Giurati,' pagina 265:—

‘Tappeti in lana stampati, specialmente per una gran varietà di scelti disegni, buona fabbricazione, ed economia.’

Medaglia dell' Esposizione d'Industria del Yorkshire, 1866.

Questi tappeti sono fatti e venduti in tutte le qualità e prezzi, da 10 pence per yarda, per larghezza di 30 pollici, fino a 3½ scellini per yarda per larghezza di 52 pollici. Un grande assortimento di diversi disegni sempre alla mano al No. 18 Rue du Mail, Parigi, ed alle altre succursali, come sopra.

Fabbricanti anche di panni fini per stivaletti, ecc., gualdrappe per l'equitazione, e numnahs, ossia copertine da cavalleria come quelle fornite ai reggimenti di cavalleria britannica tanto in paese come all'estero; ed anche ogni genere di manifattura in feltro.

CLASS XXIII.

DESCRIPTIVE CATALOGUE OF HOROLOGICAL INSTRUMENTS
CATALOGUE DESCRIPTIF D'INSTRUMENTS D'HORLOGERIE.

Exhibited by M. F. DENT & CO., 33 & 34 COCKSPUR-STREET, CHARING-CROSS, LONDON.

Makers and Exhibitors of Chronometers, Watches, and Clocks.

Fabricants et Expositeurs de Chronomètres, Montres et Horloges.

N.B.—The workmanship and materials of the articles here exhibited are of the same quality and degree of excellence as all others of the same classes supplied to purchasers in the ordinary course of business.

N.B.—*La main-d'œuvre et les matériaux des articles ci-exposés sont des mêmes qualité et degré d'excellence que tous autres de même classe fournis aux acheteurs dans le cours ordinaire des affaires.*

MARINE CHRONOMETERS.

1. A MARINE CHRONOMETER, fitted with a new auxiliary compensation balance invented by M. F. DENT. The construction of this balance is illustrated by the annexed drawing. The supporting arms, *a a*, the compound laminated rims, *b b*, and the timing and compensation screws or weights, are precisely the same as corresponding parts of an ordinary compensation balance. It is well known that such a balance, if adjusted so as to compensate satisfactorily for the temperature error, at two points of the thermometric scale 30° to 40°

CHRONOMÈTRES DE MARINE.

1. CHRONOMÈTRE DE MARINE muni, d'un nouveau balancier à compensation auxiliaire inventé par M. F. DENT. La construction de ce balancier est illustrée par le dessin ci-joint. Les bras de support, *a a*, les cercles à lames bimétalliques, *b b*, et les vis ou poids de compensation et de réglage, sont précisément les mêmes que les parties correspondantes d'un balancier ordinaire à compensation. Or, il est bien connu qu'un tel balancier, s'il est ajusté de façon à effectuer une compensation satisfaisante de l'erreur de température, à deux

apart, fails more or less in temperatures beyond that range, the error increasing at a faster rate than the temperature varies, and always in the losing direction; the cause being that the change of the elastic force of the balance spring, and the compensating change of the moment of inertia of the balance, differ in their rates of variation.

If such a balance, therefore, be adjusted as accurately as possible for a middle and a high temperature, say for 60° and 95° Fahr., the

points of l'échelle thermométrique, 30° à 40° d'étendue Fahr.— 0° à 5° centigrade—fait défaut plus ou moins dans les températures dépassant ces points, l'erreur croissant dans une proportion plus rapide que ne varie la température, et toujours en retard; la cause en étant que le changement dans l'élasticité du ressort du balancier, et le changement de compensation dans le moment d'inertie du balancier, diffèrent dans leurs vitesses de variation.

Qu'un semblable balancier, par conséquent, soit ajusté avec toute la précision possible pour une température moyenne et haute, disons pour

chronometer will lose upon its rate in all temperatures below 60°, the loss increasing at a faster rate than the temperature diminishes. In the balance here exhibited, this error is compensated for, by the two auxiliary springs, *d d*, which by a gentle pressure upon two pins *f f*, placed near the free ends of the laminated rims, restrain their outward expansion, and thereby prevent that too great increase of the moment of inertia of the balance, which is the cause of the defect of compensation under the preceding circumstances. The fixed ends of the springs are carried at *e e*, by a pair of arms *c c*, firmly secured to the principal arms *a a*. The springs are adjusted to come into action only when the primary compensation begins to fail, and their influence increases gradually as the temperature falls. It is found advantageous to thicken the springs a little towards the middle of their length; they are also made of considerable length, and to stand in the direction shown, in order that their effect upon the balance shall increase or diminish as gradually as possible; by these expedients also injurious friction between the free ends of the springs and the pins is avoided. Their adjustment is facilitated by the use of two small screws with tapered heads, *g g*, which press against the feet of the springs, and act as inclined planes in making very small changes in their positions. This chronometer is fitted with Mr. Hammersley's 'tria in uno' balance spring.

The chronometer here exhibited is only the second which has been fitted with this kind of auxiliary compensation. The first was tried last year in the public competitive trials at Greenwich Observatory. It stood fourth in the order of merit in the published official report of the Astronomer Royal, and was purchased by the Government, on his recommendation, at an honorary price.

The published official abstract of its rate was as follows:—

Least weekly sum of		
daily rates during	11.5	seconds losing
29 weeks . . .		
Greatest . . .	1.1	” ”
	—	
Difference between		
the greatest and	10.4	” ”
the least . . .		
	—	

Greatest difference between two successive weeks, 5.8 seconds.

There were 56 chronometers on competitive trial, the average results shown by the better chronometers were unusually good, and the temperature during the 29 weeks' trial varied from 31° to 101° Fahr.

Another chronometer, by the present exhibitors, fitted with a new experimental balance

60° et 95° Fahr.—15° à 35° centigrade—le chronomètre retardera dans toutes températures au-dessous de 60°, la perte augmentant dans une proportion plus rapide que la température ne diminue. Dans le balancier ci-exposé, cette erreur se compense au moyen des deux ressorts auxiliaires, *d d*, qui par une pression douce sur deux goupilles *f f*, placées près des extrémités libres des cercles ou lames du balancier, restreignent leur expansion en avant, et préviennent ainsi le trop grand accroissement du moment d'inertie du balancier, ce qui est la cause du défaut de compensation dans les circonstances précédentes. Les extrémités fixes des ressorts sont portées en *e e*, par deux bras *c c*, fermement assujettis aux bras principaux *a a*. Les ressorts sont ajustés de façon à n'agir que lorsque la compensation ordinaire commence à faire défaut, et leur action augmente graduellement à mesure que la température baisse. Il a été trouvé avantageux d'épaissir un peu les ressorts vers le milieu de leur longueur; ils sont aussi d'une longueur considérable et disposés de façon à se maintenir dans la direction que montre le dessin, afin que leur effet sur le balancier s'accroisse ou diminue aussi graduellement que possible; ces dispositions préviennent aussi un frottement nuisible entre les extrémités libres des ressorts et des goupilles. Leur ajustement est facilité par l'emploi de deux petites vis à têtes coniques, *g g*, qui pressent contre les pieds des ressorts, et agissent comme des plans inclinés en opérant de très-légers changements dans leurs positions. Ce chronomètre est muni du ressort de balancier 'tria in uno' de M. Hammersley.

Le chronomètre ici exposé est seulement le second qui ait été muni de cette espèce de compensation auxiliaire. Le premier a été éprouvé l'an dernier dans les concours publics qui eurent lieu à l'Observatoire de Greenwich. Il occupa la quatrième place dans l'ordre de mérite dans le rapport officiel publié de l'Astronome Royal, et fut acheté par le Gouvernement, sur sa recommandation, à un prix honoraire.

L'extrait officiel publié de sa marche est comme suit:—

Total hebdomadaire, la plus		
petite des différences journalières pendant 29 semaines . . .	11.5	secondes de perte
La plus grande . . .	1.1	” ”
	—	
Différence entre le plus et le moins . . .	10.4	” ”
	—	

Différence la plus grande entre deux semaines successives, 5.8 seconds.

Il y avait 56 chronomètres participant à ce concours; les résultats moyens montrés par les meilleurs furent exceptionnellement bons, et la température varia pendant les 29 semaines que durèrent les épreuves de 31° à 101° Fahr.

Un autre chronomètre, fabriqué par les présents exposants, muni d'un nouveau balancier

entirely different from the one here described, took part in the same trial, but failed to give the expected results.

2. A MARINE CHRONOMETER, fitted with DENT's well-known 'staple balance.'

The use of this balance during the past 24 years, and its successful application to several hundreds of marine chronometers and chronometer clocks, have established it as one of the most successful and reliable inventions, for correcting the 'secondary error' of compensation.

3. A MARINE CHRONOMETER, fitted with the balance invented some years ago by Mr. John Hartnup, the Astronomer at the Public Observatory at Liverpool. This balance, although difficult to manufacture and adjust, has given good results in extreme variations of temperature, when made and applied with the requisite skill.

4. A MARINE CHRONOMETER, with a new kind of flat-rimmed balance recently invented by M. F. DENT, with a view to perfect compensation in extreme variations of temperature.

The principle of its mode of action is the same as that of DENT's 'staple balance' (see No. 2), the compensating weights describing, in their change of position, a curved path, in the plane of the axis of the balance, approximating to a circular arc. Compared with the ordinary balance, the moment of inertia of this new balance will diminish more quickly as the temperature rises above, and will increase more slowly as it falls below, any given mean. It is thought that another defect, to which all balances known to the present exhibitors are more or less liable, will be mitigated: that is, the tendency which their compound laminæ have to 'set,' when exposed continuously for a considerable time to extremes of temperature, owing to their limits of elasticity being over-passed. This is expected to be mitigated by the form of the balance here exhibited, permitting the laminæ to be made longer and thicker than usual.

Whether these anticipations are to be realised has yet to be proved by the results of accurate and long-continued trials, now in progress.

5. A SELECTION OF COMPENSATION BALANCES of varied construction, including an example of each of those fitted to Nos. 1, 2, 3, and 4.

POCKET CHRONOMETERS.

6. A POCKET CHRONOMETER, in gold hunting case, with fusee train, keyless winding, and winding indicator. Attention is invited to this watch as being fitted with Hammersley's 'tria in uno' balance spring, which has been perfected within the last few years, and when

d'expérimentation, mais entièrement différent de celui qui vient d'être décrit, participa à ce même concours, mais ne donna point les résultats attendus.

2. CHRONOMÈTRE DE MARINE, muni du 'staple balance,' bien connu, de DENT.

L'usage de ce balancier durant les dernières 24 années, et son heureuse application à plusieurs centaines de chronomètres de marine et horloges chronométriques, l'ont posé comme étant une des inventions les plus heureuses et les plus sûres pour corriger l'erreur secondaire de compensation.

3. CHRONOMÈTRE DE MARINE, muni du balancier inventé il y a quelques années par M. John Hartnup, Astronome de l'Observatoire Public de Liverpool. Ce balancier, quoique difficile à fabriquer et à ajuster, a donné de bons résultats dans des variations extrêmes de température, alors qu'il est fait et appliqué avec l'habileté nécessaire.

4. CHRONOMÈTRE DE MARINE, avec une nouvelle espèce de balancier à cercles plats, récemment inventé par M. F. DENT dans le but d'une compensation plus parfaite dans les variations extrêmes de température.

Le principe de son mode d'action est le même que celui du 'staple balance' de DENT (voir No. 2), les poids de compensation décrivant, dans leur changement de position, une courbe dans le plan de l'axe du balancier, approchant d'un arc de cercle. Comparé au balancier ordinaire, le moment d'inertie de ce nouveau balancier diminuera plus rapidement à mesure que la température s'élèvera au-dessus, et s'accroîtra plus lentement à mesure qu'elle s'abaissera au-dessous, d'une moyenne donnée. On pense aussi qu'un autre défaut, auquel tous les balanciers connus aux présents exposants sont plus ou moins sujets, sera amoindri dans ce balancier: c'est-à-dire, la tendance qu'ont leurs lames bi-métalliques à rester forcées quand elles sont exposées continuellement durant un laps de temps considérable à des extrêmes de température, parce que leurs limites d'élasticité sont dépassées. On espère que par la forme du balancier en question, ici exposé, permettant de faire les lames plus longues et plus épaisses que d'habitude, ce défaut sera ainsi mitigé.

Les résultats de longues et exactes épreuves, maintenant en train de se faire, prouveront si ces anticipations doivent se réaliser ou non.

5. CHOIX DE BALANCIERS À COMPENSATION de diverses constructions, y compris un exemple de chacun de ceux adaptés aux Nos. 1, 2, 3 et 4.

CHRONOMÈTRES DE POCHE.

6. CHRONOMÈTRE DE POCHE, à boîte de chasse en or, avec chaîne et fusée, remontoir sans clef, avec indicateur. On appelle l'attention sur cette montre comme étant munie du ressort de balancier 'tria in uno' de Hammersley, perfectionné dans ces dernières

properly made and applied is believed to possess important advantages, over both the ordinary cylindrical spring, or helix, usually applied to chronometers, and the flat spiral.

The 'tria in uno' spring has its middle portion coiled in a cylindrical or helical form, with both ends formed into two flat spirals, approaching the centre of motion.

A more detailed description of this spring will be found in 'M. F. DENT's Exhibition Pamphlet, 1867.'

7. A POCKET CHRONOMETER, in gold hunting case, with fusee train, keyless winding, and winding indicator. This chronometer is fitted with the 'duo in uno' balance spring, a form which partakes to a great extent of the advantages attributed to the 'tria in uno,' from which it differs in having the cylindrical coils combined with flat spiral coils at one end only, instead of at both ends. It is an easier spring to make than the 'tria in uno.'

8. A POCKET CHRONOMETER, with fusee train and winding indicator. It is fitted with the 'double flat spiral' balance spring, with a view to combine perfect adjustments with flatness, to meet the wishes of purchasers who desire a flat chronometer watch, without sacrificing accurate time-keeping qualities. This spring is considered to afford great facilities for the adjustment, both of isochronism and the positions, compared with the ordinary flat spiral.

9. A CHRONOMETER CHRONOGRAPH, in gold case, with open face. This chronograph has a lever movement controlled by its own escapement without any connection whatever with the movement or escapement of the chronometer. This combination, now introduced by M. F. DENT & Co., differs from all independent seconds or other kinds of observation watches known to them, and is submitted as possessing the accuracy of the best chronometer of its size, combined with an instrument for exhibiting, with minute precision, the time of commencement, duration, and termination of any event or circumstance, such as a race, the flight of a shot, the revolutions of machinery, the rate of the pulse, astronomical observations, &c. &c.

10. A SELECTION OF POCKET CHRONOMETERS of ordinary construction.

11. A SELECTION OF BALANCE SPRINGS, including the 'tria in uno,' 'duo in uno,' 'double flat spiral,' cylindrical and ordinary flat spirals.

WATCHES.

12. A GOLD 'TACT' WATCH, for the use of persons who are blind, and for other persons who desire to ascertain the time in the dark, and prefer a watch of this kind to a repeater.

années, et qu'on croit posséder, quand il est convenablement fabriqué et appliqué, d'importants avantages aussi bien sur le ressort cylindrique ordinaire, ou hélice, habituellement appliqué aux chronomètres, que sur le spiral plat.

Le ressort 'tria in uno,' a sa partie du milieu roulée en forme cylindrique ou hélicoïdale, avec les deux extrémités formant deux spiraux plats, s'approchant du centre du mouvement.

Une description plus détaillée de ce ressort se trouvera dans la brochure de l'Exposition de M. F. DENT, 1867.

7. CHRONOMÈTRE DE POCHE, à boîte de chasse en or, avec chaîne et fusée, remontoir avec indicateur. Ce chronomètre est muni du ressort de balancier 'duo in uno,' forme qui possède une grande partie des avantages attribués à celui dit 'tria in uno,' dont il diffère en ce qu'il n'a ses enroulements cylindriques combinés avec les spiraux plats qu'à une seule extrémité au lieu de l'avoir aux deux. Ce ressort est plus facile à fabriquer que le 'tria in uno.'

8. CHRONOMÈTRE DE POCHE, avec chaîne et fusée et indicateur. Muni du ressort de balancier en double spiral plat, à l'effet de combiner la perfection des ajustements avec le minimum d'épaisseur, pour satisfaire aux goûts des acheteurs qui veulent un chronomètre de poche plat sans sacrifier pour cela les qualités de précision. On considère que ce ressort fournit de grandes facilités pour l'ajustement, tant de l'isochronisme que des positions, en comparaison du spiral plat ordinaire.

9. CHRONOMÈTRE À CHRONOGRAPHIE, à boîte d'or et à verre. Ce chronographe a un mouvement contrôlé par son propre échappement (à ancre), sans aucun rapport quelconque avec le mouvement ou échappement du chronomètre. Cette combinaison, maintenant introduite par M. F. DENT et C^{ie}, diffère de toutes montres à secondes indépendantes ou autres, pour observation, connues d'eux, et on considère qu'elle possède l'exactitude du meilleur chronomètre de sa dimension, combinée avec un instrument destiné à indiquer avec une précision minutieuse le temps de commencement, de durée et de fin, de tout événement ou circonstance quelconque, tel qu'une course de chevaux, la vitesse d'un boulet, les révolutions d'une machine, la vitesse du pouls, des observations astronomiques, etc. etc.

10. CHOIX DE CHRONOMÈTRES DE POCHE de construction ordinaire.

11. CHOIX DE RESSORTS DE BALANCIERS, comprenant le 'tria in uno,' le 'duo in uno,' le spiral double plat, le spiral cylindrique et le spiral ordinaire.

MONTRES.

12. UNE MONTRE À 'TACT' EN OR, à l'usage des personnes aveugles, ou autres qui désirent s'assurer de l'heure dans l'obscurité, et préfèrent une montre de cette espèce à une

A peculiar advantage of the watch here exhibited, is that it has a safety arrangement for preventing damage, in the event of too much pressure being applied to the external hand.

The whole of this 'Tact' arrangement is the well-known invention of the celebrated Brequet.

13. A GOLD MINUTE REPEATER, of the best construction usual in England. This watch has a fusee train, keyless mechanism, and lever escapement, of English construction; as is usual in such watches, the repeating work is manufactured in Switzerland, and the English movement mechanism, &c., is adapted to it in the best possible manner.

14. A GOLD ENGLISH REPEATER.—This repeater is of entirely English manufacture, by M. F. DENT & Co., and is submitted as having a better arrangement of the repeating mechanism than the foreign work of the same kind, being much better adapted to the conditions of a fusee train with keyless mechanism. It is so contrived as to combine economy of space with the most substantial and accurate workmanship.

15. SMALL-SIZED LADIES' GOLD WATCHES, with fusee trains, lever escapements, and compensated balances. These are submitted as exhibiting, in a small compass, a combination capable of realising the most accurate time-keeping results, with durability in wear, which can be obtained in watches of so small a size. This combination of qualities cannot be had without the fusee train, if the lever escapement is used, and no other escapement is so well adapted for general wear.

16. GOLD WATCH WITH THE RESILIENT LEVER ESCAPEMENT.—This escapement is the invention of Mr. J. F. Cole, and is considered by many as one of the most perfect forms assumed by the lever escapement. Its advantage lies in the avoidance of the 'banking error.'

17. A GOLD INDEPENDENT SECONDS WATCH, with fusee train.

18. A SELECTION OF LADIES' ORNAMENTAL WATCHES, with decorations in jewels and enamelling, with châtelaïnes to match.

19. SPECIMENS OF WATCH ORNAMENTATION.

20. TWO SILVER LEVER COMPENSATED WATCHES, submitted as excellent instruments for the use of travellers on overland expeditions, and as better adapted to the contingencies of rough wear than pocket chronometers.

CLOCKS.

21. A WORKING MODEL OF A TURRET CLOCK MOVEMENT.—M. F. DENT & Co. exhibit this as a model of the most accurate and serviceable kind of large clock which can be made at the

montre à répétition. Un avantage particulier qu'offre la montre ici exposée consiste en ce qu'elle est munie d'une disposition de sûreté afin de la préserver de tout dommage au cas où une pression trop forte serait appliquée à l'aiguille extérieure.

Toute l'invention de cette montre à 'Tact' est due au célèbre Brequet.

13. MONTRE À RÉPÉTITION À MINUTES, de la meilleure construction habituelle en Angleterre. Cette montre est à fusée et à remontoir, et échappement à ancre, de construction anglaise; ainsi qu'il est d'usage pour les montres de cette espèce, les mouvements de répétition ont été fabriqués en Suisse, et le mécanisme anglais y est adapté de la meilleure manière possible.

14. UNE MONTRE À RÉPÉTITION ANGLAISE.—Entièrement de fabrique anglaise, par M. F. DENT et C^{ie}., et offerte comme ayant une meilleure disposition du mécanisme à répétition que le travail étranger de la même espèce, étant mieux adaptée aux conditions d'une chaîne et fusée avec remontoir sans clef. Cette montre est conçue de façon à combiner l'économie d'espace avec la main-d'œuvre la plus solide et la plus soignée.

15. MONTRES DE DAMES, EN OR DE PETITE DIMENSION, avec chaîne et fusée, échappement à ancre, et balanciers compensés. Elles sont soumises au public comme exhibant, sous une forme très-petite, une combinaison capable de donner les résultats de précision les plus exacts, ainsi que la plus grande durée qu'il soit possible d'obtenir dans des montres d'une dimension aussi minime. Cette combinaison de qualités ne saurait s'obtenir sans la chaîne et fusée, si on se sert de l'échappement à ancre, et nul autre n'est aussi bien adapté à l'usage général.

16. MONTRE EN OR AVEC L'ÉCHAPPEMENT RESILIENT.—Cet échappement est de l'invention de M. J. F. Cole, et est considéré par nombre de personnes comme une des formes les plus parfaites qu'ait jamais pris l'échappement à ancre. Ses avantages consistent dans ce qu'ils évitent les erreurs causées par les reballements.

17. MONTRE EN OR À SECONDES INDEPENDANTES, avec chaîne et fusée.

18. CHOIX DE MONTRES DE DAMES, DE LUXE, ornées de pierreries et d'émaux, avec châtelaïnes assorties.

19. SPÉCIMENS D'ORNEMENTATION POUR MONTRES.

20. DEUX MONTRES EN ARGENT À ÉCHAPPEMENT À ANCRE ET BALANCIERS COMPENSATEURS, soumises au public comme étant d'excellents instruments pour l'usage de voyageurs dans des expéditions sur terre, et mieux adaptés aux exigences d'un usage rude que les chronomètres de poche.

HORLOGES.

21. MODÈLE FONCTIONNANT D'UN MOUVEMENT D'HORLOGE DE BEFFROI OU CLOCHER.—M. F. DENT et C^{ie}. l'exposent comme modèle de l'espèce la plus précise et la plus utile des

present day. It is fitted with the now well-known 'double three-legged gravity escapement,' the invention of an amateur of high scientific attainments. It has also a gravity remontoir of an improved construction, adjusted in the present model so as to let off the hands at intervals of 15 seconds, but in its application to turret clocks the interval would be 30 seconds. This combination permits the construction of large turret clocks, capable of keeping a close rate with an accuracy equal to that of the best observatory regulator, and will moreover maintain that rate for a much longer time than the best clock controlled by any other known escapement whose perfect condition is dependent upon oil.

In 'M. F. DENT's Exhibition Pamphlet, 1867,' will be found a drawing of the above escapement with a detailed description.

22. AN OBSERVATORY CLOCK, OR REGULATOR. This clock has the mercurial pendulum, and is fitted with an important modification of the gravity escapement, recently invented by Dr. James Clark, with the object of greatly diminishing the friction of unlocking the escapement.

For a drawing and full description of this beautiful and ingenious invention, see 'M. F. DENT's Exhibition Pamphlet, 1867.'

23. AN OBSERVATORY CLOCK, OR REGULATOR, fitted with Graham's dead escapement and mercurial pendulum, in mahogany frame with plate glass.

24. A BRACKET CLOCK, striking hours and quarters upon bell springs. It has a half-second mercurial pendulum and gravity escapement.

25. A DRAWING-ROOM OR LIBRARY CLOCK, fitted with the chronometer escapement, and with DENT's 'staple balance' compensated and adjusted for extreme variations of temperature. This clock chimes the quarters upon eight bells, has a perpetual calendar of the most perfect construction, exhibiting the bissextile, the phases of the moon, and the equation of time. It has a finely finished case of gilt bronze and plate glass. This perpetual calendar is a French invention.

26. A BRACKET CLOCK, in ebony case, striking chimes upon bell springs, with jewelled escapement and silver dial.

27, 28, 29, 30, and 31. A SELECTION OF CHRONOMETER AND LEVER CLOCKS for the library and drawing room, in bronze and gilt bronze cases.

Some ornamental time-pieces.

grandes horloges qui puisse se fabriquer actuellement. Il est muni du 'double three-legged gravity escapement,' maintenant bien connu, et l'invention d'un amateur de haute capacité scientifique. Il a aussi un remontoir de gravité d'une construction perfectionnée, ajusté dans le présent modèle, de façon à laisser échapper les aiguilles à des intervalles de 15 secondes ; mais dans son application aux horloges de beffroi cet intervalle serait de 30 secondes. Cette combinaison permet la construction d'horloges de ce genre d'une grande dimension, capables de maintenir une marche exacte avec une précision égale à celle du meilleur régulateur d'observatoire, et en outre beaucoup plus longtemps que la meilleure horloge contrôlée par tout autre échappement connu dont la parfaite condition dépend de l'huile.

Dans la brochure d'Exposition de M. F. DENT on trouvera un dessin de l'échappement ci-dessus avec description détaillée.

22. HORLOGE D'OBSERVATOIRE, OU RÉGULATEUR.—Cette horloge est munie du pendule à mercure, et renferme une importante modification de l'échappement de gravité, récemment inventé par le Dr. James Clark, dans le but de grandement diminuer le frottement de l'échappement de dégagement.

Pour dessin et description entière de cette belle et ingénieuse invention, Voir la brochure d'Exposition de M. F. DENT, 1867.

23. HORLOGE D'OBSERVATOIRE, OU RÉGULATEUR, munie de l'échappement à repos et du pendule à mercure de Graham avec boîte d'acajou.

24. HORLOGE DE CONSOLE sonnant les heures et les quarts sur ressorts-timbres.

Elle a un pendule à mercure à demi-secondes, et échappement de gravité.

25. UNE HORLOGE DE SALON OU DE BIBLIOTHÈQUE, munie de l'échappement de chronomètre, et avec le 'staple-balance' de DENT, compensé et ajusté pour les variations extrêmes de température. Cette horloge sonne les heures sur huit cloches, a un calendrier perpétuel de la construction la plus parfaite, montrant les années bissextiles, les phases de la lune, et l'équation du temps. Dans une boîte en bronze doré, d'un beau fini et glace. Ce calendrier perpétuel est une invention française.

26. UNE HORLOGE DE CONSOLE, boîte en ébène, sonnant des carillons sur ressorts-timbres avec échappement à pierres fines et cadran en argent.

27, 28, 29, 30 et 31. CHOIX DE CHRONOMÈRES ET HORLOGES À LEVIER pour bibliothèques et salons, en bronze et bronze doré.

Quelques pendules de luxe.

Juror and Reporter at the Great Exhibition of 1862.

Awarded the Gold Medal of Honour at the Paris Exhibition of 1855; Gold Medal (Præmia Digno) from the Emperor of Russia, 1860.

A obtenu la Médaille d'Honneur en Or de l'Exposition de Paris de 1855; Médaille d'Or (Præmia Digno) de l'Empereur de Russie, 1860.

Erlangte die goldene Ehren-Medaille auf der Pariser Ausstellung von 1855; die goldene Medaille (Præmio Digno) von dem Kaiser von Russland, 1860.

Aggiudicatario della Medaglia Aurea d'Onore dell'Esposizione di Parigi del 1855; Medaglia Aurea (Præmia Digno) dell'Imperatore di Russia, 1860.

MR. CHARLES FRODSHAM acts as Juror at the present Exhibition, and therefore will not be a candidate for honours.

HOLDSWORTH, SAMUEL, 54 Spencer-street, Clerkenwell, London.

Chronometer and Watch Jewel Manufacturer, and Chronometer and Duplex Pallet Maker.
Pierreries en Horlogerie.

International Exhibition, 1862, Honourable Mention; International Exhibition of Dublin, 1865, Prize Medal; City of London Industrial Exhibition, 1866, Prize Medal.

S. H. begs to call the attention of the trade to his extensive stock of every variety of chronometer and watch jewels, set and unset, chronometer and duplex pallets, duplex rollers, and ruby pins, diamonds, set and unset, and chronometer and watch jewel screws. S. H. has a case of assorted watch jewels for exportation, in order to meet a want long felt by watchmakers living at a distance from the place of manufacture, whereby they may have a regular assorted number of jewels in size of hole and brass. The possession of such a case, it must at once be apparent, would prove of great value to every watchmaker, as a saving of much time and expense.

N.B.—Jewel-holes for drawing gold and other varieties of wire down to filigree work. Marine and pocket compass caps, and points for regulator and ordinary compasses; diamond-boart for lapidaries, seal engravers, and china drillers, and diamond powder.

Precious stones, viz. diamonds, rubies, sapphires, chrysolites, garnets, aquamarines, bought and sold. Price list on application.

S. H. is prepared to enter into contract with watchmakers and merchants.

S. H. désire appeler l'attention des fabricants d'horlogerie à ses marchandises vastes de tous genres; levées de chronomètre duplex, rouleaux duplex, levées rondes, ovales et triangulaires, contre-pivots et diamants, pleins et montés en acier, pour montres. S. H. a une caisse de pierres pour l'exportation à fournir au besoin aux Messieurs les horlogers à quelque distance que soit le fabricant, par lequel un nombre de pierres assorties de toutes grandeurs et de tous genres. La possession de cette caisse est bien en vue, on peut l'apercevoir à l'instant, pour prouver sa grande valeur à tous les horlogers, et leur sauver beaucoup de temps et d'argent.

N.B.—Filières en saphir pour tirer le fil d'or, et tout autre genre de fils à ouvrage fil. Pierre pour boussoles de marine, pointes en rubis pour régulation et compas ordinaires. Diamant boart pour les lapidaire et les graveurs de cachets, les perceur de porcelaine et poudre de diamant.

Pierres précieux, viz. diamants, rubis, saphirs, chrysolithes, grenats, aigue-marins, acheté et vendu.

S. H. a des cartes de prix de ces productions, et il est préparé à entrer en contrat avec tout les marchands d'horlogerie.

KULLBERG, V., 12 Cloudesley-terrace, Liverpool-road, Islington, London.

By Appointment to the Right Honourable the Board of Admiralty.

Manufacturer of Chronometers and Watches, wholesale and for export.

Fabricant de Chronomètres et Montres, en gros et pour l'exportation.

Obtained, for Chronometers with KULLBERG'S Improved Balances, the two First Honorary Prizes of the Admiralty on the competitive trial at the Royal Observatory, Greenwich, in 1862; again, the Second Honorary Prize in 1863; and again the First Honorary Prize in 1864, out of 187 competing instruments on trial, most of them by makers of the highest reputation.

KULLBERG'S productions also obtained the Silver Medal of the Horological Exhibition, Besançon, in 1860; Diplôme d'Honneur, Paris, in 1861; the Medal of the International Exhibition, London, 1862; and the Auld and Reid Prize, with the Silver Medal of the Royal Scottish Society of Arts, Edinburgh, Session 1863-64.

V. KULLBERG is the inventor of improved compensation balances for equalising the rates of chronometers in various temperatures. These balances have the important property of compensating for the varying tension of the pendulum spring, without separate and delicate auxiliary adjustments, a feat considered almost impossible to accomplish only a few years ago; and for the first time since the discovery of the chronometer even gaining in extremes of temperature can be produced at pleasure simply by placing the compensating weights in more or less effective positions on the laminæ of the balance.

V. KULLBERG has a modified construction of this balance for the comparatively confined space of pocket timekeepers.

Rust being one of the most prevailing causes of irregularity of rate and rapid decay of marine chronometers, V. KULLBERG preserves his springs with a suitable lacker.

V. KULLBERG is also inventor of an improved keyless mechanism for fusee watches. This mechanism, besides being the simplest of its kind, has the additional property, 'without extra work,' of locking out of action in shutting the case, thus making it as safe as the going barrel, whilst it possesses all the time-keeping properties of the fusee watch.

Pocket chronometers, chronometrically adjusted lever and duplex watches, independent and split seconds watches, repeaters, &c., of the finest description, either keyless or ordinary.

The high reputation and steady increase in the demand for V. KULLBERG'S productions is a sure and practical proof of the excellence of his works.

A obtenu pour Chronomètres munis de ses Balanciers perfectionnés les deux Premiers Prix Honoraires de l'Amirauté au Concours de l'Observatoire Royal à Greenwich, en 1862; puis le Second Prix Honoraire en 1863; et de nouveau le Premier Prix Honoraire en 1864, sur 187 instruments qui figuraient au Concours, et qui la plupart sortaient des ateliers de fabricants de la plus haute réputation.

Les produits de KULLBERG ont aussi obtenu la Médaille d'Argent à l'Exposition Horologique de Besançon, en 1860; un Diplôme d'Honneur à Paris, en 1861; la Médaille de l'Exposition Internationale, Londres, 1862; et le Prix de Auld et Reid, avec la Médaille d'Argent de la Société Royale Ecossaise des Arts, Edimbourg, Session de 1863-64.

V. KULLBERG est l'inventeur des balanciers perfectionnés à compensation pour égaliser la marche des chronomètres dans les divers milieux de température. Ces balanciers jouissent de la propriété de compenser les tensions variables du ressort du pendule, sans addition de pièces auxiliaires séparées et délicates—tour de force qu'il était regardé, il y a seulement quelques années, comme impossible d'accomplir; et, pour la première fois depuis l'invention du chronomètre, on peut gagner sur les extrêmes de température à volonté en plaçant les poids de compensation dans des positions plus ou moins efficaces sur les lamelles du balancier.

V. KULLBERG est l'inventeur d'une modification de ce même balancier afin de l'adapter à l'espace comparativement restreint qu'il peut occuper dans les chronomètres de poche.

La rouille étant une des causes les plus dominantes de l'irrégularité de marche et de la détérioration rapide des chronomètres marins, V. KULLBERG en garantit ses ressorts avec un vernis composé de façon à remplir ce but.

V. KULLBERG est aussi l'inventeur d'un mécanisme perfectionné, sans clef, pour montres à fusée. Ce mécanisme, le plus simple de son espèce, jouit en outre de la propriété, 'sans pièce additionnelle,' de supprimer l'action du remontoir en fermant la boîte, et par suite de lui donner la sûreté du barillet tournant, en même temps qu'il possède toutes les qualités de précision de la montre à fusée.

Chronomètres de poche, montres à ancre et duplex ajustées chronométriquement, montres à secondes doubles et indépendantes, montres à répétition, etc., du plus beau genre avec ou sans clefs.

La haute réputation et l'accroissement rapide et soutenu dans la demande des produits de V. KULLBERG, sont un sûr garant et une preuve pratique de l'excellence de tous les articles sortant de ses ateliers.

CLASS XXVI.

KENT, G. B., & CO., 11 *Great Marlborough-street, London, w.*—*Established 1777.*

Brush Manufacturers.

G. B. K. & Co. draw the attention of those who are sellers of brushes of high quality to the goods now in the Paris Exhibition; all of which were made on their premises.

They will forward an illustrated priced catalogue of their manufactures to those who enclose a card with their address and trade.

They are represented in Paris by M. MARTINA, No. 25 Rue d'Hauteville, by whom orders are received.

G. B. KENT & Co.'s painting brushes, hair brushes and tooth brushes have a high reputation.

G. B. K. ET CIE. invitent l'attention de ceux qui vendent des brosses de haute qualité sur leurs spécimens de marchandises maintenant à l'Exposition de Paris, tous sortant de leurs ateliers.

Ils enverront un catalogue illustré avec prix-courants de leurs produits aux personnes qui leur enverront leur carte, avec leur adresse et indication de leur industrie.

Leur représentant à Paris est M. MARTINA, No. 25 Rue d'Hauteville, qui reçoit les commandes.

Les brosses à peindre, brosses à cheveux et brosses à dents de G. B. KENT ET CIE., jouissent de la plus haute réputation.

G. B. K. & Co. erlauben sich, die Aufmerksamkeit aller derer, welche Händler in Pinseln und Bürsten von der besten Qualität sind, auf die auf der Pariser Ausstellung jetzt ausgestellten Waaren zu richten; dieselben wurden alle in ihren eigenen Werkstätten gemacht.

Sie werden einen illustrierten Preis-Catalog ihrer Fabricate allen denen zusenden, welche ihnen ihre Karte mit ihrer Geschäftsadresse zuschicken.

Sie sind repräsentirt in Paris durch Herrn MARTINA, No. 25 Rue d'Hauteville, von welchem Bestellungen angenommen werden.

G. B. KENT & Co.'s Maler- und Lackirer-Pinsel, Haarbürsten und Zahnbürsten geniessen eines hohen Rufes.

G. B. K. E CIA. invitano l'attenzione dei venditori di spazzole di qualità superiori agli oggetti che tengono nell'Esposizione di Parigi, i quali tutti furono fatti nel loro stabilimento.

Manderanno un catalogo illustrato e coi prezzi a chiunque accluderà la sua carta d'indirizzo e negozio.

Sono rappresentati a Parigi dal Signore MARTINA, No. 25 Rue d'Hauteville che riceverà gli ordini.

I pennelli da pittori, le spazzole da capelli e da denti di G. B. KENT, E. CIA. godono di una grande riputazione.

GROUP IV.

CLASS XXVII.

EVANS, WALTER, & CO., *Boar's Head Cotton Manufactory, Derby, England.**Established A.D. 1783.*

Trade Mark.

Marque de Fabrique.

Fabrik-Stempel.

Marca commerciale.

Obtained the London International Prize Medal of 1862 for 'very strong and most superior thread;' also the Dublin International Prize Medal of 1865 for 'excellent sewing and knitting cottons, and cotton for sewing machines.'

Manufacture the following:—

Two, three, four, and six cord sewings in skeins and in balls.

Embroidering, knitting, mending, cotton cord and small cord.

Superior six-cord crochet cotton on spools and in skeins, for sewing, knitting, tatting, and crochet.

Superior six-cord sewing on spools, soft finish, for sewing machines.

Patent glaze thread in white, black, and colours, on spools and cards.

Two and three cord sewing on spools, soft finish.

Ont obtenu la Médaille Internationale de Londres en 1862, pour leur 'fil très-fort et de qualité très-supérieure,' ainsi que la Médaille Internationale de Dublin, en 1865, pour leurs 'excellents cotons à coudre et à tricoter, et cotons pour machines à coudre.'

Et fabriquent les articles qui suivent:—

Cotons à coudre à deux, trois, quatre et six brins en écheveaux et pelotes.

Cordonnet, gros et fin, à broder, à tricoter, à raccommoder.

Coton à crochet, qualité supérieure, à six brins, sur bobines et en écheveaux pour coudre, faufiler, tricoter, et pour le crochet.

Coton à six brins, qualité supérieure, sur bobines, sans apprêt, pour machines à coudre.

Fil d'Écosse glacé, breveté, blanc, noir et de couleur, sur bobines et cartes.

Coton à coudre à deux et trois brins, sur bobines, sans apprêt.

Erlangten die Londoner internationale Preis-Medaille von 1862 für 'sehr dauerhaften und vorzüglichen Faden;' ebenso die Dubliner internationale Preis-Medaille von 1865 für 'ausgezeichneten Zwirn und Baumwolle, und Zwirn für Nähmaschinen.'

Verfertigen die folgenden Waaren:—

Zwei-, drei-, vier- und sechsdrähtigen Zwirn in Strähnen und in Knäueln.

Starke und feine Baumwolle zum Sticken, Stricken und Ausbessern.

Beste sechsdrähtige Häkel-Baumwolle, auf Spulen und in Strähnen, zum Nähen, Stricken, Spitzenhäkeln und dergleichen.

Besten sechsdrähtigen Zwirn auf Spulen, weicher Appretur, für Nähmaschinen.

Patentirten Glacé-Zwirn in Weiss, Schwarz und allen Farben, auf Spulen und Karten.

Zwei- und dreidrähtigen Zwirn weicher Appretur, auf Spulen.

Ottennero la Medaglia dell'Esposizione Internazionale di Londra del 1862 per 'filo fortissimo ed eccellente,' ed anche la Medaglia dell'Esposizione Internazionale di Dublino 1865, 'per cotone da cucito e da maglia, e cotone da macchina da cucire eccellenti.'

Fabbricano i seguenti:—

Cotone torto a due, tre, quattro, e sei capi da cucire, in matasse in gomitolli.

Cotone da ricamo, da maglia, da rammendo, cotone torto, grosso e fino.

Cotone superiore a sei capi da crochet in rocchetti e in matasse, per cucito, maglia, imbastitura, e crochet.

Cotone superiore da cucire a sei capi in rocchetti, di un finito molle, per macchine da uccire.

Filo lucido patentato in bianco, nero, e in colori in rocchetti e in cartelline.

Filo a due o tre capi in rocchetti di un finito molle.

CLASS XXX.

PLATT, JAMES, & CO., *Woollen Merchants*, 78 & 84 *St. Martin's Lane*, and 28 & 29 *Cranbourne Street*, London, w.c.

Scotch Tweeds—*Tweeds Ecossais*—Schottische Tweeds—*Tweeds Scozzesi*.

These tweeds, called 'Platt's Tweeds,' were the first tweeds made in Scotland for riding trousers, and were introduced by JAMES PLATT & Co., in 1865, in opposition to those made in the West of England.

Their advantages consist of greater strength, being unbreakable, newer colouring, and greater novelty of design, clearer in colour, and more perfect, being less streaky than other goods of the same character; they are as soft, and yet free from oil, so that there is no fear of oil stains showing when they are cleaned, a very great advantage over the old make. They will not shrink, and are lower in price than any other goods of the same class, being sold by the introducers to drapers and tailors for 10-yard lengths at the same price manufacturers charge the wholesale drapers and merchants.

Nearly 2,000 pieces, the largest stock in the world, of these riding-trowsers tweeds may be seen at their establishment.

Patterns sent free. 5 per cent. for cash.

Represented at Paris by MESSRS. W. S. KIRKLAND & Co., 27 Rue de Richelieu, where samples may be seen and prices ascertained.

Ces 'Tweeds,' dits 'Tweeds de Platt,' furent les premières étoffes de cette espèce fabriquées en Écosse pour pantalons de cheval, et furent présentées au public par JAMES PLATT et Cie. en 1865, en concurrence avec celles fabriquées dans l'ouest de l'Angleterre.

Leurs avantages consistent en ce qu'elles possèdent une plus grande force, étant indéchirables, offrent des couleurs plus nouvelles et des dessins plus nouveaux, sont de nuances plus nettes et plus parfaites, étant moins striées que les autres étoffes de cette espèce; elles sont en outre aussi moëlleuses qu'elles, quoique complètement dégraissées, de sorte qu'on n'a pas à craindre de voir apparaître des taches d'huile quand on les nettoye, grand avantage que n'offre pas le vieux système de fabrication. Ces 'Tweeds' ne se retirent point, et enfin sont d'un prix plus bas que toute autre étoffe de la même classe, MM. PLATT et Cie. les vendant aux drapiers et tailleurs, en longueurs de 10 yards—9,15 m.—aux mêmes prix que ceux faits par les fabricants aux drapiers et marchands en gros.

Près de 2,000 pièces—l'assortiment le plus considérable qui en existe au monde—de ces 'Tweeds' pour pantalons de cheval sont offertes à l'inspection du public.

Échantillons envoyés gratis. 5 pour cent au comptant.

Représentés à Paris par MM. W. S. KIRKLAND et Cie., 27 Rue de Richelieu, où l'on peut voir des échantillons et s'assurer des prix.

Diese Tweeds, 'Platt's Tweeds' genannt, waren die ersten Tweeds, welche in Schottland für Reithosenfabricirt wurden; sie wurden von JAMES PLATT & Co., in 1865, in Opposition zu denen, welche im Westen von England gemacht werden, eingeführt.

Ihre Vortheile bestehen in grösserer Dauerhaftigkeit, indem sie niemals zerreißen, neuerer Farbe und grösserer Neuigkeit im Dessin, welches klarer in Farbe und vollkommener ist; sie sind folglich nicht so streifig als andere Güter von derselben Beschreibung; sie sind ebenso weich, und dennoch frei von Oel, so dass keine Gefahr vorhanden ist, dass sich Oelflecke zeigen, wenn sie gereinigt werden, ein sehr grosser Vortheil, welchen sie über das alte Fabricat haben. Sie laufen nicht ein und sind niedriger im Preise als irgend andere Güter von derselben Klasse, da sie von den Einführern derselben an Tuchhändler und Herren-Kleidermacher für Längen von 10 Yards zu demselben Preise verkauft werden, welchen die Fabricanten den En-gros-Händlern stellen.

Ziemlich 2,000 Stücke, das grösste Lager in der Welt, von diesen Tweeds für Reithosen können in Augenschein genommen werden.

Proben portofrei gesandt. 5 Procent Discounto.

Representirt zu Paris durch die Herren W. S. KIRKLAND & Co., 27 Rue de Richelieu, wo Musterstücke gesehen und Preise erfahren werden können.

Questi Tweeds, detti 'Tweeds Platt,' furono i primi Tweeds fatti in Scozia per pantaloni da equitazione, e furono introdotti da JAMES PLATT e CIA. nel 1865 in opposizione a quelli fatti nell'ovest dell'Inghilterra.

I loro pregi consistono nella maggior robustezza, essendo impossibile romperli, maggior novità di colori e di disegni, più chiari e più perfetti di colore, essendo meno screziati che altri manufatti dello stesso carattere; sono ugualmente molli, eppure liberi dall'olio, così che non vi è pericolo di macchie d'olio quando si ripuliscono; grandissimo vantaggio sopra l'antica fabbricazione. Non ritirano, e sono di minor costo che qualunque altro manufatto della stessa classe, essendo venduti dagli introduttori ai negozianti in dettaglio ed ai sarti in lunghezze di 10 yarde allo stesso prezzo che i fabbricanti vendono ai negozianti all'ingrosso.

Due mila pezze circa possono mostrarne di questa roba da pantaloni da equitazione; fondo di negozio superiore ad ogni altro nel mondo.

Mandano campioni gratis. Sconto 5 per cento pel contante.

Rappresentati a Parigi dai Sgri. KIRKLAND e CIA., 27 Rue de Richelieu, dove si possono vedere campioni ed accertarsi dei prezzi.

SMALPAGE & SON, 41 and 43 Maddox-street, Bond-street, London, w.

Military and Court Tailors.
Tailleurs pour la Cour et l'Armée.
 Militair- und Hofkleidermacher.

Beaufort Stalking Coat (Registered)—*La Veste de Chasse Beaufort (enregistrée).*
 Beaufort-Jagdrock (registriert).

The above illustrates one of the most important inventions for sporting purposes which have lately appeared, and which from its usefulness and extreme novelty is worthy of special notice.

It has already received the patronage of the elite of our sporting gentlemen, his grace the Duke of Beaufort being its imprimatur.

It consists of a coat without sleeves, those appendages being attached to the waistcoat, the back of which being of the same material as the coat forms a perfect garment in itself.

By this method greater freedom of action is given to the arm in shooting, fishing, cricket, croquet, billiards, &c., than is attainable under the old system.

Cette veste est l'illustration d'une des inventions les plus importantes à l'usage du sport qui aient récemment paru, et est digne d'une attention spéciale en raison de son utilité et de son extrême nouveauté.

Elle a déjà reçu le patronage de l'élite de nos gentilshommes du sport, sa grâce le Duc de Beaufort en étant l'initiateur.

Elle consiste en une veste sans manches, ces appendices étaient attachés au gilet, dont le dos

est de la même étoffe que la veste, et qui forme ainsi un vêtement complet par lui-même.

Par cette méthode, une plus grande liberté d'action est donnée au bras pour la chasse, la pêche, le 'cricket,' le croquet, le billard, etc., qu'il n'est possible d'obtenir d'après l'ancien système.

Die obige Illustration erläutert eine der wichtigsten Erfindungen für die Zwecke der Jagd, welche kürzlich aufgekommen sind, und welche wegen ihrer Nützlichkeit und ausserordentlichen Neuheit besondere Beachtung verdient.

Sie erfreut sich bereits der Gönnerschaft der Élite unserer Jagdliebhaber; der Herzog von Beaufort ist der Patron derselben.

Sie besteht aus einem Rocke ohne Aermel; diese Anhängsel gehören zu der Weste, deren Rücken von demselben Material als der Rock ist und ein Kleidungsstück für sich selbst bildet.

Durch diese Methode ist dem Arme grössere Freiheit der Bewegung im Jagen, Fischen, Cricket-, Croquet- und Billardspielen gegeben als nach dem alten System möglich war.

CLASS XXXI.

HOLME, GEORGE, *Bath-street Mills, Derby.*

Elastic Fabrics for Boots and Shoes.

At this factory, in the year 1847, steam-power was first applied in the manufacture of elastic fabrics.

The goods made by this firm are especially suited for foreign markets, the india rubber being of the finest quality, and purposely prepared to resist the variations of climate.

The silk used is thrown and prepared from the raw state on the premises, as also the other materials, in order to secure to the customers every advantage, both in price and quality.

Price lists and patterns on application.

Correspondence in all the principal European languages.

Fabrique de Tissus Élastiques pour Chaussures.

C'est dans cette fabrique que dans l'année 1847 la vapeur fût appliquée pour la première fois dans la fabrication des tissus élastiques.

Les marchandises fabriquées par cette maison sont spécialement destinées aux marchés étrangers; les fils de gomme étant de la plus belle et de la plus pure qualité, et préparés expressément pour résister aux diverses variations de climat.

La soie est moulinée et préparée de l'état brut dans l'usine, ainsi que toutes les autres matières premières, afin d'assurer aux clients tous les avantages soit de prix ou de fabrication.

Prix-courants et échantillons sur demande.

Correspondance dans toutes les principales langues européennes.

LISTER & CO., *Wellington Mills, Halifax; Manningham Mills, near Bradford; and Low Mills, Addingham, near Leeds, England.*

Registered
Trade Mark.

Marque

Fabrikstempel.

Marca
di Fabbrica
registrato.

Proprietors of the 'LISTER' Patent Silk-Combing Machine; manufacturers of patent long-spun and short-spun silk yarns, viz. schappe, discharged and other damasks, cords, wefts, and yarns from silk waste of all descriptions. Sole makers of LISTER & Co.'s patent diamond silk twist for machine and hand sewings, remarkable for strength, evenness, and cleanness of thread.

LISTER & Co. do not adopt the usual practice of adding artificial weight to their silks when undergoing the process of dyeing, excepting for special orders, hence the length in proportion to the weight is considerably more than common in silk sewings of the same thickness, thus making the price materially cheaper to the consumer.

Propriétaires du 'LISTER Brevet' pour une peigneuse à soie. Fabricants de fils de soie en long et en court, savoir: schappe, damas de fantaisie, etc., cordonnets, trames et fils de déchet de soie de toute sorte. Seuls fabricants du 'patent diamond silk twist' (soie moulignée adamantine brevetée) à coudre, soit à la machine, soit à la main, lequel est remarquable pour sa force, ainsi qu'à cause de l'uniformité et de la propriété du fil.

LISTER & C^{ie}. n'adoptent pas la pratique usuelle d'ajouter à la soie du poids artificiel pendant la teinture, excepté quand on en demande spécialement, par conséquent la longueur de leurs 'patent diamond silk twists,' proportionnelle au poids, est considérablement plus que l'on ne donne ordinairement quand on achète d'autres soies à coudre de la même épaisseur; donc il est évident qu'ils offrent à la consommation beaucoup d'avantage à l'égard du prix.

Eigenthümer der patentirten 'LISTER'-Seiden Kammmaschine; Fabricanten von patentirten lang- und kurzgesponnenen Seidengarnen, nämlich: Schappe, Fantasie- und anderen Damasten, Cordonnets, Fransen, Einschlagfäden und Garnen von allen Gattungen Seidenabfall. Die einzigen Fabricanten von 'LISTER & Co.'s Patent Diamond Silk Twist' für Maschinen- und Handnaht, bemerkenswerth wegen seiner Stärke, Gleichheit und Reinheit des Fadens.

LISTER & Co. folgen nicht dem alltäglichen Gebrauch, der Seide im Färben künstliches Gewicht zu geben, ausgenommen, wenn es besonders verlangt wird. Daher ist bedeutend mehr Länge im Verhältniss zum Gewicht vorhanden, als von Nähseide von derselben Stärke, welche von andern Häusern geliefert wird; sie bietet also für den Consument in Betreff des Preises ungewöhnlichen Vortheil.

Proprietari della Macchina patentata di 'LISTER' per pettinare la seta; manufattori di filo scempio serico filuto lungo, e filato corto, cioè sciappe, damaschi di fantasia ed altri, cordonati, trame e fili scempi di filaticcio di ogni genere. Soli fabbricanti della seta torta diamante patentata di LISTER E CIA. per cucire a macchina ed a mano, notevole per forza, unitezza, e nettezza di filo.

LISTER E CIA. non adottano l'uso solito di aggiungere peso artificiale alle loro sete, sottomettendole al processo della tintura, eccetto per ordini speciali, quindi la lunghezza in proporzione al peso è considerabilmente maggiore che nelle comuni sete da cucire della stessa grossezza, rendendone così il prezzo considerabilmente minore pel consumatore.

CLASS XXXV.

HALL, J. SPARKES, 308 Regent-street, London, Bootmaker to the Queen and the Royal Family.

Inventor, Patentee, or Manufacturer of the following useful articles :—

No. 1. The patent elastic boots for ladies, gentlemen, and children.

Diagrams, sketches and prices of every kind in 'Ancient and Modern Boots and Shoes.' Price 4d.

2. The Pannus Corium elastic boots, very easy and durable. Ladies', from 10s. 6d. Gentlemen's, from 21s.

The material very much improved, extremely soft and pliable for warm climates, 27 inches wide, wholesale at 5s. per yard. Patterns by post for two postage stamps.

3. The silk stocking-net elastic boots, easy and very durable. Price 21s.

4. Boots and shoes for the poor, price list for 2d. Women's, 2s. 6d.; Children's, 2s. per pair.

5. Goloshes and clogs for ladies; of India rubber and leather, and gutta percha, requiring no fastening, straps, or buckles. Price 4s. 6d. to 10s. 6d.

Note.—'Shoes began to be made of the cut sheet rubber I think as early as 1825 or 1828, but not in considerable quantities until, 1828 and 1830, Mr. Sparkes Hall took the lead, and maintained it. He has told me that he began in 1830, and made 12 pairs a day with his own hands.'—Vide '*India-Rubber Manufacture in England*,' by Thomas Hancock. London: Longman, Brown, & Green, 1857.

6. The shoemaker's upright bench. Price 25s. Drawings and pamphlet, 2d.

7. The patent sanitary ventilator for dwellings. Price 20s. Pamphlet, 2d.

8. The mechanical boot stretcher for ladies and gentlemen ('where the shoe pinches'). Price 25s. Pamphlet 4d.

9. The 'cottager's cooking stove' presented to the tenants and workmen of the inventor as a suggestion for increased comfort convenience, and economy.

It is an open fire place, has a cheerful wood, coal, or peat fire, and will at the same time bake, roast, boil, and fry, at the cost of a few pence, and is complete with flues, and requires no skill in fixing. Price One Guinea.

No. 1. Les brodequins élastiques, brevetés, pour dames, messieurs et enfants.

Diagrammes, croquis et prix de toutes les sortes de 'Chaussures Anciennes et Modernes.' Prix, 40 c.

2. Les bottines élastiques en Pannus Corium, très-douces au pied et très-durables. Pour dames, depuis 13 frs. 15 c. Pour messieurs, depuis 26 frs. 25 c.

Même matière considérablement perfectionnée, extrêmement douce et pliable, pour climats chauds, 27 pouces—68,58 c.—de large, en gros à 6 frs. 25 c. le yard—91 c. Échantillons envoyés par la poste moyennant deux timbres-poste.

3. Les brodequins élastiques à bas de soie, très-doux au pied et très-durables. Prix, 26 frs. 25 c.

4. Bottes et souliers pour les pauvres, prix-courants pour 2d.—20 c. Pour femmes, 3 frs. 10 c.; pour enfants, 2 frs. 50 c. la paire.

5. Galoches et socques pour dames; en caoutchouc et en cuir, ainsi qu'en gutta-percha, ne demandant nulle attache, courroies ou boucles. Prix, 5 frs. 65 c. à 13 frs. 15 c.

Notice.—'On commença, si je ne me trompe, depuis aussi longtemps qu'en 1825 ou 1828 à faire des souliers avec le caoutchouc en feuilles coupées, mais en quantités peu considérables, jusqu'à ce que, en 1828 et 1830, M. SPARKES HALL ait pris dans ce genre de fabrication le premier rang, où il a su se maintenir. Il commença, m'a-t-il dit, en 1830, et en faisait 12 paires par jour de ses propres mains.'—Voir '*Dela Manufacture du Caoutchouc en Angleterre*,' par Thomas Hancock. Londres: Longman, Brown, & Green, 1857.

6. Le banc droit du cordonnier. Prix, 31 frs. 25 c. Dessins et notice, 20 c.

7. Le ventilateur sanitaire, breveté, pour habitations. Prix, 25 frs. Notice, 20 c.

8. L' étendeur mécanique à bottines, pour dames et messieurs (agissant où la chaussure meurtrit). Prix, 31 frs. 25 c. Notice, 40 c.

9. Le 'fourneau du paysan,' présenté aux locataires et ouvriers de l'inventeur comme suggestion d'augmentation de confort, de commodité et d'économie.

Ce fourneau consiste en un foyer ouvert, offrant un joyeux feu de bois, de houille ou de tourbe, et sert à la fois de four, et à faire rôti, bouillir et frire, moyennant une dépense de seulement quelques pences; complet avec tuyaux, et ne demandant pas la moindre habileté pour le monter. Prix, 26 frs. 25 c.

CLASS XXXVII.

REILLY, E. M., & CO., 502 *New Oxford-street, London, w.c.**Branch—315 Oxford-street, London, w.*

Gun Manufacturers.

Improved breech-loading guns for pin cartridges, on their well-known 'Double Grip' system, combining simplicity and durability; likewise several well-made 'Spring Actions,' which renders the gun self-closing.

Fusil de chasse à bascule de nos fabriques, canons en damas turcs, batteries et platines de première qualité. Ce fusil n'a pas l'inconvénient de l'ancien système à bascule, il s'ouvre et se ferme avec un ressort ce qui en facilite l'action

Patent 'Central Fire' direct action breech-loading guns. The superiority of this system is now well attested by its all but exclusive use amongst the most eminent English sportsmen of the present day. Its shooting powers, both for strength and closeness, are unrivalled. The facility for loading and extraction of the exploded cartridge, combined with cleanliness, makes this gun superior to any hitherto produced.

Patent revolvers of the latest and most approved systems, made throughout by machinery, thus producing exactitude and finish yet unattainable by hand-labour. By this means the cost of production is reduced considerably.

Fusil de chasse à bascule, système perfectionné 'Feu Central.' La maison lui a dédié une mention et breveté; la cartouche dont la capsule se trouve au centre communique le feu instantanément n'a pas l'inconvénient de l'ancien système Lefauchaux; elle peut se placer aussi facilement dans l'obscurité qu'à la lumière et sans perdre un précieux moment. Enfin, ce système est généralement adopté par nos adroits chasseurs et sportsmen d'Angleterre.

Pistolets revolvers de tous les plus nouveaux systèmes pour la défense, l'amusement au salon, et à la campagne, etc. etc. Ces armes sont 'entièrement' fabriquées par machines, et les rend plus précis et permet d'en réduire considérablement le prix.

Ardoises pour toitures (des Galles), de la nuance particulière si recherchée par les architectes.

Cette ardoise est considérée comme une des plus durables qui se trouvent dans le marché ; jamais il ne s'y produit de végétation, et elle est parfaitement non-absorbante.

Fournies directement des carrières, et expédiées à toute station de chemins de fer ou port de mer. Adresser les commandes à—

CHAS. GANE et C^{IE}., marchands de bois de construction, sapin, lattes et ardoises, Baltic Wharf, Wisbeach.

Ardoises bleues pour toitures de Portmadoc.

Ardoises de Bangor, expédiées directement des carrières.

Ardoises pour faitages.

Tuiles bleues pour faitage (du Staffordshire), unies, cannelées et ornementées ; expédiées directement des fabriques.

Carreaux bleues et rouges pour carrelage.

Tuyaux de drainage, vernissés, à socle.

Faïtières de cheminées en terre-cuite, etc.

Cargaisons de bois—débarquées à loyer.

Prix-courants et détails par la poste sur demande.

GILPIN, WILLIAM, SEN., & CO., *Wedges Mills and Churchbridge Works, Cannock, Staffordshire, England.*

A Prize Medal was awarded them at the International Exhibition of 1862, for 'Edge Tools of Good Quality.'

W. G., SEN., & Co. exhibit a large assortment of their Patent boring bits, adapted for machinery, and brace bits and augers, for hand-labour, and a general variety of tools for carpenters', shipwrights', platelayers', masons', miners', and smiths' use. Agricultural and horticultural tools, &c.

This firm are also makers of anvils, vices, cart arms and boxes, for English, foreign, and colonial consumption; steel of the highest qualities, and iron of various descriptions.

Une Médaille leur a été décernée à l'Exposition Internationale de 1862 pour 'Outils à Tranchant de Bonne Qualité.'

W. G., SEN., ET CIE. exposent un large assortiment de leurs mèches à forer, brevetées, pour adaptation aux machines, de vilebrequins et tarières pour travail à la main, et une variété générale d'outils à l'usage des charpentiers, charpentiers en navires, poseurs, maçons, mineurs et forgerons. Outils d'agriculture et d'horticulture.

Cette maison fabrique aussi enclumes, étaux, rayons et moyeux de charrettes, pour consommation intérieure, extérieure et coloniale; acier de la première qualité, et fer de toutes sortes.

Eine Preismedaille für 'Schneidewerkzeuge guter Qualität' wurde ihnen in der Ausstellung im Jahre 1862 zuerkannt.

W. G., SEN., & Co. stellen eine grosse Auswahl von patentirten Bohreisen für Maschinerie, Spanneisen und Zimmermannsbohrer, Werkzeuge für selbe, für Schiffbauer, Steinsetzer, Maurer, Bergleute und Schmiede-, Acker- und Gartengeräthe aus.

Diese Firma macht auch Ambosse, Schraubstöcke, Karrenarme und Karten, für Englischen, fremden und colonialen Gebrauch; Stahl von der allerbesten Qualität, sowie Eisen verschiedener Art.

La Medaglia fu loro aggiudicata all'Esposizione Internazionale del 1862 per 'Strumenti da Taglio di Buona Qualità.'

W. G., SEN., E CIA., espongono un grande assortimento di punte da trapano, patentate, adattate per meccanismi, e punte da trivelle e succhielli per lavoro a mano, ed una varietà generale di arnesi da falegnami, costruttori di navi, costruttori di ferrovie, muratori, minatori, e fabbri. Arnesi per agricoltura e orticoltura, ecc.

Questa ditta fabbrica anche incudini, morse, barre, e incassature di mozzì da carro, ad uso nostrale, estero e delle colonie; acciaio delle migliori qualità, e ferro di varie specie.

HART & SON, 53 to 58 *Wyck-street, Strand, w.c., and 70, 71, 72 Brook-street, Hanover-square, w., London.*

Manufacturers of Ecclesiastical and Domestic Art Metal-work
and Engravers of Monumental Brasses.

Only some of the smaller works exhibited by HART & SON are engraved in the above group; these are principally for domestic use, and have been selected to show the attention paid by this firm to every-day requirements. We call attention to the Library Clock as a happy example of the blended use of oak and brass, the effect of the metal being enhanced by a judicious employment of colour.

The gilt Flagons and Basins are very beautiful productions, exhibiting much elegance in the design, and great delicacy in the engraving of the ornament and figures. The subjects on the smaller dish illustrate Tennyson's poem, 'The Mermaid.' These vessels are designed by Mr. W. BURGESS.

The large jewelled chalice and the richly enamelled casket are important works; both will repay minute inspection.

The Monumental Brass is intended for a soldier's tomb, and represents St. Michael overcoming Satan; at the angles of the border the cardinal virtues are engraved. The design

is the joint production of Messrs. JOHN BENTLEY and N. WESTLAKE. It quite realises, both in design and execution, the style and artistic feeling of the best works of the Middle Ages.

Of the brass Eagle Lecterns, the larger is remarkable for much originality of design, the height is divided into three stages, and terminates in an allegory—the Gospel vanquishing Infidelity—represented by an eagle trampling on a dragon; the eagle supports the book-rest, which is ornamented in black incise, the front having a cross surrounded by the evangelistic emblems, and the back a foliated ornamentation.

The Gospel Candlesticks are designed by Mr. W. BUTTERFIELD, and well merit attention for the beauty of their foliated capitals, and the mellowness of the illumination.

In wrought-iron the gates designed by Mr. J. P. SEDDON, the door-fittings, the fire-dogs, and especially the magnificent Candle Standard, well sustain the high reputation of this house.

JOHNSON, RICHARD, & NEPHEW, *Manchester.*

Iron Manufacturers, Wire Drawers and Galvanisers, Telegraph and Fencing Contractors.
Forges, Tréfileries, Ateliers de Galvanisation, Matériel pour Télégraphes et Enclos à Fil de Fer.
Eisenhütten, Drahtziehereien, Verzinkungsöfen; Telegraphen- und Verzäunungs-Materialien.

Telegraph wire rolled and drawn in pieces weighing 80lbs. and upwards, without any weld or joint whatever; and tested by machine, which ensures perfect and uniform quality throughout the whole length.

Telegraph insulators of every description, and guaranteed as to both strength and insulating capacity.

Patent steel and iron wire of the finest quality for ropes. Cast steel and iron wire of all kinds for general purposes.

Fil de fer télégraphique laminé et tréfilé en pièces de 35 à 55 kilogrammes, sans soudure ou ligature quelconque; éprouvé par un appareil à tension qui garantit une qualité parfaite et uniforme de chaque pièce dans toute sa longueur.

Isolateurs télégraphiques de toute espèce et

garantis sous le rapport de solidité et capacité isolante.

Fil d'acier et fil de fer de la plus fine qualité pour câbles. Fil d'acier fondu, et fil de fer à l'usage général.

Telegraphendraht in Rollen von 80 Pfund und darüber, ohne irgend welches Gelöthe oder sonstige Verbindung, und mittelst einer Maschine geprüft, welche die vollkommene und gleichmässige Qualität jedes einzelnen Stückes in seiner ganzen Länge verbürgt.

Isolatoren aller Art, garantirt bezüglich Stärke und Isolirungsfähigkeit.

Patent-Stahl- und Eisendraht von feinsten Qualität für Seile. Gussstahl- und Eisendraht aller Art zu allgemeinem Gebrauche.

THE PATENT PLUMBAGO CRUCIBLE COMPANY,

SOLE MANUFACTURERS UNDER MORGAN'S PATENT,

BATTERSEA WORKS, LONDON, S.W.

These Crucibles (MORGAN'S PATENT) were the only ones to which Prize Medals were awarded in London, 1862; Dublin, 1865; New Zealand, 1865; and Oporto, 1865.

They have been in use for many years in the English, Colonial, French, and other foreign mints; the English, French, and other arsenals; and have been adopted by most of the large engineers, founders, and refiners at home and abroad.

The capabilities which have now for more than twelve years distinguished these crucibles are the following :—

Their quality is uniform. They withstand the greatest heat without danger. Their average durability for *gold, silver, copper*, and other ordinary metals is forty to fifty pourings, in some cases reaching one hundred. They never crack, and heat more rapidly than any other kind. One annealing only is required. Change of temperature has no effect. They can when hot from the furnace be dipped in cold water with safety. The saving of labour and metal is very great. In *steel melting* the saving of fuel has been demonstrated to amount to a ton and a half to every ton of

steel fused. For *zinc* they last longer than iron pots, and save the great loss which arises from mixture with iron. Those for *malleable cast-iron* show an average working of seven days, doing each day nearly double the work of any other crucible.

As these crucibles last much longer than any others, it follows that the saving of metal must be great, because to each worn crucible a quantity of metal adheres. In fact, comparing these with other crucibles, the *saving of metal and fuel* alone is more than equivalent to *their cost*.

A are made in sizes varying from two ounces to any required capacity, and are marked by the quantity of kilograms they will contain—thus, No. 100 will contain 100 kilograms.

B differ in shape, but correspond in all other respects with *A*, and are similarly marked.

C are marked in English pounds—thus, a crucible marked 60 will contain 60 lbs.

D are made expressly for steel, in various sizes.

For Illustrations and Trade Mark, see next page.

PATENT PLUMBAGO CRUCIBLE COMPANY,

SOLE MANUFACTURERS UNDER MORGAN'S PATENT,

BATTERSEA WORKS, LONDON, S.W.

Crucibles made to any shape and size to order.

TRADE

MARK.

Some unprincipled manufacturers having made such close imitations of our trade-mark as cannot fail to deceive the public, we have deemed it advisable to alter our mark, as here shown. It will be observed that the alteration consists in the OMISSION of the words—'DEPÔTS AT PARIS AND ROTTERDAM,' and the ADDITION of the words—'MORGAN'S PATENT.'

In all future orders, please specify 'MORGAN'S PATENT,' and address to *Battersea Works, London, S.W.*

SOPWITH, THOMAS, F.R.S., F.G.S., *Mining Engineer, Member of the Geological Society of France.*

Lead Ores and Lead.
Minerais de Plomb et Plomb.
 Bleierze und Blei.
Minerale di Piombo e Piombo.

Obtained Prize Medals at the International Exhibitions, London, 1851; Paris, 1855; and London, 1862.

These ores and illustrations of lead mining are from the well-known 'W. B.' lead mines of Mr. Beaumont, in the counties of Northumberland and Durham, in the north of England. The position of the principal mines, and the geological structure of the districts in which they are situated (extending over upwards of 200 square miles), are shown by plans and sections. The various processes of dressing and smelting the ores are shown by specimens in each stage of the respective processes, and a detailed account of the mines, and of their produce, may be seen in the official catalogue of the London International Exhibition of 1851. These mines produce the 'W. B.' or 'Blackett' lead, which is well known for superior quality in the markets of Europe and America.

(*Exhibited by T. SOPWITH, Chief Agent of the Mines, 'W. B.' Lead Office, Newcastle-on-Tyne, and 103 Victoria-street, Westminster, s.w.*)

Médailles aux Expositions Internationales de Londres, en 1851; Paris, en 1855; et Londres, en 1862.

Ces minerais et illustrations de l'industrie minière du plomb proviennent des mines bien connues, dites 'W. B.', de M. Beaumont, dans les comtés de Northumberland et de Durham, au nord de l'Angleterre. Des plans et sections montrent la situation des principales mines, et la structure géologique des districts (compré-
 nant plus de 200 milles carrés) dans lesquels elles se trouvent. Les divers procédés de préparation et de fusion des minerais sont illustrés par des spécimens pris dans chaque phase des procédés respectifs, et une description détaillée de ces mines et de leurs produits se trouve dans le catalogue officiel de l'Exposition Internationale de Londres de 1861. Ce sont ces mines qui donnent le plomb dit 'W. B.' ou 'Plomb de Blackett,' si renommé pour la qualité supérieure sur les marchés d'Europe et d'Amérique.

Erlangte Preis-Medaillen auf den internationalen Industrie-Ausstellungen in London, 1851; Paris, 1855; und London, 1862.

Diese Bleierze und Illustrationen des Bleibergbaues sind von den wohlbekannten 'W. B.' Bleibergwerken des Herrn Beaumont, in den Grafschaften Northumberland und Durham, in dem Norden von England. Die Lage der hauptsächlichsten Gruben und die geologische Structur des Districts, in welchem dieselben liegen (und welcher einen Flächenraum von über zwei hundert (Englischen) Quadratmeilen umfasst), sind durch Pläne und Durchschnitte angezeigt. Die verschiedenen Prozesse der Aufbereitung und des Schmelzens der Erze sind durch Proben von jeder Stufe der respectiven Processe dargestellt, und ein genauer Bericht über die Gruben und deren Producte kann in dem officiellen Cataloge der Londoner internationalen Industrie-Ausstellung von 1851 eingesehen werden. Diese Gruben produciren das 'W. B.' oder 'Blackett'-Blei, welches durch seine ausgezeichnete Qualität so wohlbekannt in den Märkten von Europa und Amerika ist.

Ottenne la Medaglia all' Esposizioni Internazionali di Londra del 1851; di Parigi, 1855; e di Londra, 1862.

Questo minerale di piombo ed illustrazioni di lavorazioni di miniere di piombo sono tratti dalle ben conosciute miniere di piombo 'W. B.' del Signor Beaumont nelle contee di Northumberland e Durham nel norte dell' Inghilterra. La posizione delle principali miniere, e la struttura geologica dei distretti in cui sono situate (in un' estensione di circa 200 miglia quadrate), sono dimostrate con piante e profili. I vari processi per preparare e fondere il minerale sono dimostrati da saggi di ciascuno grado dei rispettivi processi; ed una relazione dettagliata delle miniere, e dei loro prodotti, si può vedere nei cataloghi ufficiali dell' Esposizione Internazionale di Londra, 1851. Queste miniere producono il 'W. B.' o piombo 'Blackett,' che è ben conosciuto per qualità superiore ne mercati di Europa ed America.

TURTON, THOMAS, & SONS, *Sheaf and Spring Works*, SHEFFIELD,

MANUFACTURERS OF

LOCOMOTIVE ENGINE AND RAILWAY CARRIAGE SPRINGS;

BUFFERS WITH CONICAL AND VOLUTE SPRINGS;

VICKERMAN & CO., *Kilgetty Anthracite Iron Works and Collieries; also Bonville's Court Anthracite Collieries, Saundersfoot, Tenby, Pembrokeshire, South Wales, England.*

The coal from these collieries is considered the purest anthracite in the world, and is extensively used throughout Great Britain and Ireland for making the finest qualities of pale malt, and for drying corn, hops, &c., for which purpose it holds the highest position, owing to its extreme purity and durability. The following is an analysis of the coal:—

{ Carbon . 94.18	{ Sulphur 0.15	} = 100
{ Hydrogen 2.72	{ Oxygen 1.82	
{ Nitrogen 0.15	{ Ash 0.98	

It has also been successfully used for *steam purposes* in *Her Majesty's Yacht*, the 'Great Britain,' the 'Royal Charter,' and other steamers. It is perfectly *free from smoke*, very hard, resisting the effects of attrition, of *great specific gravity* (1.420), occupying little space (32.75 cubic feet for 1 ton), and of *high evaporative power* (10.55 lbs. water to 1 lb. coal).

The small or 'culm,' and is largely used for lime-burning in England, Wales, Ireland, and France.

The pig iron made at these works is of the finest description, being made from the native ores of the district, with an admixture of the best hematites, and smelted with the noted *Kilgetty anthracite coal*. It is used principally for *tin plate and other descriptions of first-class iron*, and also for conversion into steel under the Bessemer process. The following is an analysis of *Kilgetty anthracite (steel) iron*:—

{ Iron 94.08	{ Sulphur 0.04	} = 100.11
{ Carbon 4.47	{ Phosphorus 0.08	
{ Silicon 0.96	{ Manganese 0.48	

Le charbon qui provient de ces houillères est regardé comme la plus pure anthracite qui se trouve au monde, et est largement employé dans toute la Grande Bretagne et l'Irlande pour faire les qualités les plus belles de malt pâle, et pour sécher le grain, le houblon, etc., usage pour lequel il occupe la position la plus élevée, en raison de sa pureté et de sa durabilité. Ci-après est l'analyse de cette houille:—

{ Carbone . 94.18	{ Soufre 0.15	} = 100
{ Hydrogène . 2.72	{ Oxygène 1.82	
{ Nitrogène . 0.15	{ Cendres 0.98	

Cette houille a été également employée avec succès pour le chauffage des machines à bord du *Yacht de Sa Majesté*, du 'Great Britain,' du 'Royal Charter,' et autres steamers. Elle a la qualité de ne produire nulle fumée, étant très-dure, résistant très-bien aux effets de l'attrition, possédant une gravité spécifique considérable (1.420), n'occupant que fort peu de place (32.75 pieds cubes—0.896 m. cub.—par tonne—1.015 kilogr.) et étant douée d'une haute puissance d'évaporation (10.55 livres—plus de 4.540 kilogr.—d'eau par 1 livre—0.454 k.—de houille).

La plus petite, ou 'culm,' est d'un usage très-répandu pour brûler la chaux en Angleterre, dans les Galles, en Irlande et en France.

Le fer en gueuses manufacturé à ces forges est de la plus belle qualité, provenant des minerais natis du district mélangés avec les meilleures hématites, et fondus avec la célèbre *anthracite* de Kilgetty. Cette fonte est employée principalement pour la fabrication du fer-blanc et autres fers de première qualité, et aussi pour conversion en acier d'après le procédé Bessemer. Voici l'analyse du Fer de Kilgetty à l'anthracite (acier):—

{ Fer . 94.08	{ Soufre . 0.04	} = 100.11
{ Carbone 4.47	{ Phosphore 0.08	
{ Silice . 0.96	{ Manganèse 0.48	

Die Kohle aus diesen Kohlengruben wird für die reinste Anthracit der Welt gehalten; sie wird Grossbritannien und Irland zum Bereiten der feinsten Qualitäten von hellem Malz und zum Trocken von Korn, Hopfen u. s. w. gebraucht, für welchen Zweck sie die höchste Stellung, wegen ihrer ausserordentlichen Reinheit und Dauer, einnimmt. Das Folgende ist eine Analyse der Kohle:—

{ Kohlenstoff . 94.18	{ Schwefel . 0.15	} = 100
{ Wasserstoff . 2.72	{ Sauerstoff . 1.82	
{ Stickstoff . 0.15	{ Asche . 0.98	

Sie ist ebenso erfolgreich für Dampferzeugungszwecke auf der *Yacht ihrer Majestät*, der 'Great Britain,' auf der 'Royal Charter,' und auf andern Dampfschiffen angewandt worden. Sie ist vollkommen *frei von Rauch*, sehr hart, widersteht der Wirkung der Reibung ist von *grosser spezifischer Schwere* (1.420), nimmt sehr wenig Raum (32,75 Kubikfuss für eine Tonne) ein und ist von *hoher dämpferzeugender Kraft* (10,55 Pfund Wasser auf ein Pfund Kohle).

Die kleine Kohle oder 'Culm' wird sehr viel zum Kalkbrennen in England, Wales, Irland und Frankreich gebraucht.

Das auf diesen Eisenhütten gemachte Roheisen ist von der feinsten Art; es wird von den einheimischen Erzen des Districts (mit einer Beimischung der besten Hematiten) gewonnen und mit der berühmten *Anthracit-Kohle* von Kilgetty geschmolzen. Sie wird hauptsächlich für *verzinnete Platten und andere Arten von Eisen erster Qualität* benutzt, und ebenso zur Verwandlung des Eisens in Stahl durch den Bessemer-Process. Das Folgende ist eine Analyse des *Kilgetty-Anthracit-(Stahl-) Eisens*:—

{ Eisen . 94.08	{ Schwefel . 0.04	} 100.11
{ Kohlenstoff 4.47	{ Phosphor . 0.08	
{ Silicium . 0.96	{ Braunstein 0.48	

NEW SOUTH WALES GOLD DISTRICTS.

Two Cases illustrating the various Deposits encountered in Sinking for Gold in this Colony, and the Character of the Gold thus obtained; prepared from Contributions by the Commissioners of the Gold Fields, and exhibited by SIR DANIEL COOPER, BART.

The value of the gold specimens in this series is calculated, after melting, at 3*l.* 17*s.* 10½*d.* the ounce standard; the silver being treated as alloy, and its value neglected.

The following is a detailed catalogue of the series:—

NORTHERN DISTRICT.

NUNDLE.		
No.	Thickness of stratum	
1	4 feet	Black mould.
2	4 feet	Ironstone (trappean).
3	6 feet	Loam.
4	6 feet	Red gravel.
5	5 feet	Wash dirt, yielding 3½ dwts. of gold per load of 50 buckets.
6		Gold from the above, containing after melting, in 1,000 parts—gold, 937·6; silver, 62·0. Value per oz. 3 <i>l.</i> 19 <i>s.</i> 7 <i>d.</i>
7		Bed rock, baked schistose rock.

This locality contains about 150 working miners, and yields a monthly average of about 350 ozs. of gold; the washing being usually effected by means of sluice boxes.

PEEL RIVER.

1	1 ft. 6 in.	Red loam.
2	2 feet	Stiff ferruginous clay.
3	1 foot	Wash dirt.
4		Gold from the above, containing, after melting, in 1,000 parts—gold, 929·5; silver, 67·5. Value per oz. 3 <i>l.</i> 18 <i>s.</i> 11 <i>d.</i>
5		Bed rock, decomposed serpentine.

The gold here is obtained by ground sluicing, and a party of three can get about 19 dwts. of gold daily. Working population, about 150; average monthly yield, about 350 ozs.

HANGING ROCK.

1	3 feet	Red loam and clay.
2	5 feet	Loam, approaching to clay.
3	5 feet	Drift.
4	2 feet	Quartz crystals imbedded in ferruginous cement.
5	5 feet	Wash dirt, yielding 20 ozs. of gold to 40 cubic feet.

No.	Thickness of stratum	
6		Gold from the above, containing, after melting, in 1,000 parts—gold, 934·9; silver, 63·1. Value per oz. 3 <i>l.</i> 19 <i>s.</i> 5 <i>d.</i>
7		Bed rock, decomposed trap, hardened. Here, also, the gold is obtained by ground sluicing. Working population, about 150; monthly yield, about 350 ozs.

ROCKY RIVER.

1	2 ft. 6 in.	Black soil.
2	2 ft. 0 in.	Stiff clay.
3	27 ft. 0 in.	Nodular (amygdaloidal) basalt.
4	33 ft. 0 in.	Basalt in jointed masses.
5	3 ft. 6 in.	Blue clay and scoria, baked.
6	5 ft. 0 in.	Yellow magnesian clay.
7	6 in.	Black clay.
8	3 ft. 0 in.	Fine yellow sand and clay.
9	3 ft. 6 in.	Black clay, becoming shaly when dry.
10	3 ft. 6 in.	Buff sand, or soft sandstone.
11 } 12 }	6 ft. 6 in.	{ Auriferous drift, fine at top, coarse in the middle, and still coarser at bottom.
13		Gold from the above, containing, after melting, in 1,000 parts—gold, 969·3; silver, 26·9. Value per oz. 4 <i>l.</i> 2 <i>s.</i> 4 <i>d.</i>
14		Bed rock soft granite, red and grey.

The auriferous drift is raised by windlass and bucket. It is washed in sluice boxes when water is abundant, and by cradle when it is scarce. The yield from the claim whence samples have been taken averaged on its first working 5 ozs. per load of 50 buckets, the bed rock being carefully scraped, and the drift washed to a thickness of 2 feet above the

granite. The party now working the claim remove the drift to a thickness of 4 or 5 feet above the granite, obtaining about 15 dwts. per load, and occasionally meeting with a block, of which the produce is equal to that of the original ground. A section of this shaft accompanies the series marked 'Sydney Flat Claim No. 1, Rocky River.'

TIMBARRA—PRETTY GULLY.

No. of stratum	Thickness of stratum	
1	3 ft.	Drift, one foot below the surface.
2	3 ft.	Whitish clayey wash-dirt, yields 1 grain per dish.
3	1 ft. 6 in.	Whitish shaly wash-dirt, yields 2 dwts. per tub.

WESTERN DISTRICT.

IRONBARK CREEK.

1	1 to 2 ft.	Dark vegetable soil, mixed with rounded fragments of trap.
2	20 feet.	Greyish blue trap tuff.
3	2 to 4 ft.	Quartz fragments in ferruginous and argillaceous cement.
4	6 to 10 ft.	Hardened deposit of clay.
5	1 to 4 ft.	Washing stuff quartzose drift with whitish schist, yielding 3 dwts. of gold per load.
6		Gold from the above, containing after melting, in 1,000 parts—gold, 971·8; silver, 24·2. Value per oz. 4 <i>l.</i> 2 <i>s.</i> 6 <i>d.</i>
		Bed rock, white slate.

The working population of this locality number about 50 miners who collectively obtain a monthly average of 200 ozs., usually by means of puddling machines.

CARCOAR.

1	Not given.	Ferruginous trap.
2	"	Grey sandy clay.
3	"	Quartz gravel.
4	6 in. to 1 foot.	Washing stuff. Quartzose drift, with light yellow shale, yielding 2 dwts. per tub.
5		Gold from the above, containing, after melting, in 1,000 parts—gold 837·0; silver, 159·0. Value per oz. 3 <i>l.</i> 11 <i>s.</i> 1 <i>d.</i>
6		Bed rock, white decomposed slate.

The gold is obtained by tub, cradle, and sluice box. Population, about 20 Europeans, and 60 to 70 Chinese; average monthly yield, about 100 ozs.

MERRUNDEE.

1 } 2 }	Not given.	Surface soil, ferruginous.
3	1 ft.	Washing stuff yields about 2 dwts. of gold per tub of 30 gallons.

No. of stratum	Thickness of stratum	
4		Gold from the above, containing, after melting, in 1,000 parts—gold, 899·5; silver, 96·5. Value per oz. 3 <i>l.</i> 16 <i>s.</i> 5 <i>d.</i>
5		Bed rock, schistose rock.

POVERTY POINT.

1	3 feet	Drift 1 foot below the surface
2	2 to 8 ft.	Drift yielding $\frac{1}{4}$ gr. of gold per dish.
3	2 feet	Drift yielding 2 grs. of gold per dish.
4		Gold from the above, containing, after melting, in 1,000 parts—gold, 928·5; silver, 66·0. Value per oz. 3 <i>l.</i> 18 <i>s.</i> 10 <i>d.</i>
5		Bed rock, decomposing granite.

4		Gold from the above, containing, after melting, in 1,000 parts—gold 873·6; silver, 121·7. Value per oz. 3 <i>l.</i> 14 <i>s.</i> 2 <i>d.</i>
5		Bed rock schist.
		Contains a working population of about 70 Europeans, and 200 Chinese, who obtain about 200 ozs. monthly, by means of tub, cradle, and sluices.

STONEY CREEK.

1	3 to 10 ft.	Black soil.
2	12 to 30 ft.	Pebbly drift.
3	3 to 6 in.	Washing stuff, consisting principally of rounded fragments of schist, yielding 2 dwts. of gold per tub.
4		Gold from the above, containing, after melting, in 1,000 parts—gold, 936·8; silver, 59·7. Value per oz. 3 <i>l.</i> 19 <i>s.</i> 7 <i>d.</i>
5		Bed rock, drab-coloured slate.
		Contains working population of about 200, chiefly Chinese, who obtain a monthly average of from 300 to 400 ozs. by cradles, tubs, and sluice boxes.

OPHIR.

1 } 2 }	Not given.	{ Red soil. { Sandy grit.
3	8 in. to 1 ft.	Washing stuff, quartzose drift, mixed with pale yellow shale, yielding 3 dwts. of gold per tub.
4		Gold from the above, containing, after melting, in 1,000 parts—gold, 915·4; silver, 82·2. Value per oz. 3 <i>l.</i> 17 <i>s.</i> 9 <i>d.</i>
5		Bed rock, white slate.

This locality contains a working population of about 50 Europeans, and 60 to 70 Chinese, obtaining collectively a monthly average of about 150 ozs. by means of tub, cradle, and sometimes by sluicing.

MUDGE—PIPE-CLAY CREEK.

1	10 feet	Stiff brown clay.
2	12 feet	Clay containing much oxide of iron.

No. of stratum	Thickness of stratum	
3	5 feet	Drift containing quartz (white, and ferruginous), clay and shale, yielding 1 gr. of gold per tub.
4	1 foot	Clay coloured by oxide of iron, not auriferous.
5	4 in. to 1 ft.	Quartzose drift, &c., yielding 2 dwts. per tub.
6		Gold from the above, containing, after melting, in 1,000 parts—gold, 898.5; silver, 100.5. Value per oz. 3 <i>l</i> . 16 <i>s</i> . 4 <i>d</i> .
7		Bed rock, slate.

These samples are from a flat adjoining the creek, which is a tributary of the Cudgegong, running westerly. The method of working is by tub washing. At the opening of these diggings there were about 150 miners on the creek, obtaining on an average 3½ ozs. monthly per man.

WINDEYER—RICHARDSON'S POINT, MEROO RIVER.

1	14 feet	Surface soil, sandy clay.
2	3 feet	Drift containing quartz, flat shaly pebbles, &c. yielding 3 grs. of gold per tub.
3	1 foot	Drift containing quartz, flat shaly pebbles, ironstone, &c. yielding 9 grs. of gold per tub.
4	4 feet	Washing stuff; bright yellow clay, with quartz, ironstone, &c. yielding 30 grs. per tub.
5		Gold from the above, containing, after melting, in 1,000 parts—gold, 959.0; silver, 37.5. Value per oz. 4 <i>l</i> . 1 <i>s</i> . 5 <i>d</i> .
6		Bed rock, slate.

Richardson's Point is apparently the old bed of the Meroo. It is about 4 acres in extent, and at one period had 100 miners on it. Average produce, 5 ozs. monthly per man.

WINDEYER—DEVIL'S-HOLE CREEK.

1	7 feet	Drab-coloured soil.
2	2 feet	Drab-coloured clay.
3	2 feet	Decomposing ferruginous conglomerate.
4	1 foot	Washing stuff; quartz, ironstone, clay, &c. yielding 3 dwts. per tub.
5		Gold from the above, containing, after melting, in 1,000 parts—gold, 946.0; silver, 53.5. Value per oz. 4 <i>l</i> . 0 <i>s</i> . 4 <i>d</i> .
6		Bed rock, slate.

Devil's-Hole Creek is a tributary of the Meroo, and a mile in length, running into it in a northerly direction. At the opening of the diggings on this creek, there were about 1,200 miners, producing, by tub washing, cradle, and sluicing, 7,200 ozs., per month.

HARGRAVES—LOUISA CREEK.

1	1 foot	Drab clay.
2	8 feet	Whitish clay, with ironstone nodules interspersed.

No. of stratum	Thickness of stratum	
3	1 foot	Washing stuff, whitish clay with ironstone, yielding 4 grs. of gold per tub.
4		Gold containing, after melting, in 1,000 parts—gold, 914.7; silver, 84.3. Value per oz. 3 <i>l</i> . 17 <i>s</i> . 8 <i>d</i> .
5		Bed rock or bar of slate, breaking up from 3 inches to 3 feet in depth, in the pockets and crevices of which gold is found, averaging 6 dwts. to the tub.

The Louisa Creek rises on the table land, 500 feet above the Meroo, and runs into it northward about 10 miles. The diggings are on the table land, about 4 miles from its rise. At the opening of these diggings 600 miners averaged, monthly, 4 ozs. per man, obtained by pugmill and tub.

TAMBAROORA—GOLDEN GULLY.

1	1 ft. 6 in.	Drab-coloured stiff soil, containing about ½ dwt. of gold per load of 50 buckets.
2	2 ft.	Yellow clay, with quartz, ironstone, &c. containing 1 dwt. per load.
3	1 ft.	Reddish yellow clay, with quartz, ironstone, &c. containing 1 dwt. per load.
4	2 ft.	Reddish yellow clay, with quartz, ironstone, &c. containing 2 dwts. per load.
5	3 ft.	Sandy clay, with quartz, ironstone, &c. containing 4 dwts. per load.
6	6 in.	Soft shale, containing from 4½ to 7½ dwts. per load.
7	6 in.	Soft shale, containing from 6 to 10 ozs. per load.
8		Gold from the above, containing, after melting, in 1,000 parts—gold, 954.0; silver, 42.0. Value per oz. 4 <i>l</i> . 1 <i>s</i> .
9		Bed rock, gneiss.

The whole depth from surface to bed rock is washed, and the yield averages from 3 to 3½ dwts. per load. A horse puddling machine is usually employed for this purpose. About 9 inches in depth of the bed rock itself is also washed, yielding about 1 dwt. per load.

TAMBAROORA—DIRT-HOLE CREEK.

1	3 feet	Black soil.
2	6 feet	Shaly and schistose drift, with quartz, ironstone, &c. containing 1 dwt. of gold per load of 50 buckets.
3	5 feet	Sandy clay, containing 2½ dwts. per load.
4	1 foot	Sandy drift, containing 6 to 7 dwts. per load.

No. of stratum	Thickness of stratum	
5	Gold from the above, containing, after melting, in 1,000 parts—gold, 943·5; silver, 53·0. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 1 <i>d.</i>	
6	Bed rock, slate.	

The whole depth, with exception of surface, is washed by means of horse puddling machines.

TAMBAROORA—BALD HILLS.

1	5 feet	Reddish clay
2	2 feet	Ditto, ditto.
3	2 feet	Drift, quartz, ironstone, and sandy clay.
4	2 feet	Clay (white).
5	Gold from the above, containing, after melting, in 1,000 parts—gold, 943·0; silver, 54·0. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 1 <i>d.</i>	
6	Bed rock, slate.	

The whole depth, from surface to bed rock, is washed by means of horse puddling machines, and yields from 3 to 3½ dwts. per load.

TAMBAROORA—LOWER TURON.

1	2 feet	Ferruginous clay, with pebbles.
2	8 feet	Ditto, ditto.
3	4 feet	Sandy clay, with pebbles, quartz, &c.
4	Gold from the above, containing, after melting, in 1,000 parts—gold, 948·0; silver, 50·0. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 6 <i>d.</i>	
5	Bed rock, drab slaty rock.	

The whole depth, from surface to bed rock, is often washed; the ordinary hand-washing in tubs being the method employed. The average yield is from 4 to 5 dwts. per load of 50 buckets. The diggings are situated in the river bed.

TAMBAROORA—MAQUARIE RIVER.

1	8 feet	Dark coloured fine drif, with quartzite nodules.
2	5 feet	Clay with pebbles.
3	7 feet	Ditto ditto.
4	Gold from the above, containing, after melting, in 1,000 parts—gold, 946·6; silver, 45·5. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 5 <i>d.</i>	
5	Bed rock, drab slaty rock.	

The surface layer is thrown aside, and the other two are washed in 'Long-toms,' yielding 4 to 4½ dwts. per load.

PYRAMUL CREEK.

1	3 feet	Quartz, in argillaceous cement.
2	3½ feet	Stiff clay, with quartz.
3	Gold from the above, containing, after melting, in 1,000 parts—gold, 948·0; silver, 48·0. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 6 <i>d.</i>	
4	Bed rock, sandstone of the slate formation.	

These diggings are in the creek bed. The whole depth is washed by 'ground sluicing,' and yields on the average 3¾ dwts. per load.

CENTRAL TURON.

No. of stratum	Thickness of stratum	
1	4 feet	Loam.
2	3 feet	Pebbly drift.
3	Not given	Washing stuff, pebbly drift.
4	Gold from the above, containing, after melting, in 1,000 parts—gold 928·6; silver 68·5. Value per oz. 3 <i>l.</i> 18 <i>s.</i> 10 <i>d.</i>	
5	Bed rock, trappean.	

The claim whence the samples are taken is situated in the river bed. The preliminary works are of a costly and interesting character. A tunnel was driven through 354 feet of solid rock, forming a neck of land, to drain a bend of the river three-quarters of a mile long. It occupied 10 men two years, and cost 3,425*l.* The average yield is about 3 dwts. per tub. The labour employed by this company involves a yearly expenditure of 10,500*l.*

WATTLE FLAT.

1	6 feet	Surface earth.
2	2 feet	Washing stuff, yielding 1 dwt. per tub.
3	Gold from the above, containing, after melting, in 1,000 parts—gold, 925·7; silver, 72·1. Value per oz. 3 <i>l.</i> 18 <i>s.</i> 7 <i>d.</i>	
4	Bed rock, eisenkiesel, with cubes of pyrites, intersected with small quartz veins.	

The work in this locality is almost entirely carried on by puddling machines, which are annular wooden troughs, sunk in the ground, and through which harrows are drawn by a horse working within the ring. This operation disintegrates the mass, which is afterwards washed by a cradle.

CENTRAL TURON—ERSKINE FLAT.

1	5 feet	Clay, with pebbles of quartz, &c.
2	12 feet	Sand, with pebbles of trap, slate, quartz, &c.
3	Not given.	Washing stuff, average yield, ½ dwt. of gold per tub.
4	Gold from the above, containing, after melting, in 1,000 parts—gold, 918·8; silver, 78·5. Value per oz. 3 <i>l.</i> 18 <i>s.</i>	
5	Bed rock, schistose vein.	

Dry bank diggings. The whole of this bank is washed to a depth of 40 feet. The average yield per tub is ½ dwt. The gold is obtained by sluicing, the water being brought a distance of 5 miles to obtain the requisite elevation. Though the yield is small, the immense quantity which is passed through the sluices, when water is plentiful, makes a good return. The cost of such works is sometimes 3,000*l.* The working population of the Central Turon is about 1,800, and the monthly yield about 2,400 ozs.

SOUTHERN DISTRICT.

BURRANGONG—LAMBING FLAT.

No. of stratum	Thickness of stratum	
1	1½ foot	Dark sandy soil.
2	1½ foot	Sandy granitic drift.
3	1 foot	Drift with much quartz and mica.
4	10½ feet	Sandy micaceous drift.
5	3½ feet	Argillaceous ditto, with much small angular quartz.
6	1½ foot	Ditto, with decomposing granite.
7		Gold from the above, containing, after melting, in 1,000 parts—gold 949.0; silver, 44.5. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 7 <i>d.</i>
8		Bed rock, soft granite.

The shaft whence specimens were taken is 3 feet by 22 inches, with a depth of 19½ feet. The average yield of the washing stuff is 1 dwt. to the bucket.

BURRANGONG—TIPPERARY GULLY.

1	4 feet	Fine quartzose sand with reddish argillaceous cement.
2	8 feet	Stiff clay, containing nodules of oxide of iron.
3	7½ feet	'Cement,' quartzose gravel.
4	10 feet	Micaceous clay.
5	12 feet	Argillaceous 'cement' with mica.
6	9½ feet	Whitish clay.
7	5½ feet	Argillaceous gravel, with oxide of iron.
8	2 feet	Granitic drift, with fragments of quartz.
9		Gold from the above, containing, after melting, in 1,000 parts—gold, 947.5; silver, 47.6. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 6 <i>d.</i>
10		Bed rock, decomposing red granite.

The shaft whence samples were taken is 38 inches by 22 inches, and 58½ feet deep; average yield of gold, 1½ dwts. to 6 buckets.

BURRANGONG—BACK CREEK.

1	10 in.	Dark alluvial sandy soil.
2	10 ft.	Bluish sandy clay, with vegetable matter.
3	15 ft.	Bluish alluvial clay.
4	14 ft.	Argillaceous cement, mica, felspar, and oxide of iron.
5	10 in.	Brownish drift sand, granite, mica and quartz.
6	8 ft.	Argillaceous cemented sand, granite, quartz, and mica.
7	14 in.	Drift sand, composed of crushed granite and quartz.
8		Gold from the above, containing, after melting, in 1,000 parts—gold, 887.0; silver, 107.2. Value per oz. 3 <i>l.</i> 15 <i>s.</i> 4 <i>d.</i>
9		Bed rock, granite, decomposing.

BURRANGONG.

No. of stratum	Thickness of stratum	
1	1 ft.	Dark vegetable soil.
2	2 ft.	Yellowish clay, with vegetable matter.
3	16 ft.	Yellow and blue clay.
4	10 ft.	Very hard 'cement,' containing silica, oxide of iron, and mica schist.
5	14 ft.	Hard grey clay, with vegetable matter.
6	2 ft. 3 in.	Greyish drift sand, quartz, pebbles, and mica.
7		Gold containing, after melting, in 1,000 parts—gold, 948.2; silver, 48.4. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 6 <i>d.</i>
8	6 in.	Wash drift, from which the above is obtained, consisting of argillaceous sand, quartz, pebbles, oxide of iron, and a few quartz boulders.

The Burrangong gold-fields are on a granite formation; the sinking moderate, except in some places, where the granitic drift, about 10 feet from the bottom, is cemented, and very hard. On the creeks much water has to be contended against, and almost all the shafts require to be slabbed.

BRAIDWOOD—MAJOR'S CREEK.

1	1 ft. 6 in.	Black soil.
2	2 ft. 0 in.	Ditto, but lighter colour.
3	3 ft. 0 in.	Stiff black soil.
4	2 ft. 6 in.	Drift from decomposed granite.
5	4 ft. 0 in.	Stiff black soil.
6	6 ft. 0 in.	Fine grey drift.
7	2 ft. 0 in.	Wash dirt.
8		Gold from the above, containing, after melting, in 1,000 parts—gold, 934.5; silver, 62.0. Value per oz. 3 <i>l.</i> 19 <i>s.</i> 4 <i>d.</i>
9		Bed rock, decomposing granite.

This gold-field is on granite. The average thickness of the washing stuff is from 2 to 6 feet, varying much in yield, from simply, 'the colour,' to 2 ozs. per bucket. The claim whence these samples were taken yields about 50 ozs. per week to a party of four men. The working population of the locality numbers about 250 men. The monthly yield averages about 500 ozs., but varying with the weather and supply of water. The method of working is to remove the superincumbent deposit till the wash dirt is reached; this operation is called 'stripping.' The washing stuff is then removed and washed through sluice boxes, the gold collecting in the false bottom of the sluice box.

UPPER ADELONG.

No. of stratum	Thickness of stratum	
1	Not given.	Vegetable mould.
2	„	Drift, with much hornblendic rock in nodules.
3		Gold from the above, containing, after melting, in 1,000 parts—gold 946·0 ; silver, 25·7. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 4 <i>d.</i>
4		Bed rock, slate.

LOWER ADELONG.

No. of stratum	Thickness of stratum	
1	8 ft.	Drift, with rounded pebbles of quartz, and hornblendic rock.
2	1 ft.	Ditto, ditto.
3	1 ft.	Wash drift.
4		Gold from the above, containing, after melting, in 1,000 parts—gold, 951·5 ; silver, 45·8. Value per oz. 4 <i>l.</i> 0 <i>s.</i> 10 <i>d.</i>
5		Bed rock, chlorite slate.
The washing stuff yields about 40 <i>l.</i> weekly to six men.		

CLASS XLIV.

ALLEN & HANBURY'S, *London.*

Sole Consignees of LIEBIG'S EXTRACT OF MEAT manufactured on the Establishments of Robert Tooth, Esq., Sydney, Australia.

Liebig's extract of meat contains those valuable nutritious constituents of fresh meat which are peculiar to animal food. One ounce of it contains the soluble matter of about two pounds of fresh meat, free from fat.

Strong beef-tea is made by dissolving a small tea-spoonful of the extract ($2\frac{1}{2}$ drams by weight) in half a pint of hot water, to which some salt and a little pepper should be added.

Soups.—The extract is especially valuable in the making of soups. The vegetables, herbs, and spices being boiled with the proper quantity of water, the extract is dissolved in the liquor in the proportion of from $\frac{1}{2}$ oz. to $1\frac{1}{2}$ oz. according to taste, in each gallon.

The ease and rapidity with which it may be used, the excellence of the result, and the important saving it effects in the cost, render its employment highly convenient and advantageous whenever soup is required either in large or small quantities.

L'extrait de viande de Liebig renferme tous ces éléments précieux et nutritifs de la viande fraîche qui sont le propre de la nourriture animale. Une once (28 grammes) de cet extrait contient la matière soluble de près de deux livres de viande fraîche, sans gras.

On obtient un bouillon très nutritif par la dissolution d'une demie-cuillerée à café de l'extrait (10 grammes) dans 30 centilitres d'eau chaude, à laquelle on ajoute du sel et un peu de poivre.

Potages.—Il est surtout précieux pour la confection des potages. Après avoir fait bouillir les légumes, herbes et épices dans la quantité d'eau convenable, on fait dissoudre l'extrait dans le liquide, dans la proportion de $\frac{1}{2}$ once à $1\frac{1}{2}$ once (15,55 à 46,65 gr.), selon les goûts, pour chaque 5 litres.

La facilité et la rapidité avec lesquelles on peut se servir de cet extrait, l'excellence de ses résultats, et l'importante économie qu'il permet de réaliser, rendent son usage éminemment convenable et avantageux toutes fois qu'on a besoin de confectionner du potage, soit en petite, soit en grande quantité.

FLEET & CO., *Walworth, London.*

Artificial Mineral Waters, and Chemicals used in their manufacture; Chemical Constituents of Natural Springs.

Carbonated mineral waters, from their agreeable flavour and refreshing qualities, now hold a place among the requirements of life. They are generally imitations of natural springs, charged with carbonic acid gas. Being prepared from careful analyses of the natural springs, these waters are equally useful for medicinal purposes, while they are produced at considerably less cost. As an instance we may mention the increasing use of English Seltzer, and still more recently of Vichy, which, from being more highly charged with carbonic gas, are frequently prescribed by most eminent physicians in preference to the natural waters.

Messrs. FLEET have had the distinguished honour of personally describing to H.R.H. the Prince of Wales the various processes of mineral water manufacture.

Samples of English Manufacture exhibited.

WATERS,

Soda	Lithia	Vichy
Potass	Aërated Quinine	Pyrmont
Magnesia	English Seltzer	Pullna

Lemonade, Sherryade, &c.

Messrs. FLEET are also patentees and sole manufacturers of the Steam Soda Water Machinery and Bottling Apparatus used in the preparation of these waters.

(Two Honourable Mentions, *International Exhibition, London, 1862. Prize Medal, York, 1866.*)

Purveyors of Mineral Waters to the Paris Exhibition.

ALLHUSEN, C., & SONS (LIMITED), *Tyne Chemical Works, Gateshead—Offices, Newcastle-on-Tyne.*

Sulphate, Crystals and Bicarbonate of Soda; 60 and 70 per cent. Caustic Soda; 52 per cent. Refined and Unrefined Alkali; Chloride of Lime.

Sulphate, Cristaux et Bicarbonate de Soude; 60 et 70 pour cent Soude Caustique; 52 pour cent Alkali raffiné et non-raffiné; Chlorure de Chaux.

Schwefelsaure Soda, Soda-Crystalle und doppeltkohlensaure Soda; 60 und 70 % caustische Soda; 52 % gereinigtes und ungereinigtes Alkali; Chlorkalk.

Solfato, Cristalli e Bicarbonato di Soda; Soda Caustica a 60 e 70 per cento; Alkali raffinato 52 per cento e non-raffinato; Cloruro di Calce.

These works, in addition to the plant required for the manufacture of sulphuric and hydrochloric acids, alkalis, and chloride of lime, comprise saw mills, an extensive cooperage, common and fire-brick manufactories, coke ovens, and gas works. The weekly consumption of raw materials averages:—Coals 2,250 tons, pyrites 350 tons, nitrate of soda 10 tons, chalk 900 tons, salt 450 tons, manganese 100 tons, French limestone 125 tons. The weekly production of sulphate of soda is 500 tons, equivalent to 375 tons of soda ash or unrefined alkali; which is in subsequent processes converted into quantities varying with the demand, and not exceeding separately 450 tons crystals of soda, 150 tons refined alkali, 100 tons bicarbonate of soda, 30 tons caustic soda, and 110 tons chloride of lime.

The wages paid per week amount to £1,250*l.* The articles exhibited are ordinary samples of the several chemicals manufactured in these works.

Cette manufacture comprend, en outre du matériel nécessaire pour la fabrication des acides sulphurique et hydrochlorique, des alcalis et du chlorure de chaux, des scieries, une vaste tonnellerie, des fabriques de briques communes et réfractaires, des fours à coke et une usine à gaz. La consommation des matières brutes est en moyenne, par semaine, de: Houille 2,250 tonnes; pyrites, 350 tonnes; nitrate de soude, 10 tonnes; craie, 900 tonnes; sel, 450 tonnes; manganèse, 100 tonnes; pierre à chaux française, 125 tonnes. La production de sulphate de soude est, par semaine, de 500 tonnes, équivalant à 375 tonnes de sel de soude ou alkali non-raffiné; ce qui est converti, par des procédés ultérieurs, en quantités variant selon la demande, et qui ne dépassent point, séparément, 450 tonnes de cristaux de soude, 150 tonnes d'alkali raffiné, 100 tonnes de bicarbonate de soude, 30 tonnes de soude caustique et 110 tonnes de chlorure de chaux.

Les salaires payés chaque semaine s'élèvent à £1,250*l.* = 31,250 fr. Les articles exposés sont des échantillons ordinaires des divers produits chimiques fabriqués dans cette manufacture.

Diese Fabriken, ausser dem Betriebsmaterial, welches für die Fabrication von Schwefelsäure, Salzsäure, Alkalien und Chlorkalk erforderlich ist, umfassen Sägemühlen, eine ausgedehnte Fassbinderei, Ziegelöfen für gewöhnliche und feuerfeste Backsteine, Coke-Oefen und Gasfabrik. Die durchschnittliche wöchentliche Consumption von Rohmaterialien beträgt: 2,250 Tonnen Kohlen, 350 Tonnen Schwefelkies, 10 Tonnen salpetersaure Soda, 900 Tonnen Kalk, 450 Tonnen Salz, 100 Tonnen Braunstein, 125 Tonnen Französischen Kalkstein. Die wöchentliche Production von schwefelsaurer Soda ist 500 Tonnen, welches 375 Tonnen Sodaasche oder ungereinigtem Alkali gleichkommt; dieses ist in späteren Processen in mit dem Verlangen Schritt haltende Quantitäten verwandelt, und diese Letzteren übersteigen nicht, gesondert, 450 Tonnen Soda-Crystalle, 150 Tonnen gereinigtes Alkali, 100 Tonnen doppeltkohlensaure Soda, 30 Tonnen caustische Soda und 110 Tonnen Chlorkalk.

Die wöchentlichen Arbeiterlöhne belaufen sich auf £1,250*l.* (über 8,000 Thlr.) Die ausgestellten Artikel sind ordinaire Proben der in diesen Fabriken verfertigten Chemicalien.

Questo stabilimento, oltre il materiale necessario per la fabbricazione degli acidi solforici ed idroclorici, alcali, e cloruro di calce, comprende anche seghe a macchina, una gran fabbrica di botti, una fabbrica di mattoni da fuoco e comuni, forni da coke, e fabbrica di gas. Il consumo settimanale di materie prime ascende in media a 2,250 tonnellate di carbon fossile, 10 tonnellate di soda, 900 tonnellate di gesso, 450 tonnellate di sale, 100 tonnellate di manganese, 125 tonnellate di pietra calcarea francese. Il prodotto settimanale in solfato di soda è 500 tonnellate, equivalente a 375 di genere di soda o alcali non raffinato; il quale nei processi susseguenti è convertito in quantità che variano secondo la richiesta, e non eccedenti ciascuno separatamente le 450 tonnellate di cristalli di soda, 150 tonnellate di alkali raffinato, 100 tonnellate di bicarbonato di soda, 30 tonnellate di soda caustica, e 110 tonnellate di cloruro di calce.

I salari pagati settimanalmente ammontano a £1,250*l.* ster. Gli oggetti esposti sono campioni usuali delle diverse preparazioni chimiche fabbricate in queste officine.

BORWICK'S BAKING POWDER,

Invented about twenty years ago, by Mr. GEORGE BORWICK, of 24 Chiswell-street, London, is used very extensively for making digestive bread, without yeast, and for improving puddings and pastry, by rendering them light and digestible. It is strongly recommended by the *Lancet*, and by many of the most eminent medical men of the day.

THE PATENT OZONISED COD-LIVER OIL.

The peculiar effects of Ozone upon organic structures, and more especially upon dead blood, were first noticed by Mr. Dugald Campbell, the Analytical Chemist to the Brompton Hospital for Consumption; and to him is due the suggestion of impregnating Cod-Liver Oil and other oils with Ozone, and thus conveying artificially to the lungs of the delicate and consumptive, without the effort of inhalation, and in larger proportions than found in the atmosphere, this extraordinary life-giving agent.

The experiments with the Ozonised Cod-Liver Oil were undertaken by the late Dr. Theophilus Thomson, and his colleague, Dr. Scott Alison, at the Consumption Hospital, the results being detailed in a paper read before the Royal Medical and Chirurgical Society of London.

This success exceeded their most sanguine expectations, the quick pulse (the most correct index of the severity of the disease) was unexpectedly reduced to its proper standard, and further experiments proved that other favourable symptoms speedily followed. A healthy tone was given to the appetite, long-standing coughs were removed, the system became strengthened and invigorated, and not only have the delicate become strong and healthy, but *patients in the first stages of consumption have been restored to perfect health*—in fact, it is now proved beyond doubt, that Ozone is to the weak, delicate, and consumptive, what Quinine is to those who are affected with fever—the nearest approach to a specific yet discovered.

Mr. BORWICK, 24 Chiswell-street, sole licensee.

Inventée il y a peu près vingt ans par M. GEORGE BORWICK, du No. 24, Chiswell-street, à Londres, cette poudre est d'un usage très-répandu pour faire du pain digestif, sans levûre de bière, et pour améliorer les puddings et la pâtisserie en les rendant plus légers et d'une digestion plus facile. Elle est fortement recommandée par la '*Lancette*,' et par nombre de médecins des plus éminents.

HUILE DE FOIE DE MORUE OZONISÉE,
BREVETÉE.

Les effets particuliers de l'Ozone sur les tissus organiques, et plus spécialement sur le sang mort, furent d'abord remarqués par M. Dugald Campbell, Pharmacien Analyste de l'Hôpital de Brompton pour la Consomption; et c'est à lui qu'est due la suggestion d'impregner d'Ozone l'huile de Foie de Morue, et autres, et de faire parvenir ainsi cet extraordinaire agent de vie dans les poumons des personnes délicates et atteintes de consommation, sans effort d'inhalation, et en proportions plus grandes que celles qui se trouvent dans l'atmosphère.

Les expériences faites avec l'Huile de Foie de Morue Ozonisée furent entreprises par feu le Dr. Theophilus Thomson, et son confrère, le Dr. Scott Allison, à l'Hôpital pour la Consomption, et les résultats détaillés en furent donnés dans un mémoire lu devant la Société Royale de Médecine et de Chirurgie de Londres.

Le succès dépassa leurs espérances les plus vives; la vitesse du pouls (l'indicateur le plus correct de la gravité de la maladie) fut, contre leur attente, réduite à son état normal, et des expériences subséquentes prouvèrent que d'autres symptômes favorables suivaient rapidement. L'appétit fut recouvré, des toux qui duraient depuis longtemps disparurent, le système général reprit de la force et de la vigueur, et non seulement des personnes délicates devinrent robustes et d'une bonne santé, mais *des malades aux premiers degrés de la consommation furent rendus à une santé parfaite*. Dans le fait, il est maintenant prouvé, sans doute possible, que l'Ozone est pour les personnes faibles, délicates et atteintes de consommation ce que le Quinquina est pour les malades de la fièvre—le spécifique le plus certain découvert jusqu'à présent.

M. BORWICK, 24 Chiswell-street, seul cessionnaire du brevet.

SAMUEL CLARKE'S *new Patent Pyramid Nursery Lamps and Food Warmers, with Porcelain Panakins, having Spouts.*

Nouvelles Lampes Pyramides pour Chambres d'Enfants et à Chauffer les Aliments, avec Vases de Porcelaine à bec, de SAMUEL CLARKE, brevetées.

No. 1 holds half-pint food, besides water; price 3s. 6d. each. No. 2 holds three-quarters pint food; price 5s. each. No. 3 holds one pint food; price 6s. Clarke's hot water lamps, price 2s. 6d. each. Clarke's pyramid light lamps, 9d. and 1s. each.

CAUTION.—*The Patentee begs to state that he can warrant the Food Warmers to answer the purpose for which they are recommended ONLY when the Pyramid Night Lights (9 hours) are burned in them.*

CLARKE'S pyramid night lights (9 hours) are increased in size, and give the most light, they are therefore best suited for nursery lamps: 8d. per box of 8 lights.

N.B.—All night lights not protected by a lamp are extremely dangerous, and should not be used.

The pyramid night lights burn best when newly made, and should be kept in a cool dry place.

Le No. 1 contient une demi-pinte (29 centilitres) d'aliments en outre de l'eau; prix 3s. 6d. (4 fr. 35.) Le No. 2 contient trois quarts de pinte (42 centilitres) d'aliments; prix 5s. (6 fr. 25.) Le No. 3 contient une pinte (56 centilitres) d'aliments; prix 6s. (7 fr. 50.) Lampes à chauffer l'eau de Clarke, prix 2s. 6d. (3 fr. 10.) Lampes veilleuses pyramides de Clarke, 9d. et 1s. (90 les et 1 fr. 25.) chaque.

Avis.—*L'inventeur, breveté, fait observer qu'il ne peut garantir l'usage satisfaisant de ses Lampes à chauffer les aliments qu'autant qu'on y brûle ses Veilleuses Pyramides (durant 9 heures).*

Les veilleuses pyramides de Clarke (durant 9 heures) ont leur dimension augmentée, et donnent le plus de lumière; ce sont donc celles qui conviennent le mieux pour lampes de chambres d'enfants: 8d. (80 cen.) la boîte de 8 veilleuses.

N.B.—Toutes veilleuses non protégées par une lampe sont d'un usage extrêmement dangereux, et ne devraient point être employées.

Les veilleuses pyramides brûlent le mieux lorsqu'elles ont été récemment fabriquées, et doivent se conserver dans un endroit frais et sec.

FIELD, J. C. & J., *Patent Candle Works, Lambeth Marsh, London.*

1862

1851

1865

J. C. & J. FIELD were the introducers and first makers of paraffine candles in England (for which they obtained a Prize Medal at the Universal Exhibition in 1862); they are supplied to Her Majesty's Government, for the use of the military stations abroad, the Houses of Lords and Commons, &c. &c.

These candles are now furnished with FIELD's *patent self-fitting end*, and are made in various beautiful shades of colour.

J. C. et J. FIELD ont été les premiers à introduire et à fabriquer en Angleterre les bougies de paraffine (pour lesquelles ils ont obtenu une Médaille à l'Exposition Universelle de 1862), qui sont employées par la Gouvernement de Sa Majesté pour ses stations militaires outre mer, pour les Chambres des Lords et des Communes, etc. etc.

Ces bougies sont maintenant pourvues des *bouts coniques de FIELD* (brevetés), et se fabriquent en diverses belles nuances de couleur

Patentees and sole manufacturers of *patent self-fitting candles*, so constructed that the candles require no scraping, nor the use of paper; they *fit all-sized sockets* or candlesticks, *always remain perfectly upright*, and combine cleanliness, economy, and safety, and burn to the end.

These candles are made in all the usual sizes and qualities for chandeliers, table, or chamber use.

United Service Soap Tablets.—Purity of material and durability of perfume guaranteed.

In tablets,
three and
five to
the lb.

Free from
cocoa nut
oil.

Seuls fabricants brevetés des *bougies s'adaptant elles-mêmes au chandelier* (brevetés), fabriquées de façon qu'on n'ait besoin ni de les gratter, ni d'y ajouter du papier; elles *s'adaptent aux chandeliers* ou aux bobèches de tout calibre, et restent parfaitement droites; réunissant la *propreté, l'économie et la sûreté*, et brûlant jusqu'au bout de la mèche.

On fabrique ces bougies dans toutes les grandeurs et les qualités d'usage, tant pour les candélabres que pour la table, ou pour la chambre à coucher.

Pains de Savon, dit 'United Service Soap.'—Purité de matériel et durée de parfum sont garanties.

En pains,
trois et
cinq à la
livre.

Sans
l'huile de
coco.

Manufacturers of wax, spermaceti, and stearine candles, perfumed sealing wax of all colours and qualities, wax night-lights, bougies, and lighting wicks.

Fabricants de bougies de cire, de spermaceti et de stéarine, de cire à cacheter parfumée de toutes couleurs et qualités, de veilleuses de cire, de bougies, et d'allumette-mèches.

Paraffine and Patent Self-fitting Candle Works, Lambeth Marsh, London, S.

JOHNSON, MATTHEY, & CO., *Hatton Garden Works, London.*

Platinum Manufacturers. Refiners, Melters, and Assayers to the Bank of England.

(Platinum and Rare Metals, Group V. Class 40. Metallurgical and Chemical Preparations, Group V. Class 44.)

Prize Medals awarded for 'Excellence in the manufacture and preparations of Platinum and the rare metals, and for chemical products,' at the International Exhibitions, London, 1851; Paris, 1855; London, 1862; Dublin, 1865.

The principal objects exhibited by this firm in Class 40 are the following:—

A Platinum Boiler or Retort for the concentration of sulphuric acid, capable of rectifying 8 tons per diem. Value, 2,400*l*.

A second Platinum Boiler, for the same purpose, complete with syphon and all appurtenances, capable of rectifying 5 tons of sulphuric acid per diem. Value, 1,750*l*.

Several improvements are introduced in these boilers, but the chief feature is that they are manufactured without gold soldered joints, the whole boiler being as if made out of a single piece of metal, rendering them much stronger, more durable, and less expensive than those made on the old principle.

The metal employed in their manufacture is specially prepared of chemical purity.

The improvements in the syphons are also of some importance, the bayonet ball and socket joints greatly facilitating the removal of the syphon at any time, and doing away with the gun metal clamps hitherto used, which constantly required renewal.

Platinum Ingot for boiler making, of chemically pure metal, made in a single forging. Value, 1,100*l*.

Platinum Alembic for the use of mints, refineries, and chemical manufacturers. Chiefly for the separation and refining of gold and silver, but capable of adaptation to other purposes.

The economy of refining the precious metals in such apparatus is not only very great, but it is effected with much greater rapidity, certainty, and freedom from risk of accidents.

Platinum Tubes, soldered with pure platinum, can be made of any length or size, superior to those made with gold soldered joints, both in strength and wear, and superior to those made by pressure, in consequence of the metal not being subjected to the severe strain the pressed tubes have to undergo, which necessitates a much thicker metal being used than is required for ordinary purposes.

Platinum Pyrometer. Patent. An indicator which acts by the variation of heat. It is a novel application of the spiral coil of a compound lamina of two metals of unequal expansion by heat.

Platinum wire, sheet, foil, gauze, crucibles, capsules, sponge, gun vents. Preparations and compound salts, &c. &c.

Specimens of the rare metals in various forms. Palladium, iridium, rhodium, osmium, ruthenium, indium, magnesium, thallium, tellurium, chromium, titanium, manganese, &c. &c.

A series of 1 kilo (2 lbs.) each of most of the known precious, rare, and base metals, chemically pure and of symmetrical form.

A series exemplifying the two processes of refining and working bullion, showing the various forms in which the precious metals in their rough state reach this country, the metals and solutions of metals in the different stages of refining and precipitation, with the by-products and salts, and the pure metals as ultimately obtained and sent into the market for minting and other purposes in bars and grain.

A series of specimens of gold dust from nearly all the known sources of gold, showing their variations of character.

Specimens and preparations of the rare and precious metals.

Samples of sodium amalgam as employed under the patents of William Crookes, Esq., for the extraction of gold from ores, and the results in gold obtained from very careful working with and without its use.

These results are sufficiently surprising to warrant publication, the ore selected being a compound mineral from California, with which great difficulty had been experienced in working in the ordinary way.

The results obtained in Messrs. Johnson, Matthey, & Co.'s Works were as under:—

	oz. dwt. grs.
Produce by ordinary process of amalgamation . . .	per ton 2 16 0
Produce by sodium process of amalgamation . . .	„ 7 0 6
Produce by Assay . . .	„ 7 9 0

The trials were twice repeated, and the results obtained were absolutely uniform.

Many of the specimens in this case cannot have a definite value attached to them, but the total value exhibited may be estimated at 20,000*l*.

In the case Class 44 are exhibited chemical and metallurgical preparations, more especially of the precious metals. Nitrate of silver, in all commercial forms, chloride of gold, &c. &c., and a series of colours for decorative purposes manufactured by a new process, which have characteristics of harmlessness and brilliancy never before obtained.

McDOUGALL BROTHERS, *Manufacturing and Agricultural Chemists*, 11 *Arthur-street West*,
London. E.C., and Riga-street, Manchester.

Disinfectants, Sheep and Cattle Dressings, Manure, Chemicals, &c.

McDOUGALLS'

PATENT CARBOLIC ACID DISINFECTANTS

(in powder and fluid)

Combine the good effects of the two most powerful disinfectants and antiseptics known, carbolic and sulphurous acids. They are the cheapest and most efficient agents for sanitary purposes. Convenient for use, and free from any injurious ingredients.

McDOUGALLS'

PATENT CARBOLIC DISINFECTING SOAP

(white and dark qualities),

For toilet, cleansing and disinfecting purposes, and the destruction of insect life, without poison.

McDOUGALLS' CARBOLIC ACID,

In various qualities,

For disinfecting, medicinal, and manufacturing purposes.

McDOUGALLS' MANURE

For the sugar, beet, coffee, tobacco, tea, &c., plants.

McDOUGALLS' PATENT NON-POISONOUS SHEEP
 AND CATTLE DRESSINGS,

For the destruction of insects infesting animals, and healing cutaneous diseases.

McDOUGALLS'

PATENT PHOSPHATIC YEAST-SUBSTITUTE AND
 SELF-RAISING FLOUR,

For the production of all kinds of Bread and Pastry, without fermentation.

Pieric Acid, Hydrated Peroxide of Iron, Hyposulphite of Soda, Phosphate of Soda, Prepared Horn Piths, &c.

Chemicals and Drysalteries.

LES DÉSINFECTANTS À L'ACIDE CARBOLIQUE,

BREVETÉS, DE McDOUGALL,

Combinent les bons effets des deux plus puissants désinfectants et antiseptiques connus, les acides carbolique et sulphureux. Ce sont les agents les plus efficaces et les meilleur marché pour tous usages sanitaires. Commodes à employer, et ne contenant nul ingrédient nuisible.

SAVON DÉSINFECTANT À L'ACIDE CARBOLIQUE

DE McDOUGALL

(qualités blanches et foncées),

Pour la toilette, nettoyer et désinfecter, et détruisant les insectes, sans substance vénéneuse dans sa composition.

ACIDE CARBOLIQUE DE McDOUGALL,

De différentes qualités

Pour usages de désinfection, médicaux et de fabriques.

ENGRAIS DE McDOUGALL.

Pour les plantations de betterave à sucre, café, tabac, thé, etc.

APPAREILS DE PANSEMENT NON-VÉNÉNEUX POUR

MOUTONS ET BÊTES À CORNES DE McDOUGALL,

Détruisant les insectes qui infestent les animaux, et cicatrisant les maladies cutanées.

SUBSTITUT PHOSPHATIQUE DE LA LEVURE DE

BIÈRE, ET FARINE LEVANT D'ELLE-MÊME,

DE McDOUGALL,

Pour la confection de Pain et Pâtisserie de toutes sortes, sans fermentation.

Acide Pierique, Peroxide Hydraté de Fer, Hyposulphite de Soude, Phosphate de Soude, Moëlle de Corne Préparées, etc.

Produits Chimiques et Salaisons.

SAVORY & MOORE, *Chemists to the Queen, the Prince of Wales, the Emperor Napoleon III.,*
143 New Bond-street, London, w.

*Prize Medals at the International Exhibition
of 1851 and 1862.*

Specimens of Pancreatic Emulsions of solid fat, cod-liver oil, and lard oil, the new remedies for consumption.

Datura Tatula Extract, also cigars, cigarettes and tobacco of the same, for employment in the treatment of asthma.

Gelatine discs impregnated with drugs (Atropine, Calabar bean extract, &c.), for use in ophthalmic surgery.

A variety of chemical specimens and preparations of the British Pharmacopœia.

A pair of improved medical field panniers, a military medicine chest, and a medical field companion, designed by SAVORY & MOORE, and adopted by the Director-General of the Army Medical Department for the use of Her Majesty's Forces.

*Médaille à l'Exposition Internationale de 1851
and 1862.*

Spécimens d'Émulsions Pancréatiques de graisse solide, huile de foie de morue et huile de saindoux; les nouveaux remèdes pour la consommation.

Extrait de Datura Tatula; cigars, cigarettes et tabac de la même, pour l'emploi dans le traitement de l'asthme.

Discs gélatineux imprégnés de drogues (Atropine, extrait de fève de Calabar, etc.), pour l'usage de la chirurgie ophthalmique.

Plusieurs spécimens chimiques et préparations de la Pharmacopée Britannique.

Une paire de cacolets de campagne perfectionnés; une caisse à médicaments, militaire; et une trousse de campagne de l'invention de SAVORY & MOORE, et adoptée par le Directeur-Général du Département Médicale pour l'usage de l'Armée Anglaise.

SCHWEITZER, H., & CO.

Analytical Chemists, and Sole Manufacturers of Cacoatina, &c.,

Pharmaciens Analystes, et seuls Fabricants de Cacaotine, etc.

Cocoatina or antidyspeptic cocoa will bear the strictest chemical investigation. It is a pure preparation of the finest Caragua beans deprived of the excess of fatty matter and retaining the *natural delicate* flavour of the bean.

Cocoatina is largely recommended by the Faculty, and meets with universal approbation.

Large quantities of butter of cocoa being produced in the manufacture of cocoatina, H. S. & Co. are enabled to compete both in price and quality with the finest introduced from the continent.

The suppositories, &c., exhibited in their case (prepared with the cocoa butter) have been highly spoken of, and are of the best make.

Cocoatina is sold in packages at 1s. 6d., 3s., 5s. 6d., 10s. 6d., 20s. each.

Trade Lists on application.

La cacoatine ou cacao antidyspeptique soutiendra avec succès l'analyse chimique la plus rigoureuse. Elle est une préparation parfaitement pure des fèves de cacao de Caracas les plus fines, débarrassées de l'excès de matière grasse, et conservant l'arôme naturel si délicat qui les caractérise.

La cacoatine est fréquemment recommandée par la Faculté, et reçoit l'approbation générale.

Produisant de larges quantités de beurre de cacao dans la fabrication de leur cacoatine, H. S. ET C^{IE}. peuvent soutenir la concurrence pour cet article tant sous le rapport du prix que sous celui de la meilleure façon.

Les suppositoires, etc., exposés dans leur vitrine (préparés au beurre de cacao) ont reçu les plus grands éloges, et sont de la meilleure façon.

La cacoatine se vend en paquets de 1 fr. 90, 3 fr. 75, 6 fr. 90, 13 fr. et 25 fr. chaque.

Prix-courants du commerce sur demande.

CLASS XLVI.

EVANS, PARKER & SPARKE, & CO., *Avonside Tannery, Bristol.*

- 1st. British army sole leather.
 2ndly. Engine backs, for colliery pumps, &c.
 3rdly. Ordinary sole leather.

P. & S. EVANS & Co. direct especial attention to their Sole Leather, to the manufacture of which they bring many years' experience.

A very large proportion of their No. 1 leather is annually used by the British Government.

Prices during the past year, of No. 1	d.	d.

Caoutchouc- und Guttapercha-Riemen und Röhren.

Agenten in Hamburgh—Die Herren MONNINGTON & Co.; *Amsterdam*—Die Herren LANDRÉ & GLINDERMAN; *London Comptoir*—11 Leadenhall-street, E.C.

Preislisten werden auf Verlangen in der Fabrik oder an unserem Ausstellungsplatze, Classe 46, Gruppe V., der Pariser Ausstellung abgegeben.

Le bande sono stirate da meccanismi potenti e scelte accuratamente per esportazione a tutti i climi.

Bande e tubi di gommelastica e gutta-perca.

Agenti ad Amburgo—Messrs. W. MONNINGTON E CIA.; *Amsterdam*—LANDRÉ E GLINDERMAN; *Ufficio in Londra*—No. 11 Leadenhall-street, E.C.

Prezzi correnti a richiesta alla fabbrica o all' Esposizione a Parigi, Classe 46, Gruppo V.

GROUP VI.—CLASS XLVII.

JONES & LEVICK'S PATENT COAL-CUTTING
MACHINE

Is constituted to work, or 'hole,' the coal at any angle, from the horizontal to the vertical, and of driving headings. It is simple and substantial in its construction, and does not easily get out of order. It has worked in very hard coal at the rate of twelve yards an hour. It is worked by compressed air, the exhaust of which assists ventilation, and cools the mine.

Agent in Paris, Mons. A. Maire, Ingénieur, 19 Boulevard Malesherbes; for Germany, Messrs. Barbe, Son, & Co., Nancy; in London, Fred. Levick & Co., 4 Charlotte-row, E.C.

MACHINE À COUPER LA HOUILLE, BREVETÉE,
DE JONES & LEVICK

est construite pour travailler, ou 'perforer,' la houille à tout angle, de l'horizontal au vertical, à l'effet de pratiquer des galeries. Sa construction est à la fois simple et solide, et elle ne se dérange que difficilement. Elle a fonctionné dans de la houille très-dure à raison de douze yards (10,98 m.) par heure. Enfin elle est mue par l'air comprimé, dont l'épuisement aide la ventilation et rafraîchit la mine.

Agent à Paris, M. Maire, Ingénieur, 19 Boulevard Malesherbes; pour l'Allemagne, MM. Barbe, Fils, et Cie., à Nancy; à Londres, Fred. Levick et Cie., 4 Charlotte-row, E.C.

Pick in position for Holeing—*Pic en position pour perforer*—Spitzhammer in Position zum Bohren—*Piccone in posizione per traforare*.

Vertical Cut downwards—*Coupe verticale de haut en bas*.
Verticaler Schlag niederwärts—*Per Taglio perpendicolare*.

JONES & LEVICK'S
PATENTIRTE KOHLENHAU-
MASCHINE

ist dazu bestimmt, die Kohle auf irgend einen Winkel, vom horizontalen bis zum verticalen, zu arbeiten, oder 'zu bohren,' und zum Treiben von Stollen. Sie ist einfach und compact in ihrer Construction und gerathet nicht leicht in Unordnung. Sie hat in sehr harter Kohle in dem Verhältniss von zwölf Yard per Stunde gearbeitet. Sie ist durch compressirte Luft getrieben, deren Entleerung die Ventilation befördert und die Grube kühl macht.

Agent in Paris: Herr A. Maire, Ingenieur, 19 Boulevard Malesherbes; für Deutschland: Herren Barbe, Sohn & Co., Nancy; in London: Fred. Levick & Co., 4 Charlotte-row, E.C.

MACCHINA TAGLIA CARBON FOSSILE
(PATENTATA)

è costruita in modo da operare, o 'traforare,' il carbon fossile a qualunque angolo,

dall' orizzontale al verticale, e penetrare le testate. E semplice e solida nella costruzione, e non si guasta facilmente. Ha operato su carbon fossili durissimi in ragione di dodici yarde all' ora. Agisce ad aria compressa, l' esaurimento della quale aiuta la ventilazione, e raffresca la miniera.

Agente in Parigi, M. A. Maire, Ingegnere, 19 Boulevard Malesherbes; pella Germania, Sgri. Barbe, Figlio & Cia., Nancy; in Londra, Fred. Levick & Cia., 4 Charlotte-row, E.C.

JONES & LEVICK'S PATENT AIR-COMPRESSING ENGINE

Has the advantage of simplicity of construction with small cost, of the small amount of power to overcome the friction of its moving parts, and is not affected by the production of heat in compressing the air. It acts as a regulator, adapting its speed to the consumption of air underground. It occupies but a small space, and needs only a slight foundation.

Agent in Paris, Mons. A. Maire, Ingénieur, 19 Boulevard Malesherbes; for Germany, Messrs. Barbe, Son, & Co., Nancy; in London, Fred. Levick & Co., 4 Charlotte-row, E.C.

MACHINE A COMPRIMER L'AIR, BREVETÉE,
DE JONES ET LEVICK

combine l'avantage de la simplicité dans sa construction avec celui du bon marché, n'a besoin que d'une faible somme de force motrice pour vaincre le frottement de ses pièces mouvantes, et n'est point affectée par la production de la chaleur en comprimant l'air. Elle agit aussi comme régulateur, adaptant la rapidité de sa marche à la consommation d'air sous terre. Enfin elle n'occupe que peu de place, et n'a besoin que d'une légère fondation.

Agent à Paris, M. Maire, Ingénieur, 19 Boulevard Malesherbes; pour l'Allemagne, MM. Barbe, Fils, et Cie., à Nancy; à Londres, Fred. Levick et Cie., 4 Charlotte-row, E.C.

JONES & LEVICK'S LUFT-COMPRESSIONS-
MASCHINE

hat den Vortheil der Einfachheit der Construction, mit weniger Auslage, der geringen Dampfkraft, um die Reibung der bewegenden Theile derselben zu überwinden, und die Erzeugung von Hitze bei der Compression der Luft wirkt nicht auf dieselbe ein. Sie wirkt wie ein Regulator, indem sie ihre Schnelligkeit dem unterirdischen Verbräuche der Luft anpasst. Sie nimmt nur wenig Platz ein und braucht bloss ein leichtes Fundament.

Agent in Paris, Mons. A. Maire, Ingénieur, 19 Boulevard Malesherbes; in Deutschland, Messrs. Barbe, Sohn & Co., Nancy; in London, Fred. Levick & Co., 4 Charlotte-row, E.C.

MACCHINA PER COMPRIMER L'ARIA
(PATENTATA)

ha il vantaggio della semplicità di costruzione con tenue spesa, quello della piccola quantità di forza necessaria per superare l'attrito delle sue parti moventi, e non risente alcun effetto dallo sviluppo del calorico nel comprimere l'aria. Agisce come regolatore, adattando la propria celerità al consumo dell'aria sotterra. Non occupa che un piccolo spazio, e non abbisogna che di leggera fondamenta.

Agente in Parigi, M. A. Maire, Ingegnere, 19 Boulevard Malesherbes; in Germania, Sigri. Barbe, figlio e Cia., Nancy; in Londra, Federico Levick e Cia., 4 Charlotte-row, E.C.

CLASS XLVIII.

BILLANCOURT AGRICULTURAL EXHIBITION.

The Exhibition on the Island of Billancourt has been organised for the purpose of showing various agricultural operations which could not be carried on within the limits of the Champ de Mars. The following is a general outline. Examples of operations at farm-homesteads, such as thrashing; preparation of food for animals; manufacture of agricultural produce, as cheese, butter, sugar; distillation. Examples of field-culture, as ploughing, drilling, hoeing crops, reaping, harvesting. Examples of drainage, growth of various crops, arboriculture, vine-culture, &c.

These processes will be shown daily or periodically during the entire time the Exhibition is open. In addition to these, however, special competitions and trials of agricultural machines are fixed to take place, for the purpose of enabling the Juries to make their awards. Ordinary implements will be worked on the Island of Billancourt and the adjoining Island of Seguin. Steam-ploughs at the Imperial Farm at Vincennes (about 2 miles from Paris). Reaping and mowing-machines at the Imperial Farm at Fougilleuse (about $3\frac{1}{2}$ miles from Paris).

Programme.

APRIL.

1st Fortnight.—Ploughs of all kinds, hydraulic machines, steam engines.

2nd Fortnight.—Steam ploughs, harrows, rollers, weeding machines, scarifiers, and apparatus for the preparation of clay and the manufacture of drainage pipes.

MAY.

1st Fortnight.—Drills and manure distributors, hemp and flax machines, vehicles, harness, weighing machines, churns, and dairy utensils.

2nd Fortnight.—Mowing, raking, hay-making machines, and other apparatus intended for hay-harvesting purposes, as well as for trussing, compressing, and preserving hay.

JUNE.

1st Fortnight.—Competitive trials of farriery, and examination of specimens of agricultural establishments.

2nd Fortnight.—Chaff-cutting and root-cutting machines, horse hoes, moulding ploughs (butteurs), mills.

JULY.

1st Fortnight.—Shearing apparatus.

2nd Fortnight.—Reaping machines and cereal harvesting apparatus.

AUGUST.

1st Fortnight.—Thrashing machines, and apparatus for winnowing and preserving grain.

2nd Fortnight.—Portable ovens, apparatus for cooking vegetables, steeping linen, and manufacturing manure.

SEPTEMBER AND OCTOBER.

Examination of specimens of various agricultural products and processes.

EXHIBITION OF LIVE STOCK.

Exhibitions of Live-Stock (divided into 14 categories) will be held fortnightly, the same as the trials of implements. British cattle, sheep, and pigs, however, cannot be admitted, in consequence of the cattle plague.

Horses and poultry and dogs will be received.

Programme.

APRIL.

1st Fortnight.—Sheep for the meat market—Breeding animals.

2nd Fortnight.—Fat stock.

MAY.

1st Fortnight.—Breeds suitable for dairy purposes—Breeding animals.

2nd Fortnight.—Sheep of breeds for the production of wool—Breeding animals.

JUNE.

1st Fortnight.—Draft horses.

2nd Fortnight.—Poultry.

JULY.

1st Fortnight.—Draft cattle. (Races Bovines de travail)—Breeding animals.

2nd Fortnight.—Saddle and carriage horses, hunters, ponies, &c.

AUGUST.

1st Fortnight.—Dogs.

2nd Fortnight.—Yoke oxen. (These must be sent in pairs, and trained either to the yoke or

to the collar. Special trials will be held for the purpose of testing their aptitude for work.)

SEPTEMBER.

1st Fortnight.—Pigs—Breeding animals.

2nd Fortnight.—Asses, mules, and animals of the mule species.

OCTOBER.

1st Fortnight.—Fat stock.

2nd Fortnight.—Different animals which have been, or might be, acclimatised.

The organisation of the agricultural portion of the Universal Exhibition, both at the Champ de Mars and at Billancourt, has been carried out under the advice of the following commission :—

MM. le Comte DE SAINT-LÉGER (Albert), *Président*; DUCLOS, *Vice-Président*; DU PRE (Belgique), *VicePrésident*; Beckwith (Etats-Unis d'Amérique); de Behr; Borie (V.); Brandreth Gibbs (Angleterre); Decauville; Giordano (Italie); Hüffer (Prusse); Lesage; Magne; Pluchet; Prillieux; Tisserand; Trouseau (G.); Van den Broeck (Pays-Bas); LE PLAY (Albert), *Secrétaire*.

The British portion has been entrusted to the direction of MR. BRANDRETH GIBBS.

LIST OF BRITISH EXHIBITORS.

ASHBY & JEFFERY, Stamford, Lincolnshire
ATMOSPHERIC CHURN COMPANY, 119 New Bond-street, London

ALLEN, E. E., 40 Parliament-street, Westminster
AMIES, BARFORD & Co., Peterborough, Northamptonshire
BARROWS & CARMICHAEL, Banbury, Oxfordshire
BAWDEN, PETER, 49 Norland-square, Nottinghill, London
BRIGHAM & BICKERTON, Berwick-on-Tweed
BEVERLEY IRON AND WAGGON COMPANY (Limited), Beverley, Yorkshire
BENTALL, E. H., Heybridge-works, Maldon, Essex
BRABY, JAMES & SON, 42 Newington-causeway, London
BOWER, GEO., London, and St. Neots
CLAYTON, SHUTTLEWORTH & Co., Lincoln
COLEMAN & MORTON, Chelmsford, Essex
CLAYTON, HENRY & Co., Woodfield-road, Harrow-road, London
DEAN, JOHN, Woodstock, Oxfordshire
DELL, W. R., 72 Mark-lane, London
GARRETT, R. & SONS, Leiston-works, Suffolk
GREEN, THOMAS & SON, Leeds and London
HOWARD, J. & F., Bedford
HAYES & SON, Stamford
JAMES, ISAAC, Cheltenham
MARSHALL, SONS & Co. (Limited), Gainsboro'
NICHOLSON, WM. N., Newark
PICKSLEY, SIMS & Co., Leigh, near Manchester
PENNEY & Co., 16 Broadgate, Lincoln
RANSOMES & SIMS, Orwell-works, Ipswich
ROBEY & Co. (Limited), Lincoln
RUSTON, PROCTOR & Co., Lincoln
RICHES & WATTS, Norwich
SHANKS, ALEXANDER & SON, Dens Iron-works, Arbroath
SMYTH, JAMES & SONS, Peasenhall, Suffolk
SAMUELSON & Co., Banbury
THOMSON, R. W., 3 Moray-place, Edinburgh

ASHBY & JEFFERY, Rutland-terrace Iron Works, Stamford, England.

Hay Machines, Horserakes, Steam Engines, Thrashing Machines, Chaff Cutters, &c.

HAYMAKERS.—ASHBY & JEFFERY'S patent haymaker is one of the most useful machines in the world. One of these machines will do as much work as 20 labourers.

ASHBY AND JEFFERY'S haymaker has taken the highest prize of 5*l.* by the Royal Agricultural Society of England, *five times*; of the Royal Society of Ireland, *five times*; of the Royal Society of Scotland, *four times*; the highest prize Grand Gold Medal by the French Government at Paris, 1860; numerous other prizes in France, England, Belgium, Holland, and Austria; also at the Great Exhibitions of London, Paris, Vienna, Hamburg, and Dublin—altogether 78 prizes have been awarded to this Haymaker.

PRICES.

	£	s.
No. 5. The York Haymaker, 7ft. wide .	10	10
„ 8. The Albert Haymaker, 7ft. wide .	12	12
„ 7. The Victoria Haymaker, 7ft. 6in.	13	13
„ 6. The Palmerston Haymaker, 8ft.	14	14

All have the reversing motion. Wire screens for Nos. 5, 7, and 8, 12*s.* 6*d.* each; No. 6, 15*s.*

HORSE RAKES.—ASHBY & JEFFERY'S patent horserake has taken 38 prizes and medals.

Price, 7*l.* 10*s.*, 8*l.* and 8*l.* 5*s.*; if with seat 30*s.* extra.

STEEL HAND RAKES ON WHEELS, on the principle of the horserake, price 2*l.*

SMALL PORTABLE STEAM ENGINES, specially adapted for small farms, very cheap and simple, and easily managed. Prices, 2½-horse power, 86*l.*; 3-horse, 96*l.*; 4-horse, 128*l.*; 5-horse, 140*l.*

COMBINED THRASHING MACHINES suitable for small farmers, price 45*l.*, 50*l.*, and 55*l.*

CHAFF CUTTERS.—New Machines on wrought-iron frame and legs, very easy to work, and very cheap. Price: 3*l.* 17*s.* 6*d.*, 4*l.* 17*s.* 6*d.*, and 11*l.* 11*s.*

STONE FLOUR MILLS, to grind corn, maize, &c. for cattle. Price 23*l.*

ONE HORSE GEAR WORKS, with intermediate motion included. Price 9*l.* 9*s.*

FANEUSES.—La faneuse, brevetée, de ASHBY ET JEFFERY est une des machines les plus utiles qui existent au monde pour économiser du travail dans la récolte des foin; une de ces machines fera autant d'ouvrage que 20 ouvriers, et d'une façon beaucoup plus efficace; le foin étant fait plus rapidement est de meilleure qualité.

LA FANEUSE de ASHBY ET JEFFERY a remporté le plus haut prix—5 livres—de la Société Royale d'Agriculture d'Angleterre, *cinq fois*; de la Société Royale d'Irlande, *cinq fois*; de la Société Royale d'Ecosse, *quatre fois*; le plus haut prix du Gouvernement Français—la Grande Mé-

daille en Or—en 1860; de nombreux autres prix en France, Angleterre, Belgique, Hollande et Autriche; ainsi qu'aux Grandes Expositions de Londres, Paris, Vienne, Hambourg, et Dublin—en un mot, 78 prix remportés attestent le mérite de cette Faneuse.

PRIX.

Frs. Ces.

No. 5. La Faneuse York . . .	262	50
„ 8. La Faneuse Albert . . .	315	0
„ 7. La Faneuse Victoria . . .	341	25
„ 6. La Faneuse Palmerston . . .	367	50

Toutes ont le mouvement en sens inverse. Écrans en fil métallique pour les Nos. 5, 7 et 8, 15 frs. 65 c. chaque; No. 6, 18 frs. 75 c.

RÂTEAUX À CHEVAL.—Le râteau à cheval, breveté, de ASHBY ET JEFFERY, a remporté 38 prix et médailles.

Prix 187 frs. 50 c.; 200 frs. et 206 frs. 25 c.; avec siège, 37 frs. 50 c. extra.

RÂTEAUX À MAIN EN ACIER, sur roues, d'après le principe du râteau à cheval; prix, 50 frs.

PETITES MACHINES À VAPEUR LOCOMOBILES, spécialement adaptées à l'usage des fermes de peu d'étendue, très-bon marché et très-simples, Prix: de 2½ chevaux, 2,150 frs.; de 3 chevaux, 2,400 frs.; de 4 chevaux, 3,200 frs.; de 5 chevaux, 3,500 frs.

MACHINES À BATTRE, combinant battage, criblage, convenant aux petits fermiers, prix, 1,125 frs.; avec godets d'élévation, 125 frs. extra.

HACHE-PAILLES.—Nouvelles machines sur charpente et pieds en fer forgé, très-facile à manœuvrer, et très-bon marché. Prix: 96 frs. 90 c.; 121 frs. 90 c.; 264 frs.

MOULINS À FARINES À MEULE, pour moudre le grain, le maïs, etc., pour les bestiaux. Prix, 575 frs.

MANÈGE À UN CHEVAL, mouvement intermédiaire compris. Prix, 256 frs. 25 c.

Catalogues in French or German free on application.

THE BEVERLEY IRON & WAGGON COMPANY (LIMITED), *Beverley, Yorkshire, England.*

Patent Reaping Machine, with Double Self-Acting Swathe-Delivery.

Machine à Moissonner, Brevetée, avec double 'self-acting' système à Délivrer les Andains.

Awarded the First Prize by the Royal Agricultural Society of England, 1861 (it took less draught and cut one-third more Corn than any other with which it competed), and by the Yorkshire Agricultural Society, 1866.

The horses follow the machine, and propel it by means of a pair of shafts, to the end of which they are harnessed by common plough whippetrees. The horses soon become accustomed to follow the machine, and will do so readily when they feel it yield to their efforts. The man walks behind them to steer, and owing to the length of the shafts, he has perfect command over the machine, and can easily guide it in any direction. The power is exercised directly upon the work; and the disadvantages of the side-draught used in all other reapers yet brought before the public, are entirely avoided.

A remporté le Premier Prix de la Société Royale d'Agriculture d'Angleterre, 1861 (elle exigea moins de tirage et coupa un tiers de plus de grain que toute autre machine de cette nature avec laquelle elle concourait), et de la Société d'Agriculture du Yorkshire, 1866.

Les chevaux suivent la machine, et la font mouvoir au moyen d'une paire de brancards, à l'extrémité desquels ils sont attelés par un palonnier de charrue ordinaire. Ils s'habituent bientôt à suivre la machine, et le feront sans difficulté quand ils sentiront qu'elle cède à leurs efforts. Le conducteur marche derrière pour la manœuvrer, et possédant, grâce à la longueur des brancards, un contrôle parfait sur elle, il peut la guider facilement dans toutes les directions. La puissance est ainsi directement appliquée au travail à exécuter, et les inconvénients du tirage de côté, usité dans toutes les autres moissonneuses présentées jusqu'à ce jour au public, sont entièrement évités.

This machine will pass complete through almost any gateway, commence cutting without having a path prepared, and deliver on either side, which enables it to work both up and down the same side of, or all round the crop, as circumstances may require. It is very compact, and particularly adapted for large farmers, as it will cut with ease from 20 to 30 acres per day.

It has been extensively used with the greatest success by many leading agriculturists for six seasons, and has had several important improvements added during the harvest of 1866.

Price of the three-horse reaping machine, to cut 7 ft. 6 in. wide, with two complete knives, six spare cutters, screw keys, &c., 42l.; and of the smaller machine, to be worked by two horses, to cut 5 ft. 2 in. wide, 37l.

Cette machine passera, complètement équipée, par presque toute entrée, commencera à couper sans avoir un chemin préparé, et délivrera des deux côtés, ce qui lui permet de travailler également en montant et en descendant sur un même côté, ou tout autour, de la récolte, selon que les circonstances peuvent le demander. Elle est très-compacte, et convient particulièrement aux besoins des grands fermiers, attendu qu'elle moissonnera facilement de 8 à 12 hect. par jour.

Cette moissonneuse a été largement employée, avec le plus grand succès, par nombre des principaux agriculteurs durant six saisons, et a eu l'addition de plusieurs perfectionnements importants durant la moisson de 1866.

Prix de la machine à moissonner à trois chevaux, de 7 pieds 6 pouces de coupe en largeur — 2 m. 29 c.—avec deux couteaux complets, six coupleurs de réchange, clefs à vis, etc., 1,060 frs.; et pour deux chevaux, de 5 pieds 2 pouces — 1 m. 58 c.—de coupe en largeur, 925 frs.

London, Wien, Pesth.—Champ de Mars, Paris; Ile de Billancourt.

IMPROVED TRACTION ENGINES.

The above engraving represents one of C., S., & Co.'s Traction Engines, which have been designed for driving machines of any kind that have frequently to be moved from place to place, in order to render them independent of horses for transport. These traction engines can propel themselves over any ordinary road, with a full set of steam ploughing tackle, a thrashing machine and straw elevator, or other portable machinery attached.

In arsenals, dockyards, mining and timber districts, they will be found especially useful for drawing heavy loads.

MACHINES À VAPEUR AUTOMOBILES PERFECTIONNÉES.

La planche ci-dessus représente une des automobiles de C., S. et Cie., construite pour faire marcher et remorquer les machines de toutes sortes qu'on est obligé de faire voyager fréquemment d'un lieu à l'autre, et les affranchir ainsi du besoin de chevaux pour leur transport. Ces automobiles, peuvent se mouvoir sur toute route ordinaire, en ayant à leur remorque tout un attirail de charrue à vapeur, une machine à battre avec son élèveur à paille, ou toute autre machine portative.

On les trouvera spécialement utiles pour traîner de lourdes charges dans les arsenaux de marine et autres, ainsi que dans les districts où sont exploitées des mines et des forêts.

VERBESSERTE STRASSEN-LOCOMOTIVE.

Der obige Holzschnitt stellt eine von C., S. & Co.'s Strassen-Locomotiven dar, welche bestimmt sind, Maschinen irgend welcher Art zu treiben, welche häufig von Ort zu Ort transportirt werden müssen, und sie unabhängig von Pferden für ihren Transport zu machen. Diese Strassen-Locomotiven laufen auf irgend einer gewöhnlichen Fahrstrasse, mit angehängtem vollen Satz von Dampfpflügergeräthschaften, einer Dreschmaschine und Strohelevator oder anderer dazu gehörenden Maschinerie.

In Arsenalen, Schiffswerften, Bergbau- und Wald-Districten werden sie besonders nützlich für das Fortschaffen von schweren Lasten gefunden werden.

MOTORI A TRAZIONE PERFEZIONATI.

L' incisione rappresenta uno dei Motori a Trazione di C., S. e Cia. immaginati per tirare macchine di qualsiasi specie che si debbano frequentemente muovere da un luogo all' altro acciò renderle indipendenti dai cavalli pel trasporto. Questi motori a trazione possono impellere se stessi su qualunque strada ordinaria con un fornimento completo di attrazzi aratori a vapore, trebbiatori e solleva-paglia, ed altri meccanismi portatili attaccati.

Negli arsenali, cantieri, in località di miniere, di legname grosso, riusciranno specialmente utili per tirare cariche gravi.

**PORTABLE STEAM ENGINES, from
4 to 30 horse-power.**

For driving agricultural and other portable or fixed machinery these engines are now in general use in all parts of the world: C., S. & Co. having sold upwards of 7,500 engines, about half of which large number have been sent to the colonies and various continental countries.

For prices, delivered at shipping ports, see below. Further particulars on application to their representatives at the Exhibition, or to any of their establishments, as above, by letter.

LOCOMOBILES À VAPEUR, de 4 à 30 chevaux.

Ces machines sont maintenant d'un usage général dans toutes les parties du monde pour faire marcher tous instruments de travail, agricoles et autres, portatifs ou fixes: C., S. & Cie. ayant déjà vendu plus de 7,500 des dites machines, et expédié environ la moitié de cette large quantité dans les colonies et divers pays du continent. Pour les prix, délivré aux ports d'expédition, voir ci-dessous. Pour plus amples détails s'adresser à leurs représentants à l'Exposition, ou à n'importe lequel de leurs établissements, comme ci-dessus, par lettre.

**LOCOMOBILE DAMPFMASCHINE, von 4 bis
30 Pferdekraft.**

Diese Dampfmachines werden nun in allen Theilen der Welt zum Treiben von Agricultur- und anderer transportablen oder stehenden Maschinerie allgemein gebraucht; C., S. & Co. haben über 7,500 Dampfmachines verkauft,

von welchen ungefähr die Hälfte dieser grossen Anzahl nach den Colonien oder verschiedenen Continentalstaaten gesandt worden ist. Für Preise, geliefert am Verschiffungshafen, siehe unten. Nähere Einzelheiten auf gefällige Anfrage bei unsern Repräsentanten auf der Ausstellung oder brieflich bei irgend einem unserer Häuser, wie oben.

**MOTORI À VAPORE PORTATILI, della forza da
4 a 30 cavalli.**

Per attivare meccanismi agrari ed altri siano portatili o fissi questi motori sono ora in uso generale in tutte le parti del mondo, avendo la ditta C., S. & Cie. venduti già meglio che 7,500 motori, del qual gran numero metà circa furono spedite alle colonie ed altri paesi continentali. Per prezzi alla consegna al porto d'imbarco vedasi qui appiè. Per ulteriori particolari rivolgersi con lettera ai loro rappresentanti all'Esposizione o a qualunque dei loro stabilimenti sopra indicati.

FIXED HORIZONTAL STEAM ENGINES AND
 CORNISH BOILERS.

The principle of these Engines is direct action; the whole arrangement is the simplest possible; the working parts being fewer in number, more compact, and less likely to get out of order than in any other class of stationary engine.

The boilers are of improved design, best material and workmanship, and are constructed so as to conform to the laws of the country where they will be worked. In cases where economy of fuel is an object, the engine can be fitted with expansion valves, and feed-water heaters, which are not included in the prices quoted below.

MACHINES À VAPEUR HORIZONTALES FIXES
 AVEC CHAUDIÈRES DE CORNWALL.

Le principe de construction de ces Machines est celui de l'action directe; la disposition entière en est des plus simples, les pièces qui fonctionnent étant en plus petit nombre, plus compactes, et par conséquent offrant moins de probabilités de dérangement que dans toute autre classe de machine stationnaire.

Les chaudières sont construites d'après un système perfectionné, et combinent l'emploi de la matière première la meilleure avec l'excellence de la main d'œuvre; cette construction permet, en outre, de se conformer aux lois du pays dans lequel elles sont destinées à fonctionner. Enfin, dans les circonstances où l'économie de combustible est un objet important, cette machine peut être munie de tiroir à expansion et de chauffeur d'eau, qui ne sont pas compris dans les prix cotés ci-dessous.

STABILE HORIZONTALE DAMPFMASCHINEN UND
 CORNWALLISCHE DAMPFKESSEL.

Das Princip dieser Dampfmachines ist directe Wirkung; die ganze Anordnung ist die einfachste, welche möglich ist; die bewegenden Theile sind weniger in Zahl, compacter und gerathen nicht so leicht in Unordnung, als die irgend einer anderen Klasse von stehenden Dampfmachines.

Die Dampfkessel sind von verbessertem Entwurf, bestem Material und bester Arbeit und sind den Gesetzen des Landes gemäss construirt, wo sie in Thätigkeit kommen sollen. In Fällen, wo Ersparniss von Feuerung bezweckt werden soll, kann die Dampfmachine mit Expansions-Schiebern und Wasservorwärmern versehen werden, welche nicht in den unten angegebenen Preisen eingeschlossen sind.

MOTORE A VAPORE FISSO ORIZZONTALE E
 CALDAIE AD USO DI CORNWALL.

Il principio di questi Motori è l'azione diretta; tutta la disposizione è la più semplice possibile; le parti operanti essendo minori in numero, più compatte, e meno suscettibili ad inconvenienti che in qualsiasi altra classe di motori fissi.

Le caldaie sono di un sistema perfezionato, del miglior materiale ed esecuzione, e costrutte così che si conformino alle leggi del paese in cui devono adoperarsi. Nei casi in cui l'economia del combustibile sia d'importanza, il motore può essere fornito di valvole espansive, e di riscaldatori d'acque immescenti, i quali non sono inclusi nei prezzi appiè indicati.

Prices of Engines with cylindrical Cornish boilers and piping, complete.
Prix des Machines avec Chaudières de Cornwall et Tuyaux, complètes.

PORTABLE COMBINED DOUBLE BLAST THRASHING AND FINISHING MACHINE.
 No. 2B.

For thrashing almost all kinds of agricultural produce, C., S., & Co.'s Machines are now in general use in all parts of the world, over 6,000 having been already sold.

The Machines are made in two sizes; the large, suitable for being driven by an 8-horse-power engine, and the small by one of 6 horse-power. For prices, delivered at shipping port, see below. Further particulars on application to their representatives at the Exhibition or to any of their establishments, as above, by letter.

MACHINE LOCOMOBILE À BATTRE ET À NETTOYER, COMBINÉE, À DOUBLE VENTILATEUR.
 No. 2B.

Les machines à battre presque toutes espèces de produits agricoles de C., S., et Cie, sont maintenant d'un usage général dans toutes les parties du monde, plus de 6,000 de ces machines s'étant déjà vendues.

Elles sont de deux grandeurs; la plus grande peut être mue par une machine à vapeur de 8 chevaux, et la plus petite par une de 6 chevaux. Pour prix, délivré aux ports d'expédition, voir ci-dessous. Pour plus amples détails, s'adresser à leurs représentants à l'Exposition ou à n'importe lequel de leurs établissements, comme ci-dessus, par lettre.

TRANSPORTABLE COMBINIRTE DRESCH- UND REINIGUNGS-MASCHINE MIT DOPPELTEM GEBLÄSE.—No. 2B.

Die Maschinen von C., S. & Co. werden zum Dreschen von fast allen Getreidearten ganz allgemein gebraucht in allen Theilen der Welt; mehr als 6,000 sind bereits verkauft worden.

Die Maschinen werden in zwei Grössen gemacht; die grosse, um von einer Dampfmaschine von 8 Pferdekraft, die kleine, um von einer von 6 Pferdekraft getrieben zu werden. Für Preise, geliefert am Verschiffungshafen, siehe unten. Nähere Einzelheiten auf gefällige Anfrage bei ihren Repräsentanten auf der Ausstellung oder brieflich bei irgend einem ihrer Geschäftshäuser, wie oben.

MACCHINA PORTATILE COMBINATA CON TREBIATOIO A DOPPIO SOFFIO E MONDATOIO.
 No. 2B.

Le macchine dei Signori C., S., e Cia. per trebbiare qualunque specie di prodotto agrario sono ora in uso in tutte le parti del mondo, avendone essi vendute già più di 6,000.

Le macchine sono costruite di due grandezze: la grande attivabile da un motore della forza di 8 cavalli, e la piccola da uno della forza di 6 cavalli. Pei prezzi alla consegna al porto d'imbarco, vedasi qui appiè. Per ulteriori particolari rivolgersi con lettera, ai loro rappresentanti all'Esposizione o a qualunque dei loro stabilimenti sopraindicati.

HOWARD, JAMES & FREDERICK, *Britannia Iron Works, Bedford, England.*

Agricultural Engineers.

HOWARDS' STEAM PLOUGHING AND CULTIVATING APPARATUS ON THE SINGLE ENGINE SYSTEM.

This Apparatus is adapted for hilly as well as flat land, and for irregularly shaped as well as square fields. As the Engine and Windlass are stationary while in operation, the expense of carting water is often avoided by digging a pond or well at convenient points; and if set in an adjoining field, which is recommended when practicable, the whole field can be cultivated, headlands included,

without the engine being taken into it. As many as 40 or even 50 acres of land can be advantageously cultivated without any removal of the Engine or Windlass. From 7 to 10 acres a day can be broken up with an ordinary 8 or 10-horse Portable Engine. The Engine requires no alteration whatever, and is of course available for thrashing, &c., when not required on the land.

HOWARDS' STEAM PLOUGHING AND CULTIVATING APPARATUS ON THE DOUBLE ENGINE SYSTEM.

This Apparatus is adapted for Public Companies and large occupiers. Where the fields are large and square a greater breadth of land can be ploughed in a day by this arrangement than by any other, and less time is occupied in removing from field to field or place to place. The engines are equally well adapted for ploughing on the Single Engine system,

being fitted with two winding drums conveniently arranged upon the framework; the whole apparatus can be thus conveyed from field to field without the aid of horses, and the time occupied in setting down is reduced to less than one-half, while the first cost is little more than that of an ordinary self-propelling engine and a detached windlass.

More than 500 Steam Ploughs and Cultivators manufactured by J. & F. HOWARD are in use, and can be seen at work in almost every County of England. MESSRS. HOWARDS'

Steam Cultivated Farms, which may also be seen at any time, can be reached in an hour, by Midland Railway, from King's Cross, London.

HOWARD, JAMES & FREDERICK, *Britannia Iron Works, Bedford, England.*

Agricultural Engineers.

HOWARDS' CHAMPION PLOUGH

Has received Fifteen First Prizes from the Royal Agricultural Society of England, being the largest number of Prizes awarded to any kind of Plough ever exhibited.

More than 65,000 are in use.

HOWARDS' RIDGING PLOUGH

Received the only Prize ever offered by the Royal Agricultural Society of England for Ridging Ploughs.

Several thousands are in use.

HOWARDS' ZIGZAG HARROWS

Have received Sixteen First Prizes from the Royal Agricultural Society of England, being the largest number of Prizes awarded to any kind of Harrows ever exhibited.

More than 50,000 are in use.

HOWARDS' CHAIN OR FLEXIBLE HARROW

Received a High Commendation from the Royal Agricultural Society of England, no Prize being offered.

Several thousands are already in use, though only introduced in 1864.

HOWARDS' PATENT HORSE RAKE

Has received every First Prize offered by the Royal Agricultural Society of England for the last fifteen years.

More than 15,000 are in use.

HOWARDS' PATENT HAYMAKER

Has received every First Prize offered by the Royal Agricultural Society of England since it was introduced.

Several thousands are already in use, though only introduced in 1861.

HOWARD, JAMES & FREDERICK, *Britannia Iron Works, Bedford, England,*
Agricultural Engineers.

HOWARDS' CHAMPION PLOUGHS

Have won in less than Three Years

SIXTY-EIGHT ALL ENGLAND PRIZES,

And upwards of

FIFTEEN HUNDRED LOCAL PRIZES,

By far the largest number ever awarded to
any kind of Plough.

THE FOLLOWING PRIZES

Have also been awarded to

JAMES AND FREDERICK HOWARD,

Besides many others by

ENGLISH, SCOTCH, IRISH, CONTINENTAL,
COLONIAL, AND OTHER SOCIETIES.

By the

ROYAL AGRICULTURAL SOCIETY OF ENGLAND,

FORTY-FOUR FIRST PRIZES

For the

Best Ploughs for light land,

Best Ploughs for heavy land,

Best Ploughs for general purposes,

Best Ridging Ploughs, Best Subsoil Ploughs,

Best Harrows, Best Steam Harrows,

Best Horse Rakes,

Best Haymakers, and Best Horse Hoes;

Also the

GOLD MEDAL AND OTHER PRIZES,

For Steam Cultivating Machinery.

GREAT EXHIBITION OF ALL NATIONS, 1851.

The Prize Medal for Ploughs and
Horse Rakes.

PARIS UNIVERSAL EXHIBITION, 1855.

The Gold Medal of Honour for the Best
Ploughs, Best Harrows, and Best
Horse Rakes.

PARIS AGRICULTURAL EXHIBITION, 1856.

Seven First Prizes, and Eight Gold and Silver
Medals for the Best Ploughs, Best
Harrows, and Best Horse Rakes.

AUSTRIAN INTERNATIONAL EXHIBITION, 1857.

The Gold Medal of Honour for the
Best Ploughs.

HUNGARIAN INTERNATIONAL EXHIBITION, 1857.

The First Class Diploma for the Best Ploughs.

INTERNATIONAL EXHIBITION, 1862.

The Prize Medal for Ploughs, Harrows, Horse
Rakes, Haymakers, and Steam
Cultivating Apparatus.

HAMBURG INTERNATIONAL EXHIBITION, 1863.

The Gold Medal for the Best Ploughs,
Best Harrows, and Best Haymakers, and a
Prize of Forty Guineas
for Steam Cultivating Apparatus.

RUSSIAN INTERNATIONAL EXHIBITION, 1864.

The Large Gold Medal for the
Best Plough.

FRENCH INTERNATIONAL STEAM PLOUGHING MATCHES AT ROANNE AND MELUN, 1864.

Both First Prizes of 100*l.* and 60*l.*, and both
Gold Medals for Steam Cultivating and
Ploughing Apparatus.

PRUSSIAN INTERNATIONAL EXHIBITION, 1865.

The Prize Medal for the Best Ploughs
and Harrows.

DANISH INTERNATIONAL EXHIBITION, 1866.

The Prize Medal for the Best Ploughs
and Horse Rakes.

HOWARD, JAMES & FREDERICK, *Britannia Iron Works, Bedford, England.*

Agricultural Engineers.

HOWARDS' NEW PATENT SAFETY STEAM BOILER AND SUPERHEATER.

Patented in Great Britain, France, America, and other Countries.

J. & F. HOWARD have had their attention drawn to the subject of the construction of Steam Boilers by three primary considerations:

1.—The frequent loss of life and great destruction of property attending boiler explosions, the recurrence of which, with the ordinary type of boiler in use, neither expense nor precautions on the part of owners can altogether prevent.

2.—The difficulty, loss of time, and expense of repairing the ordinary Cornish boilers.

3.—The desirability and economy of using superheated steam at high pressure.

The following may be enumerated among the advantages of Howards' New Patent Boiler and Superheater:—

SAFETY—No Risk of Explosion.—The new boiler is built up of wrought-iron tubes, the bursting pressure of each of which is at least 2,000 pounds per square inch, and the whole of the steam pipes and connections are tested to a pressure of 500 pounds.

ECONOMY OF FUEL.—In getting up steam to the working pressure, only about one-fifth of the coal is required that is consumed by the ordinary Cornish boiler; for instance, in a 40-horse boiler steam can be raised to 80 pounds pressure in twenty minutes with 2 cwt. of coal, the actual consumption being only 84 lbs. A Gauntlett's Pyrometer placed in the flue leading to the chimney indicates 200 degrees lower temperature than with the Cornish boiler.

HIGH PRESSURE SUPERHEATED STEAM.—The upper parts of the tubes forming the steam space or reservoir, being exposed to the radiated heat of the heating chamber, and the current of heated gases being confined to the lower

part of the tubes containing the water by transverse screens, the steam may be superheated to any desired degree, and *priming*, an almost incurable evil, is entirely obviated.

CIRCULATION OF THE WATER.—Each tube has within it an internal one, rising up through the water space, dividing the water into annular and central columns. The current of heated gases impinging upon the tubes, causes the water in the outer spaces to rise to the top and flow down the inner tubes: in consequence, a most active circulation is kept up in every part of the boiler. Water containing a large percentage of lime may be used in the new boilers without producing incrustation or deposit.

SIMPLICITY OF PARTS AND DURABILITY.—*No joint or bolt is exposed to the action of the fire, and it has no rivets or seams in its construction.* The tubes are so arranged and fitted that each is free to expand and contract; and can be taken out, examined, and replaced in a quarter of an hour.

PORTABILITY, ECONOMY OF SPACE, AND FACILITY IN SETTING.—Three men are sufficient to move and fix the boiler in almost any position without pulley blocks or tackling, and the largest piece will pass through a common doorway. It can be packed in a very small compass for exportation, and can be transported on bad roads or through mountainous districts. When fixed, it occupies considerably less space than a Cornish boiler.

One of the new Patent Boilers and Superheaters has been selected by the Royal Commissioners for driving the machinery at the Paris Exhibition, and can be seen at work daily.

J. & F. HOWARD ARE PREPARED TO GRANT LICENSES TO MANUFACTURE, TO ENGINEERS OF STANDING.

MARSHALL, SONS, & CO. (LIMITED), *Britannia Iron Works, Gainsborough, England.*

(Paris Exhibition, Group VI. Class 48; also at Billancourt.)

Manufacturers of Portable Steam Engines, Vertical Steam Engines, Horizontal Fixed Engines, Sawing Machinery, Thrashing Machinery, Corn Mills, Oil Mills, Pumping Machinery, &c.

Awarded within the last three years twenty Gold, Silver, and Bronze Medals, with numerous other money prizes, including First Prize of 50l. for the best Thrashing Machine, Doncaster, 1865.

Catalogues free on application.

Fabricants de Machines à vapeur, Locomobiles, Machines Verticales, Machines Horizontales fixes, Machines à Battre, Scies mécaniques, Moulins à grain, Pompes centrifuges, etc.

Accordés pendant les trois dernières années vingt Médailles d'or et d'argent, avec nombreux prix en monnaie, y compris le Premier Prix de 50l. pour la meilleure machine à battre, à Doncaster, 1865.

Catalogues franco sur demande.

Fabricanten von Locomobilen, Verticalen Dampfmaschinen, Horizontalen Hochdruck-Maschinen, Dampfkesseln, Dampf-Dreschmaschinen, Sägen, Mühlen aller Grössen, Centrifugal-Pumpen etc.

Innerhalb drei Jahren zwanzig goldene und silberne Medaillen und den höchsten Geldpreis von 50l. für die beste Dampfdreschmaschine, zu Doncaster, 1865.

Cataloge auf gefällige Anfrage.

Fabbricanti di Motori Portatili, Motori Verticali, Motori Orizzontali Fissi, Trebbiatori, Seghe a Macchina, Mulini, Frantoi, Pompe Meccaniche, ecc.

Aggiudicatori di venti Medagli in Oro, Argento, e Bronzo entro gli tre anni, oltre numerosi premi in denaro, incluso il Primo Premio di 50l. pel miglior trebbiatoio a Doncaster, 1865.

Cataloghi gratis a richiesta.

PACKARD, EDWARD, & CO., 6 Prince's-street, Ipswich, and 60 Mark-lane, London.

Agricultural Chemists, and Manufacturers of Artificial Manures.

Obtained the ONLY Award in this Class at the International Exhibition, London, 1862.

EDWARD PACKARD & Co. were one of the first firms to commence the manufacture of Chemical Manures in Great Britain, and by the aid of chemistry and machinery they have been enabled to produce superphosphate of the highest quality, at the lowest possible cost, which they can supply on best terms, to manufacturers and others.

They are also actively engaged in the production of phosphates from the various deposits of England and other countries, and are therefore able to supply consumers at moderate prices.

Their manufactories are conveniently situated for rail and water communication, and shipping is easily obtainable at minimum freights for all British and foreign ports. The model exhibited is an exact representation of their works.

Their mills for the purpose of reducing the raw phosphates to a fine powder are erected at Ipswich, and are the largest and most powerful that are devoted to this purpose in England.

The following ground and unground samples are exhibited:—

1. Phosphate from Nassau, Germany, containing from 60 to 70 % of phosphate of lime.

2. Phosphate from the island of Navassa, W.I., containing 65 to 75 % of phosphate of lime.
3. Phosphate from the island of Sombrero, W.I., containing 77 % of phosphate of lime.
4. Phosphate from Estramadura, Spain, containing from 65 to 70 % of phosphate of lime.
5. Coprolite from the 'Green Sand,' Cambridge-shire, England, containing 61 % of phosphate of lime.
6. Coprolite from the 'Red Craig,' Suffolk, England.
7. Coprolite from Bedfordshire, England.

Superphosphates of lime

8. Containing 18 to 21 % of soluble phosphoric acid.
9. Containing 15 to 18 % of soluble phosphoric acid.
10. Containing 14 to 15 % of soluble phosphoric acid.
11. Containing $12\frac{1}{2}$ to 14 per cent. of soluble phosphoric acid.
12. Ammoniated Sombrero guano, containing $14\frac{1}{2}$ % of soluble phosphoric acid, and $4\frac{1}{2}$ % of ammonia.

PENNEY & CO. (LIMITED), LINCOLN, Angleterre.—Billancourt, Hangar D.

Séparateur à Grains, rotatoire et s'ajustant à volonté, breveté, de Penney.

Ces Machines sépareront le grain de toutes grosseurs et de toutes espèces à raison de 8 à 12 quarters (25 à 35) hectolitres selon leur dimension, et conviennent admirablement aux Fermiers, Négociants en Grains, Marchands de Malt, etc., leur permettant de préparer leurs grains, de façon à en obtenir le plus haut prix. Elles peuvent se mouvoir à la main ou par la vapeur. Elles sont employées dans les Machines à battre combinées, par les principaux ingénieurs.

Diese Maschinen können alle Grössen oder Arten von Getreide scheiden, von 8 bis 12 Malter per Stunde, je nach der Grösse, und eignen sich vorzüglich für Oeconomen, Kornhändler, Malzer u. s. w., da es dieselben in den Stand setzt, ihr Getreide so zuzurichten, dass es den höchsten Preis einbringt. Es kann durch Hand- oder Dampfkraft betrieben werden und wird besonders für combinirte Dreschmaschinen von den berühmtesten Ingenieuren gebraucht.

RANSOMES & SIMS, *Ipswich and London.*

RANSOMES & SIMS' factory, the 'Orwell Works,' established in 1785, is situated at Ipswich, distant from London 69 miles, and accessible by the Great Eastern Railway in two hours.

The factory covers more than twelve acres of land, and employs more than 1,100 men and boys.

The London office of the firm is at 9 *Gracechurch-street*.

The seven pages following contain drawings of the principal agricultural implements manufactured at the Orwell Works. Specimens of the portable engines and other machines may be seen during the Exhibition at the main building, Class 52, and in the British Agricultural Annexe, Classes 48 and 74; also at Billancourt, at RANSOMES & SIMS' dépôt, at the warehouse of Mr. EDMOND GANNERON, Quai de Billy, No. 26, Paris, and in the large building at the Pont de Jena, belonging to the British Admiralty, Class 99; at either of which places may be obtained the fullest information as to the manufactures of the firm, and catalogues in various languages. One of the partners of the firm, Mr. JOHN HEAD, will be in attendance during the Exhibition to give any information required.

The experience which has been accumulated by RANSOMES & SIMS has enabled them to adapt their manufactures in the most successful manner for the use of cultivators in all parts of the world, and for the agriculture of tropical as well as of temperate climates.

The following are prominent characteristics of all the machinery made by RANSOMES & SIMS:—

1. Every machine is designed so that the parts liable to wear out can be replaced with the least difficulty, and without skilled mechanical labour. These parts are all marked with letters and numbers, by reference to which duplicate parts, exactly similar to the originals in size and form, may be procured from the factory as required, and with a certainty that they will fit properly, even though they may not be ordered for many years after the machine has been purchased.

2. Every machine is so constructed that if badly used or over-strained by working, the first part to give way will be that which can be replaced with the least difficulty and expense.

3. The most suitable materials are employed;

great care is taken that they are of the best quality, and that all woodwork is thoroughly sound and well seasoned.

4. The prices are the lowest at which it is possible to supply thoroughly good and well-manufactured machinery of ample strength, and suitable for use in countries where the work is very severe, and repairs are difficult to execute. RANSOMES & SIMS confidently assert that if a careful comparison be made between their manufactures and others which are offered at lower prices, it will mostly be found that this apparent cheapness is procured by a deterioration in the quality or quantity of material, or by the use of inferior workmanship, and, not unfrequently, by a combination of all these drawbacks to the value of the machine.

The high position which RANSOMES & SIMS have attained may be gathered from the following summary of prizes, medals, and other certificates of merit conferred upon them for their manufactures by—

The Royal Agricultural Societies of England and Ireland; the Bath and West of England Society; the Paris Exhibitions of 1855 and 1856; the International Exhibitions and Agricultural Societies of St. Petersburg, Vienna, Hamburg, Brussels, Schwerin, Zaandam, Rostock, Lille, Stettin, Amsterdam, Rotterdam, Dresden, Cologne, Haarlem, Rouen, Oporto, Alipore, Lucknow, Adelaide, Ballarat, Port Phillip, Longford, &c. &c.

Nearly £1,000 in Money Prizes.

24 Gold Medals.

104 First Prizes.

53 Silver Medals.

18 Second Prizes.

24 Bronze Medals.

7 Third Prizes.

26 High Commendations.

18 Commendations.

15 Certificates of Merit.

93 All England Champion Plough Prizes since September, 1864, including 2 Bronze Medals at the International Exhibition of 1851; 2 Prize Medals at the International Exhibition of 1862; the only Grand Gold Medal of Honour given to an English firm at the Paris Exhibition, 1856; and the following decorations:—*The Order of the Medjedieh from the Sultan of Turkey.*

The Insignia of Commander of the Order of Christ, from the King of Portugal.

The most improved English Prize Plough, with separate Bodies for various uses. In 4 sizes, RND, RNE, RNF, RNG. More prizes have been won with this pattern plough than with any other.

BFS. A Light Iron Plough.

A Light Ridging Plough. BFD.

scw. Improved Scotch Swing Plough.

Improved English Ridging Plough. DBO.

BFS. Iron Double Furrow Plough.

English Prize Plough, with Gallows. YL.

Improved Four Furrow Plough.

Patent Oneway or Turnwrist Plough. SPT.

Patent Steam Plough.

Light Iron Turnwrist Plough. RET

Improved Dutch Plough.

Wide Furrow Plough. YFR.

F.D.

FDH.

Ploughs for Tropical Agriculture,
In sizes adapted for Two, Four, or Six Oxen.

FSH.

FL.

BFO. A very Light Wood Beam Plough,
with various Bodies.An improved Strong English Plough, with high
Wood Beam for Oxen. WVRL.REB. A very Light Wood Beam Plough, with high adjustable
Beam for Oxen.

Cotgreave's Patent Subsoil and Trenching Plough.

Patent Ploughshares, which do not wear blunt.
Also all kinds of Iron Work for Ploughs.

Scarifiers, Grubbers, or Cultivators, for two or more Horses or Oxen.

Patent Whippetrees and Pomeltrees for Ploughs and other Field Implements.

Rollers and Clod Crushers of every Description.

Harrows of various kinds.

Reaping and Mowing Machines.

Patent Haymakers.

Patent Horse Rakes.

Single Cylinder. 3 to 12 horse-power.

Double Cylinder, 10 to 20 horse-power.

Portable Steam Engines.

Newly designed Expansion Portable Steam Engines.
Will not consume more than half the fuel burnt by ordinary Portable Engines.Self-moving and Traction Engines,
8 to 14 horse-power.Stationary High Pressure Engines,
4 to 30 horse-power.

Centrifugal and other Pumping Machinery, for Irrigation or Drainage, &c., by steam or horse-power.

A 1. Steam Threshing Machine, perfectly finishing the Grain for Market at one Operation.

H 1. Steam Threshing and Dressing Machine, with Apparatus for breaking the Straw simultaneously into Food for Cattle.

Machinery for Threshing and Dressing Grain, adapted for Animal Power.

Maize or Indian Corn Sheller.

Poyser's Patent Corn Screen and Grain Separator.

Machines for Winnowing and Cleaning Corn, Barley, Rice, Coffee, &c.

Patent Self-Cleaning and Adjustable Rotary Corn Screen for removing the small Kernels, &c., from any Sample of Grain.

Fixed or Portable Corn Drills with Stones from 2 feet to 4½ feet diameter, and suited for producing fine Flour for Household Purposes or for grinding Food for Cattle.

Patent universal Mills for bruising Oats, Barley, Linseed, and for splitting Beans, Peas, or Maize.

Cotton Gins for every Description of Fibre.

No. 4 for crushing Oats.

No. 1 for splitting Beans, Peas, or Maize.

Nos. 10, 11, 17 for crushing Oats, splitting Beans, Peas, or Maize, and breaking Oil Cake.

Biddell's Patent Steel Roller Mills.

No. 22. Chaff Engine.

No. 24. Chaff Engine.

Machines for cutting Hay, Straw, Cane Trash, Hop Bines, &c., for Cattle Feeding and other purposes.

Gardner's Turnip Cutter for cutting Roots
for Cattle or Sheep Feeding.

Biddell's Patent Root Pulper for preparing
Roots for Cattle Feeding and other purposes.

Circular Saw Tables of various sizes.

The Automaton Lawn Mower,
for mowing Grass Plats in Gardens.

READING IRON WORKS (LIMITED), *Reading, England (late Barrett, Exall, & Andrewes).*

Engineers and Agricultural Machinists.

Ingenieurs et Constructeurs de Machines Agricoles.

Ingenieure und Fabricanten von landwirthschaftlichen Maschinen.

Ingegneri e Macchinisti Agrari.

This Company hold THE LAST THREE TRIENNIAL PRIZES awarded by the Royal Agricultural Society of England for the best and most economical Fixture Steam Engine, at which the first Manufacturers compete.

Prize Medals have also been awarded them for their fixed and portable engines at the International and other Exhibitions at London, Hamburg, Paris, Turin, Munich, Cologne, Stettin, Riga, and other places upon the Continent, as well as in England.

The great object constantly before the attention of this Company is *economy* in the consumption of fuel combined with first class workmanship and simplicity of construction.

Cette Compagnie tient LES TROIS DERNIERS PRIX TRIENNAUX, décernés par la Société Royale d'Agriculture d'Angleterre, pour la meilleure ainsi que la plus économique Machine à Vapeur Fixée, en concurrence avec les constructeurs principaux.

Des Médailles lui ont aussi été décernées pour ses Machines Fixes et Portatives aux Expositions Internationales et autres, à Londres, Hambourg, Paris, Turin, Munich, Cologne, Stettin, Riga, et autres lieux sur le Continent, aussi bien qu'en Angleterre.

Cette Compagnie a constamment pour son but spécial *l'économie* dans la consommation du combustible, avec la meilleure main-d'œuvre et la simplicité de construction.

Fixture Engine—*Machine Fixée sur Place*—Stabile Dampfmaschine—*Motore Fisso.*

They direct special attention to their celebrated horse-power portable thrashing machines and safety horse-works, of which upwards of 5,000 are at work in all parts of the world.

To their sawing machinery, first prize barley horner, hay machines, horse-rakes, ploughs, patent chain corn drills, clod crushers, land pressers, oilcake mills, chaff machines, grain crushers, gorse machines, flour-grinding mills, cotton gins, reaping and mowing machines, and other agricultural and general machinery.

Plans and estimates of farm machinery, steam or water power, flourmills, sawmills, and general engineering work, as also their large illustrated catalogue, supplied on application to the READING IRON WORKS (LIMITED), Reading England.

Elle appelle attention spéciale sur ces célèbres machines à battre portatives de la force de cheval et sur ses manèges de sûreté, dont plus de 5,000 fonctionnent dans toutes les parties du monde.

Ainsi que sur ses machines à scier, son décortiqueur à orge (premier prix), ses faneuses, râtaux, charrues, semoirs à chaîne, brevetés; ses broyeurs à mottes, rouleaux, moulins à tourteaux, hache-pailles; ses machines à broyer le grain, à arracher les ajoncs; ses moulins à farines, machines à égrener le coton; ses faucheuses, moissonneuses, et autres instruments de travail agricole et en général.

Plans et devis de machines à l'usage de fermes, usines mues par l'eau ou la vapeur, moulins à farine, scieries, et généralement tout ce qui concerne la profession d'ingénieur; ainsi que son grand catalogue illustré, fournis en s'adressant aux FORGES DE READING (Société à responsabilité limitée), à Reading, Angleterre.

READING IRON WORKS (LIMITED), Reading, England (late Barrett, Exall, & Andrewes).

Diese Compagnie hat DIE LETZTEN DREI DREIJÄHRIGEN PREISE von der Königlichen Landwirthschaftlichen Gesellschaft von England, auf deren Versammlungen die besten Fabricanten competiren, für die beste und Ersparniss am meisten befördernde stabile Dampfmaschine zuerkannt bekommen.

Preismedaillen sind ebenfalls für ihre stabilen und locomobilen Dampfmaschinen auf den internationalen und andern Ausstellungen zu London, Hamburg, Paris, Turin, München, Cöln, Stettin, Riga und andern Orten auf dem Continente, wie auch in England, ertheilt worden.

Das grosse Ziel, welches diese Compagnie fortwährend vor Augen hat, ist *Ersparniss* im Verbrauch von Feuerung, verbunden mit bester Arbeit und Einfachheit der Construction.

Sie macht besonders auf ihre berühmten locomobilen Dreschmaschinen für Pferdekraft und Sicherheits-Pferde-Maschinerie, von welchen mehr als 5,000 in allen Theilen der Welt in Thätigkeit sind, aufmerksam.

Auf ihre Säge-Maschinerie, Gerstereinigungsmaschine, Heumaschinen, Pferderechen, Pflüge,

Questa Compagnia tiene I TRE ULTIMI PREMI TRIENNALI aggiudicati dalla Società Reale d'Agricoltura d'Inghilterra pel migliore anziche il più economico Motore Fisso dietro concorrenza fatta tra i fabbricanti principali. Diverse Medaglie sono anche state aggiudicate a questa Compagnia pei suoi Motori Fissi e Portatili alle Esposizioni Internazionali ed altre, a Londra, Amburgo, Parigi, Torino, Monaco, Colonia, Stettin, Riga, e altrove sul Continente come in Inghilterra.

Lo scopo principale di questa Compagnia è il risparmio del combustibile, non che la bellezza di fattura e la semplicità di costruzione.

Richiama speciale attenzione ai suoi celebri trebbiatori portatili e lavori di sicurezza a cavalli, dei quali meglio che 5,000 sono in azione in tutte le parti del mondo.

Portable Engine—Locomobile—Locomobile Dampfmaschine—Motore Portabile.

patentirten Ketten-Säemaschinen, Eggen, Walzen, Oelkuchenmühlen, Spreuschneidemaschinen, Kornzermalmer, Futterschneidemaschinen, Mehlmühlen, Egrenirmaschinen, Ernte- und Mähmaschinen und andere landwirthschaftliche und allgemeine Maschinerie.

Entwürfe und Anschläge von landwirthschaftlicher Maschinerie, Dampf- oder Wasserkraft, Mehlmühlen, Sägemühlen und allgemeiner Ingenieurarbeit, wie auch ihre grossen illustrirten Cataloge, werden gesandt auf gefällige Anfrage von den READING IRON WORKS (Limited), Reading, England.

Alle sue seghe meccaniche mondatore da orzo (gran premio) fienaiolo, rastrelli a cavalli, aratri, semina grano a catena patentati, tritola, zolle, compressori di terra, mulini per panelli, macchine da pula, tritola grano, macchine da ulice, mulini, monda cotone, falciatrici e mietitrici, ed altri meccanismi agrari e in generale.

Piani e stime di meccanismi rurali a forza di vapore o d'acqua, mulini, seghe a macchina e opere d'ingegnere in generale, come pure il suo gran catalogo illustrato vien rilasciato ai richiedenti alla MAGONA DI READING (anonima), a Reading, Inghilterra.

ROBEY & CO., General Engineers, Lincoln, England.

These Engines possess considerable advantages over the ordinary horizontal fixed engine; they occupy less space, and require no brick-work or masonry for foundation, as they have an iron foundation, which forms the ash-pan, and is also a feedwater-tank, to heat the water before passing into the boiler. The fire-box is adapted to burn wood. These engines are very suitable for corn mills, cotton machinery, &c., as they are complete in themselves, and can be set down and used immediately.

PRICES.

Three-horse power	. . .	£80
Four " "	. . .	£100
Six " "	. . .	£135
Eight " "	. . .	£165

Ces Machines possèdent des avantages considérables sur les machines fixes horizontales ordinaires; elles occupent moins d'espace, et n'exigent point de fondation en briques ou en maçonnerie, attendu qu'elles en ont une en fer qui forme le cendrier, en même temps qu'elle est un réservoir d'alimentation où l'eau s'échauffe avant de passer dans la chaudière. La boîte à feu est adaptée à la consommation du bois. Ces machines conviennent parfaitement pour moulins à grains, machines à travailler le coton, etc., étant complètes par elles-mêmes et pouvant se poser et fonctionner immédiatement.

PRIX. Machine de trois chevaux	. Fr. 2,000
" de quatre "	. 2,500
" de six "	. 3,375
" de huit "	. 4,125

Diese Dampfmaschinen besitzen grosse Vortheile über die gewöhnlichen stehenden horizontalen Maschinen; sie nehmen weniger Platz ein und brauchen kein Backstein- oder Mauerwerk als Grund, da sie eine eiserne Grundlage haben, welcher den Aschenkasten bildet und ebenso als Wasserbehälter, zum Erwärmen des Wassers, ehe es in den Kessel übergeht, dient. Das Feuerloch eignet sich zum Brennen von Holz. Diese Maschinen passen besonders für Kornmühlen, Baumwoll-Maschinerie u. s. w., da sie bei sich selbst vollständig sind und sogleich, nachdem sie niedergesetzt sind, benutzt werden können.

PREISE.

Drei Pferdekraft	. Thlr. 533 $\frac{1}{2}$
Vier " "	. 666 $\frac{2}{3}$
Sechs " "	. 900
Acht " "	. 1,000

Questi Motori posseggono vantaggi considerabili lisugli motori fissi orizzontali. Occupa no minore spazio e non richiedono lavoro di mat toni o muratura per fondamento, avendone una di ferro che forma il cinerario, ed è anche cisterna alimentatrice per riscaldar l'acqua prima che passi nella caldaia. Il fornello è adattato per arder legna. Questi motori sono adattissimi per mulini da grano, meccanismi per cotone, ecc., essendo completi in se stessi, e si possono fissare d usare immediatamente.

Improved Stationary Steam-Engine—Machine à Vapeur Stationnaire perfectionnée.
Verbesserte stehende Dampfmaschine—Motore fisso perfezionato.

Improved Portable Steam Engine—*Machine à Vapeur portative perfectionnée.*
Verbesserte transportable Dampfmaschine—*Motore a Vapore portatile perfezionato.*

Diese Dampfmaschinen sind von bestem Material und bester Arbeit und können auf Verlangen mit grösserem Feuerloche zum Brennen von Holz versehen werden. Sie sind sehr stark und dauerhaft gemacht und eignen sich daher besonders für fremde Länder und Orte, welche in grosser Entfernung von einer Maschinenfabrik liegen. Jede von ROBEY & Co. gemachte Maschine hat die doppelte ihrer nominellen Kraft. Viele Preismedaillen und Preise sind für diese Dampfmaschinen gegeben worden.

PREISE.

Acht Pferdekraft	.	Thlr. 1,400
Zehn „ „	.	1,600
Zwölf „ „	.	1,800

Questi motori sono di materiali e lavorazione superiori, e, se occorre, sono forniti di fornello più grande per arder legna. Sono fatti molto forti e durevoli, e così sono utilissimi all'estero in luoghi distanti da officine. Ogni motore di ROBEY E CIA. è eguale al doppio della sua forza nominale. Molte medaglie e premi sono stati aggiudicati a questi motori.

PREZZI.

Forza di otto cavalli	.	L. st. 210
„ di dieci „	.	240
„ di dodici „	.	270

ROBEY & CO., *General Engineers, Lincoln, England.*

This Sugar-Cane Mill has been designed for small plantations. The whole of the machinery is combined on one strong iron foundation frame, for convenience in erection; and to facilitate transport it can readily be taken into pieces of light weight. A mill of six-horse power will yield two tons of sugar per day.

Price, complete for shipment, £520.

Ce Moulin à Cannes a été construit pour les plantations de peu d'étendue. Tout son mécanisme repose sur une solide charpente de fondation en fer afin d'en faciliter l'érection; et son transport est également rendu plus facile par la faculté qu'il possède de se démonter en pièces d'un poids léger. Un moulin de la force de six chevaux produira deux tonnes—2,030 kil.—de sucre par jour.

Prix, complet pour expédition, 13,000 fr.

Sugar-Cane Mill and Engine combined—*Moulin à Cannes et Machine à Vapeur, combinés.*
 Combinirte Zuckerrohrmühle und Dampfmaschine—*Molino da Canna da Zucchero e Motore combinati.*

Diese Zuckerrohrmühle ist für kleine Pflanzungen bestimmt. Die ganze Maschinerie ist auf einem starken Gestelle, als Grundlage dienend, befestigt, zur Bequemlichkeit der Aufsteller; und um Transport zu erleichtern, kann sie leicht in Stücke von geringer Schwere genommen werden. Eine Mühle von sechs Pferdekraft producirt 6 Tonnen Zucker per Tag.

Preis, vollständig, für Verschiffung,
 3,466 $\frac{2}{3}$ Thlr.

Questo Mulino da Canna da Zucchero è stato ideato per piccole piantazioni. Il totale del meccanismo è combinato in una intelaiatura di fondazione in ferro per comodità nell'erezione; e per facilitarne il trasporto si può facilmente smontarla in pezzi di peso leggero. Un mulino della forza di 6 cavalli darà due tonnellate di zucchero per giorno.

Prezzo, completo per l'imbarco, L. st. 520.

ROBEY & CO., General Engineers, Lincoln, England.

The Thrashing Machines of ROBEY & Co. have a world-wide reputation for the excellent manner in which they clean and separate the grain, and deliver the straw straight. These machines are very durable, and of the most simple design. They do not easily get out of order, and therefore cost little for repairs. An eight-horse machine will thrash 800 bushels of grain per day of ten hours.

PRICES.

Finishing machine . .	£120
Single dressing machine .	£100

Les Machines à Battre de ROBEY ET C^{IE}. jouissent d'une réputation s'étendant dans le monde entier pour l'excellence de leur façon de nettoyer et séparer le grain, et de livrer la paille droite. Ces machines sont d'une très-grande durée, et de la construction la plus simple. Ne se dérangeant que difficilement, elles ne coûtent par conséquent que fort peu en réparations. Une machine de huit chevaux battra 800 boisseaux—30 hectolitres—de grain par journée de travail de dix heures.

PRIX.

Machine à nettoyage complet	Fr. 3,000
Machine à nettoyage simple .	2,500

Eight-Horse Power Thrashing Machine—Machine à Battre de huit Chevaux de Force.

Dreschmaschine von acht Pferdekraft—Trebbeia a Forza di otto Cavalli.

Diese Dreschmaschinen von ROBEY & Co. genießen eines weltverbreiteten Rufs für die ausgezeichnete Weise, auf welche sie das Getreide reinigen und trennen und das Stroh gerade überliefern. Diese Maschinen sind sehr dauerhaft und von einfachstem Entwurf. Sie gerathen nicht leicht in Unordnung und kosten daher wenig für Reparaturen. Eine Maschine von acht Pferdekraft drischt 800 Malter Getreide per Tag von 10 Stunden.

PREISE.

Reinigungsmaschine . .	Thlr. 800
Einfache Zurichtemaschine .	666 $\frac{2}{3}$

Queste Trebbie di ROBEY E CIA. hanno una riputazione mondiale per l'eccellente maniera con cui mondano e scelgono il grano e scaricano la paglia diritta. Queste macchine sono duravolissime e della più semplice struttura. Non si guastano facilmente, e perciò costano poco in risarcimenti. Una macchina a forza di otto cavalli trebbierà 800 staia di grano per giornata di 10 ore.

TURNER, E. R. & F., Ipswich, England.

Obtained the Prize Medal of the International Exhibition of London, 1862. Prize Gold Medal and 150 francs at the Paris International Exhibition of Agriculture, 1856. Large Silver Medal of the Vienna Imperial Exhibition, 1857. Six Medals and Money Prizes at the Royal Agricultural Exhibitions of East Flanders in 1861 and 1865. Gold Medal from the Royal Agricultural Society of Holland, 1863. Numerous Money Prizes and Medals of the Royal Agricultural Societies of England and Ireland and at various local Exhibitions. Large Silver Prize Medal, at the International Exhibitions of Hamburg 1863, and Lille, 1863, &c. &c.

Ont obtenu la Médaille de l'Exposition Internationale de Londres, 1862. Médaille d'Or et 150 francs à l'Exposition Internationale d'Agriculture de Paris, 1856. Grande Médaille d'Argent de l'Exposition Impériale de Vienne, 1857. Six Médailles et Prix en Argent aux Expositions Royales d'Agriculture des Flandres Orientales en 1861 et 1865. Médaille d'Or de la Société Royale d'Agriculture de Hollande, 1863. Nombreuses Médailles et Prix en Argent de la Société Royale d'Agriculture d'Angleterre et d'Irlande, et à diverses Expositions locales. Grande Médaille d'Argent aux Expositions Internationales de Hambourg, 1863, et Lille, 1863, etc., etc.

E. R. & F. Turner's Five-Horse Power Portable Steam Engine.

This Engine is constructed with all the latest improvements. The boiler is of the Flush Top form, the workmanship executed with great care, and the design and arrangement of stays such as to ensure great strength, so that a pressure of steam considerably in excess of that ordinarily used with portable engines, may be safely employed, and fully double the nominal power obtained.

The 5-horse engine is of very convenient size for agricultural purposes; and, used for driving E. R. and F. T.'s favorite C F machine, it will thrash and dress a large quantity of corn per day.

Price in London (with extra safety-valve, steam gauge, and whistle), 163*l*. Engines similar in construction to the above, of 2, 3, 4, 6, 7, 8 and 10 horse power, and thrashing machines, adapted for each particular size of engine, are manufactured by E. R. and F. TURNER.

Cette Machine est construite avec tous les perfectionnements les plus récents. La chaudière est de la forme dite à sommet en saillie, la main d'œuvre très-soignée, et le système et la disposition des brides de nature à assurer une grande solidité, de façon qu'une pression de vapeur considérablement en excès de celle ordinairement en usage pour les machines locomobiles, peut s'appliquer sans nul danger, doublant ainsi la puissance nominale de la machine.

La machine de 5 chevaux est d'une dimension qui convient parfaitement aux usages de l'agriculture; et employée comme moteur de la machine favorite D F de E. R. et F. T., elle battra et nettoiera une grande quantité de grain chaque jour.

Prix, à Londres (avec soupape d'extra sûreté, manomètre et sifflet), 4,116 frs. Des machines d'une construction semblable à celle ci-dessus, de 2, 3, 4, 6, 7, 8 et 10 chevaux, et des batteuses adaptées à chaque dimension particulière de machine, sont aussi construites par E. R. et F. TURNER.

TURNER, E. R. & F., Ipswich, England.

E. R. & F. Turner's Prize Roller Crushing Mills.

Of the several varieties of these mills exhibited, the above engraving represents the No. 1 B mill, which is a type of the whole. As examples of the economy they afford, it may be stated that horses in their prime and in full work, derive as much nourishment from three bushels of oats crushed by these mills as from four bushels of uncrushed oats. With horses either too young or too old to masticate properly, the saving is considerably more. For fattening beasts or pigs, barley thus crushed is as efficacious as if ground to fine meal; all waste from dust is avoided, and as the power required for crushing is scarcely more than a tenth of that necessary for grinding an equal quantity, the saving in the cost of preparation is manifest. As linseed and malt crushers these mills are also perfect. Each size mill is made with or without a bean mill combined on the same frame, and which may be used simultaneously.

Prices in London, 3*l.* 3*s.* to 24*l.*

Illustrated catalogues of the numerous articles manufactured by E. R. & F. TURNER will be sent post free, on application to the works, Ipswich, England; or to their London office, 52 Gracechurch-street, E.C.

Des diverses espèces de ces moulins concasseurs exposés, la planche ci-dessus repré-

sente le moulin No. 1 B, qui est le type de tous les autres. On peut citer, comme exemple de l'économie qu'ils permettent de réaliser, que des chevaux dans toute leur force et en plein travail sont aussi bien nourris avec trois boisseaux d'avoine concassée par ces moulins que par quatre boisseaux d'avoine non concassée. Cette économie est encore beaucoup plus considérable avec des chevaux trop jeunes, ou trop vieux, pour que la mastication s'opère convenablement. L'orge ainsi concassé est tout aussi efficace pour engraisser les bêtes à cornes et les porcs que s'il était moulu fin; tout déchet provenant de la poussière est évité, et la puissance motrice requise pour concasser étant à peine un dixième de celle nécessaire pour moudre, l'économie résultant de ce mode de préparation est manifeste. Ces moulins sont aussi parfaits comme concasseurs de graine de lin et de malt. Chaque dimension est construite avec ou sans moulin à fèves combiné sur la même charpente, et dont on peut se servir simultanément.

Prix à Londres, 80 fr. à 600 fr.

Des catalogues illustrés des nombreux articles fabriqués par E. R. et F. TURNER seront envoyés franco sur demande adressée aux usines Ipswich, Angleterre, ou à leurs bureaux à Londres, 52 Gracechurch-street, E.C.

RICHMOND & CHANDLER, *Salford, Manchester,*

Manufacturers of Patent Chaff Machines, Corn Crushers, Horse and Bullock Powers, Turnip Cutters, Steaming Apparatus, Bread-kneading Machines, &c. &c.

Constructeurs de Hache-pailles brevétés, Concasseurs, Manèges pour Chevaux et Bœufs, Coupe-racines, Appareils de Cuisson à la Vapeur, Pétrins mécaniques etc. etc.

Patent Chaff Machine.—*Hache-paille, breveté.*

These celebrated machines have taken first prizes of the most important agricultural societies, including—

- 1st Prize of the Royal Agricultural Society of England;
- 1st Prize of the Royal Agricultural Society of Scotland;
- 1st Prize of the Royal Agricultural Society of Ireland;
- 1st Prize of the Adelaide Agricultural Society, Australia;
- Prize Medal of the International Exhibition, 1862;
- Prize Medal of the Vienna Exhibition, 1866.

Ces machines renommées ont remporté les premiers prix aux concours agricoles les plus importants, entre autres:

- Le 1^{er} Prix de la Société Royale d'Agriculture d'Angleterre;
- Le 1^{er} Prix de la Société Royale d'Agriculture d'Essoe.
- Le 1^{er} Prix de la Société Royale d'Agriculture d'Irlande;
- Le 1^{er} Prix de la Société d'Agriculture d'Adélaïde, Australie;
- Médaille à l'Exposition Internationale de 1862;
- Médaille à l'Exposition de Vienne, 1866.

WOODS & COCKSEGE, *Suffolk Iron Works, Stowmarket, England.*

Prize iron horse gear, with intermediate motion and clutch to throw out of gear in an instant, entirely of iron, very strong, for driving Woods & Cocksege's prize chaff-cutter, root pulper, crushing mills, pump, cotton gin, or circular saw, from the power of a pony to four horses; prices from 9*l.* 9*s.* to 27*l.* Awarded upwards of 40 prizes and silver medals the last three years.

The farmers' universal crushing mill, for preparing food for pigs, bullocks, horses, or poultry, for hand, horse, or steam power, for linseed, malt, barley, rye, wheat, beans, peas, or Indian corn, 5*l.* 15*s.* upwards.

Prize oil-cake breakers, for lambs, sheep, bullocks, or into powder for manure; hand, horse, or steam power, 2*l.* 10*s.*, 3*l.* 15*s.* to 9*l.* 9*s.*

Prize iron horse or bullock gear, with 2 force pumps attached for irrigation.

Prize thrashing machines for ponies, horses, and steam power.

Prize corn-grinding mills, with French burr-stones, 16 inches to 54 inches diameter.

Manège à chevaux, en fer (médaillé), avec mouvement intermédiaire et dent pour arrêt instantané, construit entièrement en fer, très-solide, pour faire mouvoir le hache-paille (médaillé) de Woods et Cocksege, décortiqueur à racines, concasseurs, pompe, machine à égrener le coton, ou scie circulaire, de la force d'un poney jusqu'à celle de quatre chevaux; prix de 236 fr. 25 c. à 676 fr. Ont remporté plus de 40 prix et médailles d'argent durant les trois dernières années.

Concasseur universel du fermier, pour préparer la nourriture des porcs, bœufs, chevaux, ou de la volaille, mûe à la main, et par force de cheval ou de vapeur, pour graine de lin, malt, orge, seigle, blé, fèves, pois, ou maïs, 143 fr. 75 c., et au-dessus.

Concasseurs à tourteaux (médaillés) pour agneaux, moutons, bœufs, ou à réduire en poudre pour engrais; mus à la main par force de cheval ou de vapeur, de 62 fr. 50 c. et 93 fr. 75 c., à 236 fr. 25 c.

Manège à chevaux ou à bœufs, en fer (médaillé), avec deux pompes foulantes attachées pour l'irrigation.

Machines à battre (médaillées), pour poneys, chevaux, et force de vapeur.

Moulins à moudre le grain (médaillés), avec meules françaises, depuis 0 m. 41 c. à 1 m. 38 c. de diamètre.

First Prize Carts for Agriculturists or Contractors, twice awarded the Prize by the Royal Agricultural Society of England.

Price 11*l.* 11*s.* to 16*l.* 16*s.*

Illustrated catalogues in all languages, free by post.

Charrettes pour Agriculteurs et Entrepreneurs (premier prix) ont eu deux fois le prix de la Société Royale d'Agriculture d'Angleterre.

Prix depuis 288 frs. 75 c. jusqu'à 420 frs.

Catalogues illustrés dans toutes les langues, franco par la poste.

CLASS XLIX.

PULLINGER, COLIN, 10 Essex-street, Strand, London.

Perpetual and Automaton Self-Setting Mouse Traps.

Souricières automates, à action perpétuelle, se tendant d'elles-mêmes.

Immerwährende und sich selbst aufstellende Automat-Mausefallen.

Trappola da Topi ad azione perpetua automatica e sè-ritendente.

Its peculiar features are:—1. Every mouse resets it for the next mouse; 2. The same bait lasts for months; 3. It catches from 6 to 14 mice in one night; 4. It is one of the most ingenious traps ever invented, and soon saves its cost, which is from 3 francs each and upwards.

E the entrance.

L I the balance board or treadle.

C and D the chambers for the caught mice.

— — —

Les caractères distinctifs de cette souricière sont:—1. Que chaque souris prise la retend pour la souris qui lui succède.; 2. Que la même amorce dure pendant des mois; 3 Qu'elle prend de 6 à 14 souris en une seule nuit; 4. Enfin d'être une des plus ingénieuses souricières qui aient jamais été inventées, et de gagner rapidement à l'acheteur son prix, qui est de 3 francs et au-dessus.

E l'entrée.

L I la planche à bascule, ou marchette.

C et D les chambres pour les souris prises.

Ihre besondern Eigenschaften sind:—1. Jede Maus stellt sie wieder für die nächste Maus; 2. Dieselbe Lockspeise reicht für Monate; 3. Sie fängt von 6 bis 14 Mäuse in einer Nacht; 4. Sie ist eine der besten Fallen, welche je erfunden wurden, und man erspart bald ihren Preis, welcher ein Thaler und darüber ist.

E ist der Eingang.

L I ist das Balancirbrett oder Tritt.

C und D sind die Kammern für die gefangenen Mäuse.

— — —

Le sue caratteristiche principali sono:—1. Ogni sorcio la ritende per un altro sorcio; 2. Una stessa esca basta per mesi; 3. Può prender da 6 a 14 sorci per notte; 4. È la trappola più ingegnosa che sia mai stata inventata, e si riguadagna ben presto la spesa del costo, che è da tre franchi l'una in su.

E ingresso

L I bilico o pedale.

C e D ricettacoli pei sorci presi.

CLASS L.

ATMOSPHERIC CHURN, CLIFTON'S
PATENT.

Warranted to make butter from sweet milk in ten minutes, and from cream in five minutes, without the use of any chemical preparation, leaving the milk perfectly sweet and suitable for family use. This churn produces more butter, and of a finer quality, than any other churn. Persons desirous of witnessing the operation of this novel and useful invention are invited to call at SHED D, ENGLISH DEPARTMENT, BILLANCOURT, WHERE CHURNING TAKES PLACE DAILY.

BARATTE ATMOSPHÉRIQUE, SYSTÈME
CLIFTON.

À l'aide de ces barattes on extrait le beurre du lait frais en dix minutes, et de la crème en cinq minutes, sans faire usage d'aucune préparation chimique, et en conservant par conséquent au lait sa douceur et toutes ses qualités, de sorte, que, ayant fourni tout le beurre qu'il contenait, il peut être employé aux usages domestiques pour lesquels il est habituellement utilisé. ON FAIT LES EXPÉRIENCES TOUS LES JOURS MAISON D, DÉPARTEMENT ANGLAIS, BILLANCOURT.

BOURNE, STEPHEN, *Headstone Drive, Harrow, Middlesex, N.W.*

Patent Flexible Diaphragm, Elastic Valves, and Deodorised India-Rubber.

Prize Medal and Honourable Mention at Dublin and Oporto Exhibitions, 1865.

The 'Patent Flexible Diaphragm' is a thin membrane placed within a cask or other vessel, to the sides of which its edges are attached. Always floating on the surface of the liquid, it opposes an impenetrable barrier to the access of atmospheric air, and descending as portions of fluid are withdrawn, effectually preserves the remainder. Wine, beer, &c. have thus been kept in use for a year with-

The 'Elastic Valves' are of two varieties. The one, applicable for use either with or without the diaphragm, has an *outward action* only. It consists of a disc of india-rubber covering a small orifice, and so prepared that, upon the pressure of the confined gas or fluid (which, but for its presence, would have unlimited exit), it becomes porous, and thus permits of a graduated escape to the desired extent. The other has an

out being impaired in quality, and it is actually in operation for the preservation of Burton ale and London stout. Vessels as drawn above are suitable for wines or other liquids, for domestic, medical, or scientific purposes.

The material employed for the diaphragm is entirely deprived of all odour or power of imparting flavour, by a peculiar process of treating with animal charcoal, now applied to the purification of garments and other articles made of india-rubber.

inward action only, and consists of a small cylinder of wood, metal, &c., so placed in the cask or other vessel that one end opens externally, the other on the inside. The lower part of this cylinder is covered with an elastic cap, having several slits, which, though remaining tightly closed against any pressure from within, yield to that of the air as it seeks to enter, when the liquid is allowed to flow out.

FLEET & CO., *Walworth, London.*

Steam Soda-Water Machine and Bottling Apparatus. Patentees and Sole Manufacturers.

We deem this to be the most perfect SODA-WATER MACHINE ever invented, as it is equally adapted for use at home and abroad, and for the Packet Service.

1st. By the union of a steam engine with a soda-water machine, which can be used at the same time to drive the brushes for cleansing the bottles or any other purpose for which steam power is applicable.

2nd. By dispensing, with shafting, drums, &c., &c., thus rendering it peculiarly portable and not easily disarranged, so that it can be brought into immediate use.

3rd. By producing double the quantity of soda water, lemonade, and all aerated waters, of a finer quality than any other machine hitherto invented, and being of so simple a construction that the *ordinary labourer* may be employed with the same advantage as the most *experienced bottler*. This, in tropical climates, where the cool beverages prepared by these machines are necessities of life to Europeans, is of the greatest value.

4th. The bottling apparatus, which forms so prominent a feature of the soda-water machine, is equally useful for corking wine or any

other liquid with a rapidity and security from leakage and breakage unequalled.

KENT's Knife Cleaning Machine is used in the palaces of her Majesty the Queen of England, and in nearly every royal residence in Europe; in the mansions of the nobility, and in the houses of private families throughout Great Britain; in the mess-rooms of the army and navy, on board the royal yachts, and in

chines not bearing this mark, are deceptive imitations, resembling KENT's in external appearance, but not possessing those essential parts and arrangements which make KENT's machine so effective and durable, the principle of which is protected by royal letters patent, the last patent having been granted January 1865.

Patent Compound Action Mixing Machine.—This invention introduces an entirely new principle in the construction of mixing machinery, which, by a single revolution of the handle, gives 288 strokes, or divisions of the matter submitted to its operation; and, in fact, so powerful and effective is the action of this mixing machine that it will even incorporate water with oil or fatty matter.

every passenger steam-ship on home and foreign stations, including the 'Royal Mail Steamers,' the 'Peninsular and Oriental,' the 'African,' the 'North of Europe,' and the 'Pacific;' also in the universities, colleges, scholastic establishments and public institutions of England; the mansion-house of the Lord Mayor of London, and the halls of the city companies; in every club-house, hotel and restaurant of importance in the kingdom. It is also extensively used in the colonies, and in addition to the patronage above mentioned, its utility is verified by the award of prize medals of the *International Exhibitions*, London, 1851 and 1862; *Nice*, 1865; *Cologne*, 1865. It is necessary to observe that all KENT's machines bear his trade mark (a shield) surmounted by the royal arms, with the words 'KENT, Patentee and Manufacturer, 199 High Holborn, London' therefore, rotary knife cleaning ma-

It is extensively used by makers of fancy soaps and pomades, and by manufacturers of other liquid and semi-liquid compounds, as also by cooks and confectioners, who find it beat up their mixtures to a degree of excellence never before attained. The machines are made in sizes adapted for any quantity, from one quart to thousands of gallons. Price, from 21s.

Patent Churn, on the same principle as the above mixing machine, which makes butter more quickly than any other churn at present known. 27s. and upwards.

Patent American Sausage and Mincing Machine, unsurpassed by any other invention for the purpose, and none so easily cleaned. Price 12s. 6d., 21s., 42s.

Bread Making Machines from 40s.

Patent Compound Action Egg-Beater, for family use, for beating up all kinds of egg mixtures for puddings and cakes, also for whipping creams. It produces a batter, far superior to any that can be made, in the ordinary mode, and in one-fourth the time.

6s. 6d.

Egg beater for Family Use.

5s.

Patent Milk Saver, for preventing milk boiling over, or burning, even when placed on a fierce fire. Prices 1s., 1s. 3d., 1s. 6d., 2s.

Patent Triturating Strainer, extensively used and highly valued for preparing ingredients for making soups, sauces, purées, gravies, jams, &c. Price 1l. 7s. 6d. for families, and 1l. 17s. 6d. for hotels.

Patent Rotary Potato Masher by which potatoes can be instantaneously mashed more finely and perfectly than by any other means; also grates bread and other culinary materials with equal perfection and rapidity. Price from 12s. 6d.

Patent Bread Cutter, with regulating gauge, by which the slices can be cut to any required thickness, very expeditiously. Prices from 14s. 6d.

Family Cocoa Mill (the first ever produced that can grind cocoa berries or nibs) valuable to all who desire pure cocoa. Price 12s. 6d.

Patent Parer for Oranges, Lemons, Apples, &c., which pares, cores, and slices simultaneously. Price 8s. 6d.

Patent Ice-Cream Making Machines, for freezing with or without ice. From 35s. Moulds for ditto.

Improved Patent Ice Safes and Refrigerators, from Three to Sixty Guineas.

Clothes Wringer, India Rubber Rollers with KENT's Improvements. Price 1l. 10s.; ordinary kinds, 12s. 6d.

Patent Washing and Wringing Machines and Portable Mangles. Price 2l. 15s.

Rotary Cinder Sifter, renders unobjectionable a very disagreeable duty, insures cinders being properly sifted, prevents loss, increases cleanliness, and will soon save its cost. From 3l. 3s.

The Patent Champion Carpet Sweeper. Price 15s. Raises no dust, takes up all dirt as it moves, sweeps cleaner, and wears carpets less than any other broom. The dust, lint, and even hairs, pins, needles, &c., are taken up directly into the box, and there retained as the sweeper moves along, instead of being accumulated, driven over the entire surface, and forced into the grain of the carpet, as is usual with ordinary brooms. It is warranted to sweep cleaner than brooms, and without raising any lint or dust to soil the furniture, pictures, ornaments, &c., or to stifle the lungs. The brush part will last for years, and can be renewed for 3s. 6d.

The Champion Sweeper. Price 15s.

KENT's Messer-Reinigungsmaschinen werden in 9 verschiedenen Grössen, von 2 bis 9 Messer auf ein Mal reinigend, zu Preisen von 14 Thlr. bis 98 Thlr., gemacht.

Sie werden gebraucht in den Palais Ihrer Majestät der Königin von England und in fast allen fürstlichen Residenzen in Europa; in den Häusern des Adels und in denen von Privatfamilien durch ganz Grossbritannien; in den Officiersküchen der Armee und Flotte und auf allen Passagier-Dampfschiffen, welche in England und auswärts stationirt sind; ebenso in den Universitäten, Collegien, Schulen und öffentlichen Instituten Englands; und in jedem Clubhouse, Hotel und Restaurant von Wichtigkeit.

Ihre Nützlichkeit ist durch die Zuerkennung von Preismedaillen von den *internationalen Ausstellungen zu London, 1851 und 1862, zu Nizza, 1865, zu Cöln, 1865*, bestätigt worden.

Es ist nöthig zu bemerken, dass alle Maschinen KENT's sein Fabrikzeichen haben, ein Schild mit dem königlichen Wappen, nebst den Worten 'KENT, Patentee and Manufacturer, 199 High Holborn, London;' folglich alle Dreh-Messerreinigungsmaschinen ohne dieses Zeichen are betrügerische Nachahmungen, da sie KENT's Maschinen nur in äusserer Erscheinung darstellen, aber nicht jene wichtigen Theile und Vorrichtungen besitzen, welche die Maschinen KENT's so brauchbar und dauerhaft machen, deren Princip durch königlichen Patentbrief geschützt ist; das letzte Patent wurde im Januar 1865 ertheilt.

CLASS LI.

PORTER, J. T. B. & CO., *Engineers, Lincoln, and 7 John-street, Adelphi, London.*

Manufacturers of gas works of any magnitude for the supply of towns, villages, man-sions, factories, coal mines, &c. &c.

Manufacturers also of special apparatus adapted to produce gas from coal, wood, resin, fat, tallow, animal and vegetable oils, and many other substances which may be obtained where coal is difficult to be procured.

They also manufacture retorts, condensers on various improved principles, purifiers, gas holders, governors, meters, experimental apparatus of all kinds, various kinds of improved valves, and every description of machinery required for the production of gas in the most modern and scientific manner.

Also wrought and cast iron girders, iron roofs, iron tanks of any size. Hot-water apparatus for heating, and apparatus for distilling any substance—such as petroleum, shale, coal, cotton-oil, and other matters.

Prospectuses and every information on application.

Constructeurs d'usines à gaz de toutes grandeurs pour éclairage de villes, bourgs, hôtels, châteaux, manufactures, mines de houille, etc. etc.

Fabriquent aussi des appareils spéciaux adaptés à la production du gaz tiré de la houille, du bois, des résines, des graisses, du suif, des huiles animales et végétales, et de beaucoup d'autres substances qui peuvent s'obtenir alors qu'il est difficile de se procurer de la houille.

Ils fabriquent également des cornues, des condensateurs d'après divers principes perfectionnés, des épurateurs, réservoirs à gaz, régulateurs, compteurs, appareils d'expérimentation de toutes sortes, diverses espèces de soupapes perfectionnées, enfin tous instruments et mécanismes nécessaires pour la production du gaz, d'après les systèmes les plus modernes et les plus scientifiques.

Manufacturent en outre longrines en fonte et fer forgé, toitures en fer, citernes en fer de toutes dimensions; appareils de chauffage par l'eau chaude, et appareils à distiller toutes substances—telles que huile de pétrole, de schiste, de houille, de coton, et autres matières.

Prospectus et tous renseignements sur demande.

TYLER, J. H., *Engineer, Abbey Iron Works, Bermondsey, London.*

Manufacturer of every description of Tanner's Tools and Machinery.

Fabricant de toutes sortes d'Outils et Machines pour Tanneurs.

Fabricanten von allen Sorten von Lohgerber-Werkzeugen und Maschinerie.

Fabbricante di ogni genere di Utensili e Meccanismi da Conciapelli.

This bark-mill is fitted with steel cutters (in addition to steel teeth), being much more durable than cast iron, and, when worn out, are easily renewed, rendering an entirely new cone or cylinder unnecessary. The mill will grind 20 cwt. per hour, and is suitable for all kinds of bark, either rind or hatched.

Ce moulin à tan est muni de coupes en acier (en outre de dents également en acier), qui sont beaucoup plus durables que la fonte et, quand ils se sont usés, se renouvellent facilement, rendant ainsi un nouveau cône ou cylindre inutile. Ce moulin broiera 20 cwt.—1,270 kil.—par heure, et convient pour toutes espèces d'écorce, pelées ou hachées.

Diese Lohmühle ist mit Stahlmessern (ausser den Stahlzähnen) versehen, welche viel dauerhafter als gusseiserne sind und sehr leicht erneuert werden können, wenn sie abgenutzt sind, wodurch ein neuer Zapfen oder Cylinder unnöthig wird. Die Mühle zermahlt 20 Centner per Stunde und eignet sich für alle Arten von Borke, entweder Rinde oder kleine Borke.

Questo mulino da scorza tannina è fornito di taglienti d'acciaio (in aggiunta ai denti d'acciaio), che sono molto più durevoli che quelli di ferro fuso, e, quando si sono usati, facilmente rinnovati, rendendo non necessario un nuovo cono o cilindro. Il mulino macina 20 cantara all'ora, ed è adattato per ogni sorta di scorza in pezzi grossi o minuti.

CLASS LII.

PRIME MOVERS, BOILERS, AND ENGINES,

SPECIALLY ADAPTED TO THE REQUIREMENTS OF THE EXHIBITION.

This class embraces those apparatus and machines which are exhibited in connection with the motive power of the Exhibition, as well as those used by the British Executive for facilitating the unloading and placing of the goods in the building. Objects exhibited in this class will all more or less have been subjected to a practical test as to their efficiency, and some of them, such as the boilers, driving engines, shafting belts, &c., will be in use during the whole period of the Exhibition. Almost the whole of the apparatus necessary to meet the requirements of the motive power has been lent by exhibitors, who, on being appealed to, with liberality placed their various machines gratuitously at the disposal of the Commissioners.

GENERAL ARRANGEMENTS.—The general steam arrangements are as follows:—The boilers are grouped together in a building outside the Palace, whence steam is taken by a single main to the machinery gallery; thence it is distributed to the various engines and machines requiring it; the exhaust or waste steam is reconducted by a pipe situated in the same channel as that which contains the steam main, to the chimney attached to the boiler-house.

There are six distinct engines which give motion to the various lines of shafting by means of pullies and driving belts.

The curved lines of the building rendered it impossible for any two lengths of shafting to be in the same straight line; hence, wherever it is necessary for one engine to drive several lengths, they are joined together with universal couplings. The application of universal couplings on so large a scale is a novelty, and from the power to be transmitted and other requirements the question presented some difficulties.

COAL.—The fuel used for the generation of steam is Welsh coal, known as the Marine Merthyr, and is supplied by the firm of Messrs. Dixon and Harris. It is weighed by a machine exhibited by Mr. David Hart, and so constructed as to indicate weights with a very high degree of accuracy.

BOILERS.—The boilers are collectively of 198 nominal horse-power, but could if need be, and very likely at times will, indicate a considerably greater force.

The three largest boilers, of 46 nominal horse-power each, are supplied by Messrs. Galloway, of Manchester. They are cylindrical, with flat ends, and contain the usual double

furnace flues, joined beyond the fire bridge to an oval back flue, which is fitted with Messrs. Galloway's patent conical water tubes. These tubes are placed across the flues and serve to strengthen them as well as to increase the heating surface and promote rapid movement of the water.

The makers are of opinion that a conical form specially aids the circulation, while it also permits of the tubes being more readily fixed and withdrawn. They further aver that the position of the tubes is such that the *quality* of the heating surface obtained by their use is more than ordinarily high. The boilers are surmounted by cylindrical steam chests, and the main pipe connecting them together is furnished with a couple of wrought-iron disc expansion joints.

Messrs. J. & F. Howard, of Bedford, supply a boiler of 30 horse-power, nominal, on a principle different from that ordinarily in use. It consists of a series of vertical wrought-iron tubes forming the water and steam space, which are suitably connected together at their tops and bottoms; the fire is contained in a furnace outside the boiler, the flame and heated air, after they have passed the fire-bridge, are kept circulating amongst the tubes by means of partitions. Being made in pieces this boiler is particularly portable, and it may readily be constructed to stand a very high pressure.

Messrs. Hayward & Tyler, of London, also supply a 30 horse-power boiler very similar in principle to that last described; both makers claim economy in fuel in addition to other advantages for their systems.

FEED ARRANGEMENTS.—The boilers are supplied with water both by force pumps and injectors, which can be used either together or separately.

DONKEY PUMPS.—Messrs. Carratt, Marshall, & Co., of Leeds, send a direct-acting donkey pump. It is furnished with suctional and compressional air-vessels. The piston of a 6" steam cylinder drives a $4\frac{1}{4}$ " plunger with an 8" stroke. The makers state that the pump can conveniently make 90 strokes per minute.

The second donkey pump is made by Messrs. Brown, Wilson, & Co., of London, it is compact and of simple construction. Like the former one, it is direct acting; a $4\frac{5}{8}$ " steam piston with an 8" stroke drives a $2\frac{3}{4}$ " plunger. The makers give from 100 to 150 strokes per minute as the rate at which it should be worked. The valve of the steam cylinder is

driven direct from a cam on the main shaft of the fly-wheel which passes through the valve-box.

INJECTORS.—Messrs. Sharp, Stewart & Co., of Manchester, have supplied an injector to feed the three Galloway's boilers; it is on the well-known Gifford principle, but is modified with a view to the removal of all packing from the interior of the instrument, an arrangement which would appear to be desirable.

Mr. Andrew Barclay, of Kilmarnock, exhibits also a modified form of injector, which has for its object increasing the depth of suction at which the instrument will work, and permitting a higher temperature than usual of feed water to be used.

Messrs. E. Green & Sons, of Wakefield, have fitted up a fuel economiser. The principle of the apparatus is to absorb any surplus heat left in the gases and air after they have ceased contact with the boilers, and to utilise it by raising the temperature of the feed water; this is effected by causing the latter to circulate through a series of tubes placed in the flue leading from the boiler-house to the chimney. The efficiency of the apparatus obviously depends on the temperature at which the gases leave the boilers.

STEAM PIPES.—The boilers supply steam through a 10" pipe common to the group at a boiler pressure of 60 lbs. to the square inch, which will be reduced in the building. The diameter of the main exhaust pipe is 15"; the flanges of the latter are not turned, the joints being made with india-rubber washers, supplied by the North British Rubber Company.

The steam pipes inside the boiler-house in connection with Messrs. Galloway's boilers are covered with Spence's patent nonconducting composition, the nature of which is such that it accommodates itself to the varying expansion of the pipes. It is composed of the best nonconducting materials pounded and mixed together. They are applied to the pipes when under steam, in the shape of a plaster, forming successive layers to the required thickness.

Inside the Palace the pipes are covered by Messrs. Croggon with their inodorous hair felt, which is laid round the pipe and held in its place by a sewn leather cover.

Besides those attached to the boilers a main stop valve is placed just within the building, so that the whole steam supply can, if required, be cut off; stop valves are also introduced at the points of departure of the 6" mains, and thus the supply of steam to each section can be controlled.

The alteration in length of the steam pipes owing to change of temperature is provided for by stuffing box expansion joints. These, together with the steam troughs, shafting, pulleys and universal joints, are made by Messrs. Bryan Donkin & Co., of London.

The steam traps for catching the condensed water from the pipes are of simple construction and efficacious.

UNIVERSAL COUPLINGS.—The universal couplings are a modification of the ball and socket joint with moveable feathers; their position rendered it desirable that a neat appearance should be observed, and it was also of importance, if possible, so to design the coupling that it should present nothing which would be liable to cause accidents by catching.

The use of any form of universal coupling except bevelled wheels (which were inadmissible) causes a variation in the relative rates of the shafts so coupled, but owing to the smallness of the angle of deviation this, in the present instance, is of no practical moment.

SHAFTING.—The shafting is of three sizes, viz.: 3½", 3", and 2½" diameter, and, running at 120 revolutions per minute, receives its motion by means of belting from the prime movers.

BELTING.—The belts are supplied by four manufacturers.

The India-rubber, Gutta-percha, and Telegraph Works Company use vulcanised india-rubber and canvas, the latter being made of the best sea island American cotton; the belts are cut from one piece of canvas, and having been prepared with india-rubber are subject to pressure in the course of vulcanising.

The North British Rubber Company make their straps of the first quality of cotton canvas, known as American navy cloth; it is arranged in plies according to the strength required, and cemented together with india-rubber, the outside layer of which is specially prepared; the system of india-rubber and canvas is then vulcanised, and thereby put into a fixed condition unaffected by wet or changes of temperature.

The Tanned Leather Company of London send belts made from the best oak bark tanned leather. They exhibit also an edge laid 12" strap, which is formed from strips of leather, cut to the required thickness, and laid edgewise, they are joined together by transverse pieces passing through the width of the belt; by this method a uniform band may be made of indefinite length.

Messrs. Hepburn, of London, also supply straps. They are made of the middle of English ox hides and tanned with oak bark only, the leather having been cut and stretched, and hand-sewn.

DRIVING ENGINES.—The cotton spinning machinery is driven by a pair of horizontal non-condensing coupled engines, made by Messrs. Galloway and Sons. They are together of 100 horse-power, with 26" cylinders and 3' stroke; the working parts are contained within the bed plate, which is a single casting; the slide valves are on the usual system, and cut on the steam edge for expansion. Bessemer steel enters largely into the construction of these engines, which have been specially designed with a view to simplicity, strength, and compactness.

Messrs. Hick, Hargreave, and Co., of Bolton, send an engine which is fitted with Corliss's

patent valve-gear; the diameter of the steam cylinder is 16" with a 3' stroke; this valve-gear cuts off the steam at the required point almost instantaneously; it is effected by a trigger action set free through the intervention of the eccentric; the valves are cylindrical slides, and the cylinder is provided with a separate steam and exhaust valve at each end. The latter are kept open the full period of the stroke, while the former are closed by the governor at points depending on the load on the engine, thus no throttle valve is required. The engine shown is high pressure, but the system is equally capable of being applied to a condensing engine.

Messrs. Fox, Walker & Co., of Bristol, drive a couple of lengths of shafting with a nominal 10 horse-power engine, having a steam jacketed 10" cylinder with a 14" stroke; it is furnished with a separate expansion valve, which can be varied at will while the engine is running; the upper surface of the bed plate is planed to receive the various fittings, and the reciprocating parts are carefully balanced.

Messrs. Ransomes & Sons, of Ipswich, drive two separate lengths of shafting with a couple of their portable agricultural engines, exhibiting two classes of manufacture. The engines are not shown furnishing their own steam, which is supplied from the main.

One engine with a 9" cylinder and 12" stroke is fitted with an ordinary slide, and has no special expansion apparatus; it represents that type of machine which is sought for by those who study simplicity of parts and cheapness of first cost rather than economy of fuel.

The second engine has double cylinders of 9" diameter and 12" stroke, the grade of expansion variable from one-seventh to one-third the length of the stroke is effected by a separate expansion valve; the cylinders and covers are jacketed, and the feed arrangements such that the water enters the boiler at a very high temperature.

Mr. C. T. Porter exhibits an Allen engine made by the Whitworth Company, of Manchester, which is chiefly remarkable for the high speed at which it runs, 200 revolutions a minute, and for the peculiarity of the valve gear. As in Messrs. Hicks's engine, the throttle valve is done away with, and a variable rate of expansion obtained by putting the slide valve in connection with the governor.

The cylinder is fitted at each end with two valves; the action of the exhausts are invariable, the steam valves are in equilibrium, and so arranged as to make four openings at the same time into the steam port.

This engine has a 12" cylinder with a 24" stroke, and is furnished with a condenser; the usual form of air pump and plunger is replaced by a single acting ram which works direct from the piston.

The whole of the parts in motion are very carefully balanced, and the various wearing surfaces made large, in order, as far as possible, to meet the requirements of a high speed engine.

The Whitworth Company state that as regards economy of fuel, this system gives excellent results.

TRACTION ENGINES.—Messrs. Aveling & Porter, of Rochester, and Messrs. Fowler, of Leeds, offer traction engines which are capable of dragging very heavy weights on ordinary roads; these machines are readily and certainly controlled, and while much more powerful, are more easily managed than a team of horses.

Where railways are not available, and heavy goods require to be moved, it is probable that steam power will be increasingly employed. Paris horses pay little attention to the steam rollers in constant use there, and traction engines are certainly not more terrible. Messrs. Ruston, Procter & Co., of Lincoln, have placed one of their small locomotives at the disposal of the British Executive.

LIFTING APPARATUS.—The entrance of the heavy pieces of machinery into the building, and the general manipulation of the packages of goods, has been much simplified by the use of steam travelling cranes; indeed, the facilities of despatch thereby afforded could have been got in no other way. Five steam cranes have been placed at the disposal of the executive commission.

The crane supplied by Messrs. James Taylor & Co., of Birkenhead, is fitted, in common with the others, with double cylinders, and its gear is so arranged that the whole of the motions of the jib, including elevating and depressing, are performed by steam, under the control of one man; the crane is also self moving, and can be used as a locomotive.

Messrs. A. Shanks & Son lend a 6 ton crane, which, though portable, is not self-propelling; it is readily under the control of one man, and works ordinarily at a pressure of 60 lbs. per square inch.

Messrs. Russell exhibit a 5 ton crane, the swinging gear of which is so arranged, that should the jib, while in motion, come in contact with any obstacle, the turning action is suspended, and a breakage avoided.

Messrs. Appleby Brothers send a crane fitted with a Derrick jib; like the others, the whole of its movements can be controlled by a man or an intelligent boy from the foot plate, and the machine can be moved longitudinally by steam.

Messrs. Bowser & Cameron also exhibit in Class 52 steam lifting apparatus. Well-constructed steam cranes do not consume more than about half a cwt. of coal per hour, and as one person can work them, the cost of moving any considerable quantity of goods by their agency becomes very small.

Messrs. Tange Brothers, of Birmingham, lend Weston's differential pulley blocks and hydraulic jacks; in the latter great compactness, combined with strength, is obtained by substituting the principle of the hydraulic press for the rack and pinion gear usually employed.

FRED. BEAUMONT, Capt. R.E.

A. V. & P., 72 Cannon-street, London, E.C.
Works at Rochester, Kent.

Laminas y Planchas de acero y Maquinas para acepillar Laminas y Planchas. Apuradores. Planchas de bronze perforadas para Apuradores. Lizos. Maquinas para cortar en hojas el papel. Feltros y Telas. Valvulas resbaladizas para agua y gas.

Machine Brevetée pour Couper les Chiffons, Cordages, etc.
Maquina Patente para cortar Trapos, Cordages, &c.

Cette machine est construite dans le but d'obtenir une plus grande uniformité dans la grandeur des pièces; et d'éviter le déchet qui est occasionné par les coups violents et déchirants qui ont lieu dans les machines actuelles.

L'action de couper se fait par le moyen d'un couteau placé dans le sens transversal de la machine; à ce couteau deux autres sont attachés à angle droit; tous trois descendent sur une plaque et coupent la substance présentée, en long et en travers en même temps, tranchant nettement les chiffons sans choc, et conséquemment sans aucun déchet des fibres. En effet, la manière de couper est analogue, en principe, à celle si bien connue dans les machines employées pour couper et rogner le papier en rames, et le tranchant des lames résiste aussi bien dans l'un comme dans l'autre cas. On peut faire couper avec une de ces machines environ 5,000 à 6,000 kilogrammes de chiffons ou de cordages par jour de douze heures.

Esta maquina se ha construido con el objeto de obtener mas uniformidad en el tamaño de los pedazos; y de evitar la merma causada por los golpes violentos y desgarrantes que tienen lugar en las maquinas actuales.

La accion de cortar se hace por medio de un cuchillo puesto en la direccion transversal de la maquina; á este cuchillo estan atacados dos otros en angulo recto; todos tres descenden sobre una plancha y cortan la sustancia, que se presente, á lo largo y de través al mismo tiempo, trinchando limpiamente los trapos sin choque, y por consiguiente sin merma ninguna de las fibras. En verdad, la manera de cortar es analoga, en su principio, á la que se conoce perfectamente en las maquinas empleadas para cortar y cercenar el papel en resmas, y el corte de las hojas resiste igualmente bien en los dos casos. Si puede cortar con una de estas maquinas de 5,000 á 6,000 kilograma de trapos ó cordage por día de doce horas, oco mas ó menos.

NORTH BRITISH RUBBER COMPANY (LIMITED), *Castle Mills, Edinburgh, Scotland.**London Warehouse, 4 Cannon-street, E.C.; Manchester Warehouse, 8 Spring-gardens.*

Manufacturers of Vulcanised Indiarubber for Machine Belting, Hose, and Mechanical Appliances; also for Overshoes, Clothing, Air Cushions, Elastic Webbing, Vulcanite, &c. &c.

Holders of Prize Medal from London Exhibition of 1862.

PATENT MACHINE BELTING.

Their patent machine driving-belts are manufactured from the best American cotton canvas, cemented in layers by vulcanised india-

rubber, and covered by a specially prepared compound of rubber, whereby a smooth even

surface is obtained. They are very durable, unaffected by damp or exposure, and unequalled for main or heavy driving belts. They can be made of any width and thickness, and therefore of any strength; and for large belts are *very much cheaper* than either leather or gutta percha. The tensile strength is very great; a single strip of the canvas one inch wide will bear a weight of 120 lbs., or 54 kilos. The resistance to slip round the pulley is very much greater than leather, as may be seen from the following results of experiments, made to determine this, the *most valuable* property of a driving belt. The high percentage of useful effect thus obtained is due to the *compressible* elasticity of the surface, a quality not attainable by any other material suitable for this purpose.

These belts, as furnished to Her Majesty's Commissioners, may be seen transmitting power to the main shaft in Class 52, British section.

EXPERIMENTS.

In the accompanying diagram, A represents a frame, carrying a shaft, with three pulleys, B, C, D. The pulleys are fast on the shaft, and the latter may be fast, or free to revolve, as the experimenter may choose. The pulley B was covered with rubber, C polished iron, such as is ordinarily used for transmitting motion by straps, and D covered with leather. The belts to be tested for slip were successively hung over these pulleys, and made to carry, in the first series of experiments, a tension weight at each end of 32 lbs. Weights, G, were then added until the belts began to slip. The results were as follows:—

	Leather Belt slipped at <i>La Courroie de Cuir glissa à Lederriemen schlüpfte mit</i>	Rubber Belt slipped at <i>La Courroie de Caoutchouc glissa à Caoutchouc-Riemen schlüpfte mit</i>	Ratios of surplus weights required to produce slip <i>Proportions de poids de surplus nécessaires pour produire le glissement Verhältniss von Mehrgewicht hierzu erforderlich</i>
	lbs.	lbs.	Leather Cuir Leder Rubber Caoutchouc Caoutchouc
Experiment No. 1 on polished iron pulley— <i>Expérience No. 1 sur poulie en fer poli—Versuch No. 1 mit Kolben von polirtem Eisen*</i>	48	90	1·000 @ 3·625
Experiment No. 2 on belting 2½ inches wide on polished iron pulley, 12 inches diameter, tension weights 30 lbs. each— <i>Expérience No. 2 sur courroie de 2½ pouces de large (6c. 35) sur poulie de fer poli, de 12 pouces (30c. 48) de diamètre, poids de tension, 30 livres (13 kilos. 620) chaque—Versuch No. 2 mit Riemen 2½ Zoll breit auf Kolben von polirtem Eisen, 12 Zoll Durchmesser, Dehnungsgewicht je 30 Pfund</i>	47	79	1·000 @ 2·882

* The results with covered pulleys were also much higher for rubber than for leather belts.

The superiority of rubber belting is thus clearly shown. The results show that the resistance to slip is about *three times* greater than that of leather belting.

Résultats qui prouvent clairement la supériorité des courroies en caoutchouc. Ils démontrent que la résistance contre le glissement est environ trois fois plus grande que celle des courroies en cuir.

Die Ueberlegenheit von Caoutchouc ist demnach zur Genüge bewiesen. Die Resultate zeigen den Widerstand des Schlüpfens ungefähr *drei Mal* grösser als jenen der Lederriemen.

NORTH BRITISH RUBBER COMPANY (LIMITED), Castle Mills, Edinburgh, Scotland.

London Warehouse, 4 Cannon-street, E.C.; Manchester Warehouse, 8 Spring-gardens.

Fabricants de Caoutchouc Vulcanisé pour Courroies de Machines, Tuyaux, et Applications Mécaniques; ainsi que pour Claques, Vêtements, Coussins à Air, Tissus Élastiques, Vulcanite, etc. etc.

Fabricanten von vulcanisirtem Caoutchouc für Maschinenriemen, mechanische Apparate; ebenso für Ueberschuhe, Kleider, Luftkissen, elastische Gewebe, Vulcanite etc. etc.

Ont obtenu une Médaille à l'Exposition de Londres de 1862.

Inhaber der Preismedaille der Londoner Ausstellung von 1862.

COURROIES POUR MACHINES, BREVETÉES.

Leurs Courroies de Machines, brevetées, sont fabriquées avec la meilleure toile de coton d'Amérique, cimentée, en couches avec du caoutchouc vulcanisé, et recouverte d'une composition de caoutchouc préparée spécialement pour cet usage, au moyen de quoi on obtient une surface lisse et égale. Elles sont très-durables, nullement affectées par l'humidité ou l'exposition à l'air, et sans égales pour les courroies principales ou ayant à faire mouvoir des poids lourds. Elles peuvent se fabriquer de toutes largeurs et épaisseurs, et par conséquent de toutes forces, et sont, pour les larges, *considérablement* meilleur marché que celles en cuir ou en gutta-percha. Leur force de tension est fort grande; une simple bande de cette toile de un pouce—2 c. 54—de large supportera un poids de 120 livres, ou 54 kilos. La résistance contre le glissement autour de la poulie est beaucoup plus grande que celle du cuir, ainsi qu'on le verra d'après les résultats suivants d'expériences faites pour déterminer le degré de cette qualité; *la plus importante* d'une courroie motrice. La proportion très-élevée d'effet utile ainsi obtenue est due à l'élasticité compressible de la surface, qualité qui ne peut être obtenue avec nulle autre substance convenant pour cet usage.

Ces courroies, telles qu'elles ont été fournies aux Commissaires de Sa Majesté, peuvent être vues fonctionnant dans la Classe 52 de la Section Anglaise, où elles transmettent la puissance motrice à l'arbre principal.

EXPÉRIENCES.

Dans le diagramme ci-contre, A représente une charpente supportant un arbre avec trois poulies B, C, D. Les poulies sont fixes sur l'arbre, qui peut être également fixe, ou libre de tourner, au choix de l'expérimentateur. La poulie B était recouverte de caoutchouc, C en fer poli, tel qu'on se sert ordinairement pour la transmission du mouvement par des courroies, et D recouverte de cuir. Les courroies qui devaient être éprouvées pour le glissement furent successivement suspendues sur ces poulies, ayant, dans la première série d'expériences, un poids de tension à chaque extrémité de 32 livres—14 kilos. 528. Des poids furent alors successivement ajoutés jusqu'à ce que les courroies commençassent à glisser. Les résultats sont donnés page 186.

PATENT MASCHINEN-TREIBRIEMEN.

Selbe sind von bestem Amerikanischen Baumwoll-Canvas, mit Lagen von vulcanisirtem Caoutchouc bedeckt und ausserdem mit einer besonders Auflösung aus Caoutchouc vollendet, was eine gleichmässige und ebene Oberfläche sichert. Sie sind dauerhaft, der Feuchtigkeit nicht ausgesetzt und besser als irgend andere Haupt- oder Bewegungs-Riemen. Man kann sie von jeder Breite und Dicke, deshalb jeder Stärke, herstellen; und lange derartige Riemen sind *bedeutend wohlfeiler* als jene von Leder oder Guttapercha. Die dehnbare Stärke ist bedeutend; ein einfacher Streifen von Canvas, 1 Zoll breit, trägt ein Gewicht von 120 Pfund oder 54 Kilos. Der Widerstand bei Bewegung um den Kloben ist stärker als der Lederriemen, was aus den folgenden gemachten Versuchen hervorgeht, und dies ist die *am meisten zu schätzende* Eigenschaft eines Radriemens. Das grosse Verhältniss der Dehnungsfähigkeit ist der *zusammendrückbaren* Elasticität der Oberfläche zuzuschreiben, eine Eigenschaft, von keinem andern verwendbaren Materiale besessen.

Die Riemen, welche Ihrer Majestäts Commissaire geliefert, sind verwendet, um den Hauptschaft in Klasse 52 der Britischen Abtheilung in Gang zu setzen.

EXPERIMENTE.

In der nebenstehenden Zeichnung stellt A das Gerüst, mit Schaft, und drei Kolben, B, C, D, tragend, vor. Die Kolben sind an dem Letztern befestigt, und dieser selbst kann entweder fest oder drehbar nach Wahl des Versuchsanstellers sein. Der Kolben B war mit Caoutchouc, C mit polirtem Eisen, als gewöhnlich zum Gange von Riemen, und jener D mit Leder bedeckt. Die zu prüfenden Riemen wurden der Reihenfolge nach über diese Kolben gehängt und hatten während der ersten Serie der Versuche ein Dehngewicht von je 32 Pfund zu tragen, welches alsdann vermehrt wurde, bis die Riemen zu schlüpfen angingen. Die Resultate waren, wie auf Seite 186 angegeben.

GALLOWAY, W. & J., & SONS, *Knott Mill Iron Works, Manchester.*

Three Patent 'Galloway' Boilers, 46 Horse Power each, and
Pair of 50-Horse Horizontal Engines, Cylinders 26 in. diameter, 3 ft. stroke.

Fig. 1.

Fig. 2.

The Three Boilers here exhibited (constructed as per section fig. 1), have been supplied to the Commissioners of the British Executive, for the purpose of generating steam required for driving the engines in the English Department, and may be seen at work in the Boiler House adjoining, together with a *model* showing the internal arrangement.

The chief feature of these well-known Boilers is in the arrangement of the back flue, the two furnaces being formed into one (as per fig. 1), in which a number of Vertical Cone Tubes are placed; thereby giving strength to the flue, and greater surface for the flame to impinge against: by this arrangement the generating power of the boiler is considerably increased, and the consumption of smoke effected. A thorough circulation of water is also promoted.

The Patent Tubes are now extensively used for introduction into *existing Boilers*, either single or double flued, and with the most beneficial results (as per fig. 2). They not only add considerably to the steam-producing power of the Boilers, but strengthen the flue so effectually as to render hooping with tee or angle iron unnecessary.

Upwards of 35,000 of these tubes are now at work throughout the United Kingdom.

Price of Patent Cone Tubes (for use on the Continent).
If not exceeding 3 ft. long,45s. each nett.
Delivered free in London, Liverpool or Hull.

Les Trois Chaudières exposées (construites d'après la section fig. 1) ont été fournies à la

Commission Anglaise, pour produire la vapeur nécessaire à la mise en mouvement des machines dans la Section Anglaise de l'Exposition, et peuvent se voir fonctionnant dans le local *ad hoc* contigu, ainsi qu'un *modèle*, qui en montre la disposition intérieure.

Le caractère distinctif de ces Chaudières bien connues consiste dans la disposition du conduit de derrière, les deux fourneaux étant réunis en un seul (ainsi que le montre la fig. 1), dans lequel est placé un certain nombre de Tubes Coniques Verticaux; disposition qui donne plus de force de résistance au conduit, et offre une plus grande surface d'action à la flamme; en outre la puissance de production de la chaudière se trouve considérablement accrue, et la fumée se consume d'elle-même.

La circulation de l'eau d'une façon complète résulte aussi de cet arrangement.

Les Tubes Coniques, Brevetés, sont maintenant largement employés afin de les appliquer à *celles existant déjà*, qu'elles soient à un ou à deux conduits, et toujours avec les résultats les plus avantageux (voyez fig. 2). Non seulement ils accroissent considérablement la puissance de production de vapeur des chaudières, mais en outre ils renforcent le conduit d'une manière si efficace qu'il devient inutile de le relier avec du fer d'angle ou en T.

Plus de 35,000 de ces tubes fonctionnent déjà dans le Royaume-Uni.

Prix des Tubes Coniques, Brevetés (pour usage sur le Continent).
Nedépassant pas 3 pieds (0m. 91c.) de long, 54 fr. chaque, net. Délivré sans frais à Londres, Liverpool ou Hull.

APPLEBY BROTHERS, *Engineers, Contractors to Her Majesty's Government, &c.*

Emerson-street, Southwark, London, S.E.

Makers of Steam Cranes, Hoisting, Pumping, and Contractors' Machinery, &c.

Constructeurs de Grues à Vapeur, Machines à Hisser, à Pomper, Machines pour Entrepreneurs, etc.

Steam and hand crane, lifts 6 tons (6,000 kilo.), turns round in either direction without stopping or reversing the engines; travels and alters radius of jib, all by steam, or works in all motions by hand. Selected by the British Commission for unloading and placing the heavy packages, and for removing them at the close of the Exhibition; used for that purpose from February 1867.

Price, as exhibited, 425*l*.

Donkey engine, extra 10*l*. 5*s*.

Crane to lift 3 tons, and turn by steam, 250*l*.

" " 2 tons, and turn by steam, 200*l*.

Self-acting skip for ballast, minerals, &c. 9*l*. 5*s*.

STEAM PUMPS OR DONKEY ENGINES.

These Pumps are cheap, durable, and so simple that an unskilled workman can use them. The working parts and valves are of hard gun-metal and hardened cast-steel. They may be fixed vertically or horizontally, and used for feeding boilers, as fire-engines, or for lifting and forcing hot liquors. Every pump is tested in steam before being sent out.

POMPES A VAPEUR OU POMPES ALIMENTAIRES.

Ces Pompes sont bon marché, durables, et d'une construction tellement simple qu'un ouvrier même ignorant peut s'en servir. Les pièces fonctionnantes et les soupapes sont en bronze et en acier fondu. On peut les monter verticalement ou horizontalement et s'en servir également comme pompes d'alimentation, pompes à incendie ou pour pomper et refouler les liquides de toutes espèces, même les liquides chauds. Chaque pompe est éprouvée à vapeur avant de

Grue à vapeur ou à la main, force 6,000 kilo., oriente à l'un côté ou à l'autre sans arrêter ou changer la course de pistons, marche, et lève ou baisse la flèche; tous les mouvements se font à vapeur ou à la main. Cette machine a été choisie par la Commission Britannique pour faire le service du déchargement et du placement des pièces lourdes à l'Exposition de 1867, et a fonctionné depuis février dernier.

Prix 425*l*. (fr. 10,620).

SWANN, J. R., 21 Leith-walk, Edinburgh, Scotland.

SWANN'S PATENT SAFETY-VALVE.

(Secured by Royal Letters Patent in 1866: Great Britain, France, Belgium, and United States.)

This valve is the ordinary steam valve, until *undue weight* is applied, when it *becomes* a safety valve.

Firemen are unable to tamper with this valve, either with steam *off* or *on*.

Indicates deficiency of water in boiler.

The insecurity to life and destruction to property, arising from over-pressure or deficiency of water, are *completely guarded against*.

No steam-boiler should be without it.

The valves are tested according to pressure wanted before being sent out.

When ordering valve, please give diameter of boiler, and stipulate pressure of steam.

Can be seen in operation at 21 Leith-walk, Edinburgh.

Descriptive and priced circular on application.

J. R. SWANN.

'Constructed upon a good principle, and addition to weight upon the lever will *actually* relieve the pressure.'—*Mechanics' Magazine*, Nov. 1866.

'Only requires to be known to be *universally* adopted.'—*Engineer*, Nov. 1866.

'Claims a decided advantage over the valves at present in use.'—*English Mechanic*, Nov. 1866.

Cette soupape fait l'office de la soupape à vapeur ordinaire jusqu'à ce qu'un *poids indu* soit appliqué; alors elle se *transforme* en soupape de sûreté.

Que la chaudière soit *en vapeur* ou *non*, les chauffeurs ne peuvent déranger en rien le mécanisme de cette soupape.

Elle indique l'insuffisance d'eau dans la chaudière.

Elle est une sauvegarde complète contre les dangers pour la vie et la destruction de propriété qui peuvent résulter d'un excès de pression, ou d'insuffisance d'eau.

Nulle chaudière à vapeur ne devrait s'en passer.

Les soupapes sont éprouvées selon la pression requise avant d'être expédiées.

On est prié de donner, en faisant la commande, le diamètre de la chaudière et de préciser la pression de vapeur.

Cette soupape peut être vue fonctionnant à 21 Leith-walk, Edimbourg.

Circulaire contenant description et prix sur demande.

J. R. SWANN.

'Construite d'après un bon principe, et l'addition faite au poids sur le levier allégera *positivement* la pression.'—*Mechanics' Magazine*, Nov. 1866.

'N'a besoin que d'être connue pour être *universellement* adoptée.'—*Engineer*, Nov. 1866.

'Revendique le mérite d'offrir un avantage décidé sur les soupapes à présent en usage.'—*English Mechanic*, Nov. 1866.

Also in operation, Boiler House, British Department, Exhibition, Paris.

CLASS LIII.

BOULTON, SAMUEL BAGSTER,

Of the Firm of BURT, BOULTON, & HAYWOOD, 39A King William-street, London, E.C., and
54 Rue Caumartin, Paris.

Patent Improved Apparatus for Preparing Timber against Decay.

Appareil Perfectionné, Breveté, pour la Conservation des Bois.

Patentirter verbesserter Apparat, um Holz vor Fäulniß zu schützen.

Apparato Perfezionato Patentato per la Conservazione di Legname.

By means of this apparatus, timber can be prepared by vacuum and pressure in iron cylinders even where the antiseptic agent employed (such as sulphate of copper, corrosive sublimate, &c.) is of such a nature as would destroy the iron cylinder, if used in the ordinary manner. The pressure is applied by compressed air, and is more speedily and more perfectly obtained than by the methods hitherto in use. MESSRS. BURT, BOULTON, & HAYWOOD, have for many years past devoted their attention to the preservation of timber by various processes; they supply and deliver upon the ground all kinds of sleepers and timber, for railways, public works, and general constructions, and undertake to erect complete sets of timber-preserving apparatus, and to work them by contract in any part of Europe.

Durch dessen Anwendung kann Holz in eisernen Cylindern durch Entleerung und Druck, wo selbst die antiseptischen verwendeten Mittel (als blauer Vitriol, ätzende Sublimate u. s. w.), wenn in anderen Cylindern von Eisen, dieselben zerstören würden, so hergestellt und geschützt werden. Der Druck wird durch comprimirte Luft hervorgebracht und ist schneller und nachdrücklicher, als durch die bisher befolgte Verfahrungsweisen. Die Herren BURT, BOULTON & HAYWOOD haben seit einer Reihe von Jahren ihre Aufmerksamkeit der Bewahrung von Holz durch verschiedene Processe zugewendet; sie liefern an die aufgegebene Oertlichkeit alle Sorten Schwellen und Bauholz für Eisenbahnen, öffentliche und andere Bauten und vollständige Apparate zur Bewahrung von Holz und überwachen deren Bearbeitung bei Contract in ganz Europa.

Au moyen de cet appareil les bois de charpente peuvent être préparés par la production du vide et la pression, dans des cylindres en fer, même alors que l'agent antiseptique employé (tel que sulphate de cuivre, sublimé corrosif, etc.) est de nature à détruire le cylindre si on s'en servait de la manière habituelle. La pression s'exerce au moyen de l'air comprimé, et s'obtient plus rapidement et d'une façon plus parfaite que par la méthode en usage jusqu'alors. MM. BURT, BOULTON et HAYWOOD ont, depuis de nombreuses années, consacré leur attention à la conservation des bois de construction au moyen de procédés divers; ils fournissent, rendu sur le terrain, toutes sortes de traverses et bois de charpente pour chemins de fer, travaux publics, et constructions en général et se chargent de l'érection de systèmes complets d'appareils à conserver les bois ainsi que de les faire fonctionner, par entreprise, en toute partie de l'Europe.

Per mezzo di questo apparato il legname può essere preparato a vacuo e pressione in cilindri di ferro, anche quando l'antisettico usato (come il solfato di rame, il sublimato corrosivo, ecc.) sia di tal natura che distruggerebbe il cilindro di ferro se fosse adoperato nel modo ordinario. La pressione è applicata ad aria compressa, e si ottiene più speditamente e più perfettamente che cogli altri metodi fin qui in uso. I Sigr. BURT, BOULTON e HAYWOOD hanno già da molti anni dedicata la loro attenzione alla conservazione dei legnami con vari processi; essi forniscono e consegnano a destinazione ogni specie di traversine e legname per ferrovie, lavori pubblici, e costruzioni in generale, e intraprendono l'erezione di un sistema completo di apparati per la conservazione dei legnami, e di tenerli in attività, previo contratto, in qualunque parte di Europa.

MERRYWEATHER & SONS *Long Acre, w.c., and Lambeth, s., London,*

Manufacturers of—

Steam land, floating and fixed fire-engines of various sizes.

Hand-power fire-engines of all descriptions, of various sizes.

Copper riveted leather, woven canvas, and india-rubber hoses, suction-pipes and buckets.

Fire-escapes, hose reels, helmets, fire-cocks, and everything connected with fire-extinguishing, *all suitable for any climate.*

The following FIRST PRIZES have been awarded to MERRYWEATHER & SONS, for THE BEST Fire Engines:—

The First Grand Prize (250l.) for the best steam fire engine—Crystal Palace competition, 1863; the Netherlands Prize Medal and Money Prize, 1864; the First Grand Prize (500 thalers) for the best steam fire engine—Colognè competition, 1865; First Prize Medal, Dublin Exhibition, 1865; First Prize Medal, Great Exhibition, 1851; First Prize Medal, Paris Exhibition, 1855; First Prize Medal, International Exhibition, 1862.

MERRYWEATHER & SONS' Improved 'Patent

Fabricants de—

Pompes à incendies à vapeur de terre, flottantes et fixes, de diverses dimensions.

Pompes à incendies fonctionnant à la main, de toutes sortes et de diverses dimensions.

Tuyaux de refoulement, et d'aspiration, et seaux, en cuir rivé à rivets de cuivre, en toile, et en caoutchouc.

Appareils de sauvetage, dévidoirs à tuyaux, casques, robinets, et tous articles relatifs à l'extinction des incendies, *tous convenant pour tous climats.*

LES PREMIERS PRIX suivants ont été décernés aux MM. MERRYWEATHER et FILS, pour LES MEILLEURES Pompes à incendies:—

Le Premier Grand Prix (250l.) pour la meilleure pompe à incendie à vapeur—concours de Palais de Cristal, 1863; la Médaille, et le Prix en argent, de la Hollande, 1864; le Premier Grand Prix (500 thalers) pour la meilleure pompe à incendie à vapeur—concours de Cologne, 1865; Médaille de Première Classe, Exposition de Dublin, 1865; Médaille de Première Classe, Grande Exposition, 1851; Médaille de Première Classe, Exposition de Paris, 1855; Médaille de Première Classe, Exposition Internationale, 1862.

Pompes à Incendies à Vapeur, 'ayant remporté le Premier Grand Prix,' brevetées, 'perfectionnées,' de MERRYWEATHER et FILS, sont largement employées par:

Le Gouvernement Anglais.

Le Gouvernement Français.

Le Gouvernement Russe.

Le Gouvernement Belge.

Le Gouvernement Espagnol.

Le Gouvernement Hollandais.

La Compagnie Métropolitaine de Pompiers de Londres, celle de Liverpool, et plusieurs de la province; et nombres de villes d'Allemagne, de Belgique, de Hollande, des Indes occidentales, de l'Amérique du Sud, l'Île du Prince Édouard, Manille, des Chemins de Fer, des Compagnies de Dock, etc. etc.

Ces machines produiront de la vapeur avec de l'eau froide, de façon à atteindre le degré de pression nécessaire pour fonctionner en huit minutes à partir de l'instant où le feu aura été allumé—sont munies de larges pompes à effet direct et double, de chaudières très-simples et très-durables, etc.

De six dimensions, poids et prix divers.

First Grand Prize' Steam Fire Engines are extensively used by—

The British Government.
The French Government.
The Russian Government.
The Belgian Government.
The Spanish Government.
The Dutch Government.

By the Metropolitan (London), Liverpool, and the several Provincial Fire Brigades, and Towns in Germany, Belgium, Holland, West Indies, South America, Prince Edward Island, Manilla, Railways, Dock Companies, &c. &c.

These fire-engines will raise steam from cold water to a working pressure in eight minutes from the time of lighting the fire—have large direct and double acting pumps, most simple and durable boilers, &c.

Of six various sizes, weights, and prices.

MERRYWEATHER & SONS, *Long Acre, w.c., and Lambeth, s., London,*

Fabricanten von

Dampf-Land-, Fluss- und stabilen Feuerspritzen von allen Grössen;

Handfeuerspritzen aller Arten, von verschiedenen Grössen;

Wasserschläuchen, Zugröhren und Feuer-eimern von Leder, gewebtem Segeltuch und Guttapercha, mit Kupfer vernietet;

Feuerleitern, Schlauchrollen, Feuerhelmen, Feuerhähnen und allen in Feuerlöschungen gebrauchten Gegenständen, für jedes *Clima sich eignend.*

Die folgenden ERSTEN PREISE sind MERRYWEATHER & SÖHNEN für die BESTEN Feuerspritzen zuerkannt worden:—

Der erste grosse Preis (250l.) für die beste Dampfweatherspritze auf der Preisbewerbung im Crystallpalaste im Jahre 1863; die Niederländische Preismedaille und Geldpreis in 1864; der erste grosse Preis (500 Thaler) für die beste Dampfweatherspritze, auf der Preisbewerbung zu Cöln in 1865; erste Preismedaille auf der Dubliner Ausstellung in 1865; erste Preismedaille auf der grossen Ausstellung in 1851; erste Preismedaille auf

der Pariser Ausstellung in 1855; erste Preismedaille auf der internationalen Ausstellung in 1862.

Die verbesserten 'patentirten Dampfweatherspritzen ersten Preises' von MERRYWEATHER & SÖHNE werden ausgebreitet angewandt von:—

Der Britischen Regierung;

der Französischen Regierung;

der Russischen Regierung;

der Belgischen Regierung;

der Spanischen Regierung;

der Niederländischen Regierung;

den Feuerbrigaden von London, Liverpool und von Provinzstädten, und von Städten in Deutschland, Belgium, Holland, Westindien, Südamerika, Prinz Edward-Insel, Manilla, Eisenbahnen, Docks-Compagnien u. s. w.

Diese Dampfweatherspritzen erzeugen Dampf von kaltem Wasser zu einer Arbeitsfähigkeit in acht Minuten von der Zeit, dass das Feuer angemacht wurde, haben grosse direct und doppelt wirkende Pumpen, die einfachsten und dauerhaftesten Dampfessel u. s. w.

Von sechs verschiedenen Grössen, Gewichten und Preisen.

MERRYWEATHER & SONS' Improved 'First Prize' Brigade Fire Engines, of different sizes, very extensively used by the Metropolitan (London), Liverpool, Dublin, Provincial, and Volunteer Fire Brigades; the British, and several foreign and colonial governments, Insurance Companies, Railways, Docks, Factories, Mansions, Plantations, &c.

Illustrated catalogues of all kinds of fire-engines for various purposes, &c., free on application.

Pompes à Incendies 'ayant remporté le Premier Prix,' perfectionnée, de MERRYWEATHER & FILS, de différentes dimensions, et largement employée par les Compagnies de Pompiers de Londres (Métropolitaine), Liverpool, Dublin, et de province; ainsi que par le Gouvernement Anglais, plusieurs Gouvernements étrangers et coloniaux, les Compagnies d'Assurances, et pour Chemins de Fer, Docks, Manufactures, Châteaux et Plantations.

Catalogues illustrés de Pompes à Incendies de toutes espèces, etc., gratis sur demande.

Die verbesserten Brigade-Feuerspritzen 'ersten Preises' von MERRYWEATHER & SÖHNE, von verschiedenen Grössen, werden ausgebreitet angewandt von den Londoner, Liverpooler, Dubliner, provinziellen und Volontair-Feuerbrigaden; den Britischen und verschiedenen andern fremden und Colonial-Regierungen, von Versicherungs-Gesellschaften, Eisenbahnen, Docks, Fabriken, Residenzen, Pflanzungen u. s. w.

Illustrirte Cataloge aller Arten Feuerspritzen für verschiedene Zwecke u. s. w. und gratis auf gefällige Anfrage zu haben.

PAUL, MATTHEW, & CO., *Levenford Works, Dumbarton, Scotland.*

Patent Friction Windlass—Guindeau à Frottement, breveté.

This windlass, exhibited in Class 53, No. 35, has been fitted in a number of vessels, and has given most complete satisfaction. Both capstan and windlass can be wrought by steam, and also by hand in the usual manner, when steam is not available. The principal improvements in this, as compared with other windlasses, are, the driving of the chain lifters by friction, and the direct application of steam-power. With this windlass fitted in a 2,000-ton ship 60 fathoms of chain have been taken in, and the anchor fished and catted complete in *eighteen minutes*.

Full particulars from the patentees and makers, as above.

Messrs. P. & Co. are also manufacturers of every description of steamship fittings, steam-engines, and general machinery. One of their winches, with pair double-action pumps, is exhibited in mouon, Class 53, No. 35. This winch is an exact duplicate of those supplied by Messrs. P. & Co. for the French mail steamers 'Péire' and 'Ville de Paris.'

Steam cranes, steam winches, steam capstans, donkey engines, crab winches, mast winches, distilling condensers, &c.; high-pressure engines and boilers for barges and pleasure boats; machines for ship-builders and boiler-makers; and stationary engines of every variety of size and arrangement. Illustrated catalogue and price list from MATTHEW PAUL & Co., engineers, millwrights, and boiler-makers, Levenford Works, Dumbarton, Scotland.

Ce guindeau, exposé dans la Classe 53, No. 35, et dont ont été munis de nombreux navires, a toujours donné la satisfaction la plus complète.

Cabestan et guindeau peuvent être mus l'un et l'autre par la vapeur, et à défaut, à main d'hommes selon la manière habitu-

elle. Le perfectionnement principal apporté dans la construction de ce guindeau consiste dans l'action des aussières des chaînes par le frottement, et dans l'application directe de la force de vapeur. Par son usage à bord d'un navire de 2,000 tonnes 60 brasses de chaîne ont été retirées, et l'ancre a été traversée et caponnée, complètement, dans l'espace de *dix-huit minutes*.

Pour explication détaillée s'adresser aux fabricants, brevetés, à l'adresse ci-dessus.

MM. P. et Cie. fabriquent également toutes espèces d'agrs pour navires à vapeur, de machines à vapeur, et généralement toutes sortes de machines. Un de leurs treuils, avec une paire de pompes à double action, est exposé et fonctionne dans la Classe 53, No. 35, et est un double exact de ceux fournis par MM. P. et Cie. aux Paquebots-poste français le 'Péire' et la 'Ville de Paris.'

Grues à vapeur, guindeaux et cabestans à vapeur, machines à remplir les chaudières, chèvres, treuils pour mâts, condensateurs à distiller, etc. Machines et chaudières pour chalands et bateaux de plaisir; machines pour constructeurs de navires et fabricants de chaudières; et machines fixes de toutes dimensions et de tous systèmes. Catalogue illustré et prix-courants en s'adressant à MM. MATTHEW PAUL et Cie., ingénieurs, constructeurs de moulins, et fabricants de chaudières, aux usines de Levenford, Dumbarton, Ecosse.

PAUL, MATTHEW, & CO., *Levenford Works, Dumbarton, Scotland.*

Winde mit patentirter Reibung—*Mulinello ad Attrito (patentato).*

Mit dieser Schiffswinde, welche in Klasse 53, No. 35, ausgestellt ist, ist eine Anzahl von Schiffen versehen worden, und sie hat die vollständigste Zufriedenheit gegeben.

Sowohl Gangspill wie Schiffswinde können durch Dampf getrieben werden, und ebenso durch Handarbeit auf die gewöhnliche Weise, wenn kein Dampf vorhanden ist. Die hauptsächlichsten Verbesserungen in dieser Schiffswinde, in Vergleich mit andern Winden, sind die Bewegung der Ziehkette durch Reibung und die directe Anwendung von Dampfkraft. Mit dieser Winde, mit welcher ein Schiff von 2,000 Tonnen versehen war, 62 Klafter Kette wurden eingenommen, und der Anker gefischt und angehakt, in *achtzehn Minuten*.

Volle Einzelheiten von den Patent-Inhabern und Fabricanten, wie oben.

Herren P. & Co. sind auch Fabricanten von jeder Beschreibung von Dampfschiff-Ausrüstungen, Dampfmaschinen und allgemeiner Maschinerie. Eine ihrer Winden, mit einem Paar doppelt wirkenden Pumpen, ist in Klasse 53, No. 35, in Bewegung, ausgestellt. Diese Winde ist ein genaues Duplicat der von Herren P. & Co. für die Französischen Postdampfschiffe 'Péire' und 'Ville de Paris' gelieferten Winden.

Dampfkrahne, Dampfwinden, Dampfgangspille, Hilfsmaschinen, Hebewinden, Mastwinden, Compressions-Maschinen für Destillation u. s. w.; Hochdruck-Dampfmaschinen und Dampfkessel für Böte und Vergnügungsböte; Maschinen für Schiffbauer und Kesselschmiede; und stehende Dampfmaschinen von jeder Verschiedenheit in Grösse und Einrichtung. Illustrirte Cataloge und Preislisten von MATTHEW PAUL & Co., Ingenieure, Schiffbauer und Kesselschmiede, Levenford Works, Dumbarton, Schottland.

Questo Mulinello esposto alla Classe 53, No. 35, è stato fissato in un gran numero di navi ed ha data la più gran soddisfazione. Tanto l'argano quanto il mulinello può esser messo in azione dal vapore, ed anche a mano nel solito modo quando il vapore non è utilizzabile. I principali perfezionamenti in questo paragonato cogli altri mulinelli, sono la trazione delle corde delle catene per attrito, e l'applicazione diretta della forza del vapore. Con questo mulinello fissato in una nave di 2,000 tonnellate, 60 passi di catena sono stati tirati su, e l'ancora pescata e capponata completamente in *diciotto minuti*. Pieni dettagli dai patentati e fabbricanti come sopra.

I Sigri. P. e Cia. sono anche fabbricanti di ogni genere di fornimenti per battelli a vapore, motori a vapore e meccanismi in generale. Una delle loro manivelle con paio di pompe a doppia azione, è esposta in attività, Classe 52, No. 35. Questa manivella è una copia esatta di quelle fornite dai Sigri. P. e Cia. per i piroscafi postali francesi 'Péire' e 'Ville de Paris'.

Gru a vapore, arganelli a vapore, argani a vapore, macchine donkey, argani volanti, arganelli da albero, condensatori da distillazione, ecc. Motori e caldaie per barconi e barche di piacere; macchine per costruttori navali e fabbricanti di caldaie; e motori fissi di ogni varietà di grandezza e disposizione. Cataloghi illustrati e liste di prezzi da MATTHEW PAUL & CIA. ingegneri, macchinisti e fabbricanti di caldaie, Levenford Works, Dumbarton, Scozia.

ROYAL SOCIETY FOR THE PROTECTION OF LIFE FROM FIRE.

Fire-escape as used by the Royal Society for the Protection of Life from Fire. Built with all modern registered improvements, by Mr. George Clarke, London. (Original inventor, Mr. Abraham Whivell.)

The main ladder reaches from 30 to 35 feet, and can instantly be applied to most second-floor windows by means of the carriage lever. The upper ladder folds over the main ladder, and is raised easily in the position represented by a rope attached to its lever irons on either side of the main ladder, or, as recently adopted in one or two of the escapes, by an arrangement of pulleys in lieu of the lever irons. The short ladder, for first floors, fits in under the carriage, and is often of the greatest service. Under the whole length of the main ladder is a canvas trough or bagging, made of stout sailcloth, protected by an outer trough of copper gauze, leaving sufficient room between for the yielding of the canvas in a person's descent. The addition of the gauze netting has always been found useful, as, although not affording an entire protection against the canvas burning, it in most cases avails, and prevents the possibility of any one falling through. The soaking of the canvas in alum and other solutions has never been omitted; but this, while preventing its flaming, cannot preclude the risk of accidents from the fire charring the canvas.

The height attainable by this escape varies from 60 to 80 feet, according to the supplemental ladders carried, which are made to fit into each other.

Amongst the more recent improvements has been the unshipment of the upper ladder, to which the short or first-floor ladder is fitted, the whole length being carried, with a rope and belt attached, where the large escape cannot be used. The total cost of this escape is about 100*l*.

To this escape, constructed by Mr. George Clarke, the Society's builder, was awarded the Exhibition Medal of 1862.

L'appareil de sauvetage de M. Wivell est construit sur le principe de celui adopté en 1841, mais grandement perfectionné à plusieurs reprises.

La principale échelle a de 30 à 35 pieds, et peut instantanément être appliquée contre les fenêtres du 2^e ou 3^e étage au moyen du levier de la voiture. L'échelle supérieure repliée sur l'échelle principale est mise aisément dans la position où elle est représentée par une corde attachée aux leviers de fer qui se trouvent à chaque côté de l'échelle principale, ou, comme on l'a récemment adopté, par un arrangement de poulies qui remplacent les leviers de fer. La petite échelle pour le premier étage, qui peut être placée sous la voiture, est souvent d'une grande utilité. Sous toute la longueur de l'échelle principale se trouve un morceau de toile à voile soutenu à l'extérieur par un filet en fil de cuivre, laissant un espace suffisant pour que la toile puisse se prêter à la descente d'une personne. L'addition d'un filet métallique a toujours été trouvée très-utile, car quoique ne protégeant pas entièrement la toile contre le feu, il prévient et évite, dans le plus grand nombre de cas, la possibilité d'une chute à travers. On n'a jamais omis d'imbiber la toile dans une solution chimique, pour en empêcher l'inflammation, quoique cela ne puisse prévenir les accidents par suite de la carbonisation de cette toile; cependant la substitution d'une gaze métallique a été reconnue très-utile, et est maintenant appliquée à presque tous les appareils.

La hauteur qu'on peut atteindre avec ces appareils varie de 60 à 80 pieds, suivant le nombre d'échelles supplémentaires, qui sont faites de manière à s'ajuster l'une dans l'autre.

Parmi les améliorations les plus récentes est la possibilité de détacher l'échelle supérieure, à laquelle la petite échelle pour les premiers étages est attachée, et que l'on peut transporter avec une corde et une ceinture dans des endroits où l'appareil entier ne peut servir.

Cet appareil de sauvetage construit par M. Clarke, constructeur de la Société, a obtenu la Médaille de l'Exposition de 1862.

RUSSELL, JOHN, & CO., 69 Upper Thames-street, London, E.C.

Established from the commencement of Gas Lighting.

Etablissement fondé depuis le commencement de l'éclairage du gaz.

Etabliert seit Einführung der Gasbeleuchtung.

MARQUE DE FABRIQUE.

FABRIKZEICHEN.

First Class Prize Medal, Paris, 1855; First Class Prize Medal, Dublin, 1865.

Manufacturers of patent welded iron tubes and fittings for gas, steam, and water, tubes for hydraulic purposes, high pressure tubes, with right and left hand screws, galvanized and enamelled tubes, gun metal steam cocks, &c., &c.

Inventors and first makers of lapwelded tubes for locomotive and marine boilers.

Warehouses: 69 Upper Thames-street, E.C.; 5 Charles-street, Soho-square, W.; Commercial-street, Spitalfields, N.E., London; and 35, 36, 37, & 39 Granby-row, Manchester.

Manufactories: The Old Tube Works, Church-hill, Wednesbury; and the Alma Tube Works, Walsall, Staffordshire.

Médaille de 1^{re} Classe à l'Exposition Universelle de Paris, 1855; Médaille de 1^{re} Classe à l'Exposition de Dublin, 1865.

Fabricants de tubes en fer étiré et appareils d'ajustage pour le gaz, l'eau et la vapeur, de tuyaux hydrauliques, de tuyaux à haute pression avec vis à droite et à gauche, de tuyaux galvanisés et émaillés, de robinets de vapeur en métal de canon, etc. etc.

MM. JOHN RUSSELL & C^{ie}. sont les inventeurs et premiers fabricants de tubes en fer forgé à recouvrement, sans soudure, pour

chaudières de locomotives et chaudières de marine.

Magasins de Dépôt: 69 Upper Thames-street, E.C.; 5 Charles-street, Soho-square, W.; Commercial-street, Spitalfields, N.E., à Londres; et 35, 36, 37, et 39 Granby-row, à Manchester.

Usines: The Old Tube Works, Church-hill, Wednesbury, et The Alma Tube Works, Walsall, Staffordshire.

Erster Preis in Pariser Ausstellung, 1855; erster Preis in Dubliner Ausstellung, 1865.

Fabricanten von patentirten geschweissten Röhren und Verbindungsstücken für Gas-, Dampf- und Wasserleitungen, Röhren für hydraulische Zwecke, Hochdruckröhren mit rechtem und linkem Gewinde, galvanisirten und emailirten Röhren, Dampfkrahnen von Kanonenmetall u. s. w. u. s. w.

Erfinder und erste Fabricanten von übereinander geschweissten Röhren für Locomotiven und Schiffsdampfkessel.

Waarenlager: 69 Upper Thames-street, E.C.; 5 Charles-street, Soho-square, W.; Commercial-street, Spitalfields, N.E., London; und 35, 36, 37 & 39 Granby-row, Manchester.

Fabriken: The Old Tube Works, Church-hill, Wednesbury; und The Alma Tube Works, Walsall, Staffordshire, England.

CLASS LIV.

POWIS, JAMES, & CO., *Victoria Works, Vine-street, York-road, Lambeth, London, s.*

Saw-Mill Engineers and Iron Founders.

Ingénieurs, Fondateurs et Constructeurs de Scieries.

Sägemühlen-Ingenieure und Eisengiesser.

Ingegneri per Seghe a Macchina e Fonditori di Ferro.

Were awarded, at International Exhibition, London, 1862, the only Prize Medal given for First-class Wood-working Machinery.

Patented for Great Britain, France, Belgium, &c., a combined endless band and up-and-down saw machine.

Patented in Great Britain, France, Belgium, &c., a moulding and planing machine, with all four cutters working outside, and the vertical spindles adjustable to any angle.

See also seven other new and improved machines exhibited with the above in Group VI. Class 54.

Prices and drawings supplied upon application to our works, London, for all kinds of machinery for working in wood.

Patent Combined Endless Band and Up and Down Saw.

Erhielten bei der internationalen Ausstellung im Jahre 1862 die einzige Medaille, welche für ausgezeichnete Holz zurichtende Maschinerie bewilligt wurde.

Sind patentirt für Grossbritannien, Frankreich, Belgien etc., für ihre Sägemaschine, mit endlosem Riemen und Bewegung auf und niederwärts.

Patentirt für Grossbritannien, Frankreich, Belgien etc., eine Verzierhobelmaschine, deren vier Hobeisen an der Aussenseite arbeiten und deren verticalen Spindeln auf irgend einen Winkel gestellt werden können.

Siehe ebenso sieben andere neue und verbesserte Maschinen, welche nebst den andern in Gruppe VI. Klasse 54, aus-

stellt sind.

Preislisten und Zeichnungen aller Sorten Maschinen zur Bearbeitung von Holz werden auf Verlangen zugesendet.

Ont remporté, à l'Exposition Internationale de Londres de 1862, l'unique Médaille décernée pour Machines de Première Classe à travailler le Bois.

Machine à faire les moulures et à raboter, avec les quatre coupleurs travaillant en dehors et les essieux verticaux s'ajustant à tout angle, brevetée pour la Grande-Bretagne, la France, la Belgique, etc.

Voir aussi sept autres machines nouvelles et perfectionnées qu'on expose avec celle mentionnée ci-dessus, Groupe VI. Classe 54.

Prix et dessins fournis sur demande à nos usines, à Londres, pour machines de toutes sortes à travailler le bois.

La sola Medaglia aggiudicata per Meccanismi per far Lavori in Legno di Prima Classe fu data a loro all'Esposizione Internazionale di Londra, 1862.

Macchina per far modanature e piallare, i suoi quattro tagliatori funzionando al di fuori e gli assi verticali che si aggiustano ad ogni angolo, patentata in Gran-Bretagna, Francia, Belgio, ecc.

Vedasi anche sette altre macchine di costruzione nuova e perfezionata che si espongono con quella sopradetta, Gruppo VI. Classe 54.

Prezzi e disegni forniti a richiesta alle nostre officine in Londra per ogni specie di meccanismi per lavori in legno.

ROBINSON, THOMAS, & SON, *Rochdale, near Manchester; London Office, 59 Cannon-street, E.C.*

Saw Mill Engineers and Wood-Working Machinists.

Ingenieurs.—Constructeurs de Scieries mécaniques et de Machines-Outils pour le Travail du bois.

Prize Medal, London, 1862.

The machinery exhibited by T. R. & SON is a moderate-sized working plant for a joiner or builder, combining all the latest improvements. In addition to their engineering works, which are the largest in Great Britain devoted specially to the manufacture of wood-working machinery, T. R. & SON have for the last fifteen years been proprietors of extensive sawing, planing, and moulding mills, in which they manufacture mouldings, doors, windows, and other articles in wood, by machinery. The experience thus acquired has enabled them to bring their wood-working machinery to a greater state of perfection and simplicity of construction than any other makers in the trade; while parties visiting their works can at all times see in operation the machinery they propose purchasing.

Les machines exposées par T. R. et FILS sont des modèles de moyenne grandeur généralement employés par les menuisiers et les constructeurs, et comportant les perfectionnements les plus récents. En dehors de leurs ateliers de construction, qui sont les plus considérables de l'Angleterre dans la spécialité de l'outillage mécanique du bois, MM. T. R. et FILS sont propriétaires depuis quinze ans d'une grande scierie et usine à bois, où ils fabriquent mécaniquement des moulures, des portes et fenêtres et d'autres ouvrages en bois, à qui les a mis à même de simplifier et de rendre vraiment pratique la construction de ces machines plus que toute autre maison dans la même branche. Toutes les personnes qui voudront bien honorer leurs ateliers d'une visite pourront voir en opération les machines qu'elles se proposent d'acheter.

Patent Moulding Machine—Machine à Faire les Moulures, brevetée, s.g.d.g.

T. R. & SON forward, post free, to intending purchasers, catalogues and price-lists in English, French, and German, in which will be found drawings and descriptions of the principal machines they make, consisting of timber and deal frames, circular saw benches, veneer sawing machines, endless band saws, sweep cutting saws, moulding, planing, and squaring machines, mortising, tenoning, and boring machines, wheel-spoke machines, grinding machines for plane and moulding irons, wood-turning lathes, steam-engines, boilers, shafting, gearing, &c.

T. R. & SON also furnish estimates for machines used in the manufactures of casks, barrels, wheels, rifle-stocks, &c.; and make machines for special purposes when required.

Complete sets of machinery designed and arranged for builders, contractors, timber merchants, sawing, planing, and moulding mills, ship-builders, waggon-builders, railway companies, government arsenals, dockyards, &c.

MM. T. R. et FILS envoient franco par la poste des catalogues et des prix-courants en anglais, français et allemand, dans lesquels se trouvent les dessins et les descriptions des machines principales qu'ils fabriquent, savoir: scieries pour bois en grume et à madriers, scieries circulaires, scieries placage, scieries à lame sans fin, scieries à chantourner, machines à raboter, équarrir et faire les moulures, machines à mortaiser, percer et faire les tenons, machines à faire les rais de roues, machines à affûter les fers à raboter et moulures, tours à bois, machines et chaudières à vapeur, transmissions de mouvement, etc.

MM. T. R. et FILS aussi fournissent des devis spéciaux pour les machines à faire les tonneaux, les roues des wagons, les crosses de fusils, etc., et d'autres machines spéciales sur commande.

Assortiment complet des machines arrangé et dessiné pour des ateliers de constructeurs, entrepreneurs, marchands de bois, scieurs et fabricants de moulures, constructeurs de wagons, de matériel de chemins de fer, arsenaux militaires et maritimes, etc.

THE WHITWORTH COMPANY (LIMITED), *Manchester.*

CLASS LV.

FERRABEE, JAMES, *Port Mills, Brimscombe, near Stroud, Gloucestershire, England.*

Carded Wool, Woollen Yarn, Woollen Cloth in various stages, Broad and Narrow Finished Cloths; Mechanical Felts.

Improved Machinery for Carding Wool, fitted with FERRABEE's Patent Continuous Bat-feeding Machinery.

FERRABEE's Patent Feeding Machinery takes the wool from the 'doffer' of the opening carding engine in the form of a 'fleece' or thin 'sheet sliver' the full width of the doffer, and disposes it in diagonal folds crossing each other alternately on an endless apron running at right angles to the axis of the doffer, forming thereon a continuous narrow sliver from 9 to 12in. in width, which sliver is carried forwards mechanically, and laid without any stretching in diagonal layers, one overlapping the other, forming a continuous uniform 'bat' of any desired width or thickness on the feed apron of another carding engine.

This system of feeding is adapted for either long-stapled wools or short material. The material undergoes in its progress through the machines a thorough mixing, is always submitted to the action of the cards in the best way for securing a perfect distribution of its fibres, and for producing uniform 'slubbing' on threads from the condenser.

One of the improved 'Feeds' is exhibited in the Machinery Department of the Exhibition, Class 55, attached to a carding engine and condenser, made by JOHN TATHAM, of Moss Lane Works, Rochdale, England, of whom particulars may be obtained, or from his agent in attendance on the machines, in the Exhibition, or from the Patentee of the 'Feeds,' addressed as above. The carding engines are well constructed and possess increased facilities for adjustment; the cylinders, &c., are made of iron, and the axles of steel, and well balanced. They also revolve with great accuracy.

Mr. TATHAM is an extensive maker of all kinds of cotton and woollen machinery, and was awarded the Prize Medal at the Dublin Exhibition, 1865, for carding and spinning machinery. His Patent Self-acting Mule was highly spoken of, as being adapted for all kinds of wool, cotton, &c.

A very simple Slubbing or Roving Frame, for cotton, patented by Mr. TATHAM, is here exhibited, which dispenses with the complicated change motions and cumbrous cone drums, which have been hitherto used and distributed over a considerable length of the machine.

Another very ingenious machine, patented by Mr. TATHAM is exhibited, for making laps of cotton, wool, worsted, &c., and is entirely self-acting and simple. It takes in the empty bobbins and delivers the full ones, and goes on for any quantity of bobbins which may be put in the feeding hopper.

diagonalement en plis qui se croisent l'un l'autre alternativement sur un tablier sans fin courant à angles droits de l'axe du peigneux, formant sur le dit tablier un ruban étroit et continu de 22c.86 à 30c.48 de largeur, lequel est reporté en avant mécaniquement et étendu sans étirage en couches diagonales, se recouvrant l'une l'autre, produisant ainsi une nappe uniforme et continue de toute largeur ou épaisseur désirée sur le tablier d'alimentation d'une autre cardeuse.

Ce système d'alimentation est adapté aux laines soit à longue soit à courte soie. Par son emploi la matière première subit dans sa marche à travers les machines un mélange complet, et est toujours soumise à l'action des cardes de la manière la plus propre à assurer une parfaite distribution de ses fibres, et à produire un boudinage uniforme sur les fils provenant du condenseur.

Un de ces Alimenteurs perfectionnés est exposé dans le Département des Instruments de Travail, Classe 55, attaché à une machine à cardes et condenseur, fabriqués par JOHN TATHAM, des Usines de Moss-lane, Rochdale, Angleterre, de qui peuvent se procurer les détails, ainsi que de son agent qui surveille les machines à l'Exposition, ou des Inventeurs brevetés des Alimenteurs, à l'adresse ci-dessus. Ces machines à carder sont d'une excellente construction, avec de plus grandes facilités d'ajustement; les cylindres, etc., sont en fer et les essieux en acier, et parfaitement équilibrés. Leur révolutions, en outre, s'accomplissent avec une grande précision.

M. TATHAM est annuellement le constructeur d'une quantité considérable de machines à travailler le coton et la laine, et a obtenu la Médaille à l'Exposition de Dublin en 1865, pour ses machines à carder et à filer. Sa Mule-Jenny automate brevetée y reçut les plus grands éloges pour son adaptation à toutes espèces de laine, coton, etc.

On trouvera aussi dans cette exposition un Métier à Boudiner, pour coton—pour lequel un brevet a été pris par M. TATHAM—d'une construction très-simple; et débarrassé des changements de mouvements compliqués, et des incommodes tambours coniques, jusqu'alors en usage et distribués sur une longueur considérable de la machine.

Une autre machine fort ingénieuse—pour laquelle M. TATHAM a également pris un brevet d'invention—fait aussi partie de cette exposition; c'est une machine à faire les rubans de coton, laine, laine filée, etc., parfaitement automate, et très-simple. Elle prend les bobines vides et rend les pleines, et ainsi de suite quelle que soit la quantité de bobines qui puissent être mises dans la trémie d'alimentation.

Le Système Alimentaire Breveté de FERRABEE prend la laine du peigneux cylindrique de l'ouvreuse sous la forme d'une tranche mince de toute la largeur du peigneux, et la dispose

HODGKIN, JOHN ELIOT, *West Derby, Liverpool.*

Brasier's treble-patent Breaking and Scutching Machinery.

The greatest obstacles to the full development of the cultivation and use of our native fibre, *flax*, have hitherto been the cumbrous nature of the machinery employed for its reduction to a state fit for spinning, the necessity for the employment of skilled labour, and, above all, the *waste* which ensues upon the treatment of the straw by any of the means at present in use. The key to these difficulties is to be found in the fact that the useful fibre adheres with great persistence to the '*shive*,' no matter how perfectly the '*retting*' may have been effected.

The machinery here exhibited overcomes, for the first time, the impediments which have existed throughout the whole history of flax cultivation. By the operation of the *patent Breaker*, *three-fourths* of the weight of the woody portion are entirely removed, and the product, possessing *half* the weight of the original straw, has obtained a value per cwt. of from *four to five times* that of the article which entered the machine. Whilst so large a portion of the '*shive*' has been removed, the *whole* has been separated and loosened, and in the second operation the enormous value of the first is manifested. In the ordinary process of *scutching*, where straw

is acted upon which has been only *crushed* and *flattened* in the first or breaking process, great severity is necessarily exercised upon the fibre, without which it would be impossible to bring out the flax at all free from the closely adherent '*shive*.' In the *patent Scutchers*, the lightest possible blow is given to the fibre, which a child can hold in its place, and a very great saving (averaging about 25 per cent. of finished flax) is hereby effected. A very small proportion of *tow* is made, and by the peculiar arrangement of the dressing apparatus, that small quantity is delivered in a marketable state at the end of the machine.

The advantages of the patent machines may be thus summed up—

- No skilled labour required.*
- Great compactness.*
- Avoidance of all injury to fibre.*
- Saving of 25 per cent. of long fibre.*
- Cleansing of the whole of the tow.*

The machines can be adapted for *hemp*.

For further particulars, and for price of machines, and royalty on English, American, and Continental patents, apply to the exhibitor.

HOWARD & BULLOUGH, *Globe Works, Accrington, near Manchester.*

Self-stopping Beaming Frame.

The peculiarity of our Beaming Frame consists in its stopping self-actingly when an end breaks. This property renders it impossible for the most careless warper to produce bad work, whereas, on the old system, the utmost diligence failed to detect, in the course of a day, many broken ends in time to stop the machine before they had been run on too far for recovery. In England it has grown so rapidly in public favour that in less than four years from its introduction it has completely superseded every other machine.

Self-changing Shuttle Loom.

Our Self-changing Shuttle Loom is supplied with twelve shuttles. When the weft breaks in the working shuttle, it is ejected, and another shuttle is caused to take its place, and so on till all the shuttles are used up, when the loom stops. If, however, the weaver returns before the twelve shuttles are exhausted, he can replace the whole with the loom working at full speed. As a weaver is only absent from a loom in very exceptional cases such a length of time, there should be no stoppage for weft from morning till night. This gives an increase of work proportionate to the time thus saved, and a weaver may mind four or five looms with as much ease as three ordinary looms. The cost of a loom on this principle will not be more than that of an ordinary loom.

Machine for Making Expanding Combs, &c.

This being perfectly self-acting, the dents are far more regular than combs, &c. made by hand, and the price of them is reduced 40 per cent.

Ourdissoir à casse-fil.

Le caractère distinctif de cette machine consiste en ce qu'elle s'arrête d'elle-même aussitôt qu'un fil se rompt. Cette propriété rend impossible à l'ourdisseur le plus négligent de produire du mauvais ouvrage, tandis que dans l'ancien système la plus grande vigilance ne parvenait pas à découvrir dans le cours de la journée nombreux de fils rompus, assez à temps pour arrêter la machine avant qu'ils ne fussent trop loin pour pouvoir être rattachés. Cette machine a été accueillie en Angleterre avec une faveur publique si marquée, qu'elle a remplacée toute autre machine dans l'espace de moins de quatre ans depuis son introduction.

Métier à Tisser.

Notre métier à navettes se changeant d'elles-mêmes est muni de douze navettes. Lorsque la trame se rompt dans la navette qui fonctionne, celle-ci est rejetée au dehors, une autre prend sa place, et ainsi de suite jusqu'à ce que toutes aient été employées; alors le métier s'arrête. Si, cependant, le tisserand revient avant que les douze navettes ne soient épuisées, il peut les remplacer toutes sans que le métier ralentisse la rapidité de sa marche. Mais comme il est

rare qu'un tisserand s'éloigne d'un métier durant un aussi long espace de temps, excepté dans des circonstances tout-à-fait exceptionnelles, il s'ensuit qu'avec notre métier il n'y a nul arrêt dans la trame depuis le matin jusqu'à la nuit. Ceci donne donc une augmentation de travail proportionnelle au temps gagné, et en outre un tisserand peut faire marcher quatre ou cinq métiers de ce système avec autant de facilité que trois métiers ordinaires. Enfin un métier construit d'après ce principe ne coûtera plus qu'un métier ordinaire.

Machine à Fabriquer des Peignes à Expansion, etc.

Cette machine étant parfaitement automatique, les creux sont beaucoup plus réguliers que dans les peignes, etc., faits à la main, et leur prix est réduit de 40 pour cent.

Selbst anhaltende Aufbaummaschine.

Die Eigenthümlichkeit unserer Aufbaummaschine besteht darin, dass sie von selbst anhält, wenn ein Faden reisst. Diese Eigenschaft macht es selbst für den unachtsamsten Weber unmöglich, schlechte Arbeit zu produciren, während, an dem alten System, die grösste Aufmerksamkeit, in dem Laufe eines Tages, viele gerissene Faden nicht zeitig genug entdecken konnte, um die Maschine, ehe jene zu weit gelaufen waren, für ihre Wiedererlangung anzuhalten. Sie hat so schnell in England öffentlichen Gefallen gefunden, dass in weniger als vier Jahren von ihrer Einführung sie jede andere Maschine vollständig unnöthig gemacht hat.

Selbst wechselnder Webestuhl.

Unser Webestuhl, welcher seine Schiffchen selbst ändert, ist mit zwölf Schiffchen versehen. Wenn der Einschuss in dem arbeitenden Schiffchen reisst, so wird dasselbe herausgeworfen, und ein anderes Schiffchen nimmt seinen Platz ein, und so fort, bis alle Schiffchen verbraucht sind, wenn der Webestuhl anhält. Wenn jedoch der Weber zurückkehrt, ehe die zwölf Schiffchen ausgebraucht sind, so kann er sie Alle wieder in ihren Platz bringen, während der Webestuhl in voller Arbeit bleibt. Da aber ein Weber in sehr seltenen Fällen von dem Webestuhl so lange fort ist, so sollte keine Pause für Einschuss von Morgens bis Abends sein. Dies ergibt eine grössere Quantität von Arbeit in Proportion mit der so ersparten Zeit, und ein Weber kann vier oder fünf Webestühle mit derselben Leichtigkeit überwachern wie drei gewöhnliche Webestühle. Der Preis eines Webestuhls nach diesem Princip wird nicht mehr als der eines gewöhnlichen Webestuhles sein.

Maschine zum Verfertigen von sich ausdehnenden Webekämmen etc.

Da diese Maschine sich selbst regulirt, so sind folglich die Zähne viel regelmässiger als diejenigen von Kämmen etc., welche mit der Hand gemacht sind, und der Preis derselben ist 40 Procent reducirt.

PLATT BROTHERS & CO., *Hartford Iron Works, Oldham.*

Preparing, Spinning, and Weaving Machinery for Cotton and Woollen.
Machines pour Préparer, Filer et Tisser le Coton et la Laine.

AN IMPROVED SINGLE ACTION MACARTHY
COTTON GIN,

40 inches wide, fitted with suitable arrangements for altering with facility, the overlap of the moving knife, to suit various lengths of staple, from long to short cotton.

Is specially recommended for countries where varieties of long and short stapled cotton are grown.

Speed of crank-shaft 600 revolutions per minute, production 20 to 50 lbs. of clean cotton per hour according to the class of cotton ginned.

UNE MACHINE PERFECTIONNÉE, À SIMPLE ACTION, POUR EGRENER LE COTON, SYSTÈME MACARTHY,

de 40 pouces (1 m. 016) de largeur, munie de dispositions convenables pour modifier facilement le recouvrement du couteau mouvant de façon à s'appliquer aux diverses grandeurs de longues et courtes fibres du coton.

Spécialement recommandée pour les contrées où se récoltent des variétés de coton à longues et courtes soies.

Vitesse de la bielle, 600 révolutions par minute, production 20 à 50 livres de coton nettoyé (9 kilogr. 08 à 22 kilogr. 70) par heure, selon la sorte du coton égrené.

Patent Self-feeding Double-action Macarthy Cotton Gin for Power.
Machine à Egrenier le Coton à double effet, s'alimentant d'elle-même, brevetée, de Macarthy, mue par force de vapeur ou autre.

A PATENT DOUBLE ACTION MACARTHY
GIN,

40 inches wide, fitted with Platt and Richardson's patent balanced crank and two working knives.

Advantages.—Smaller speed of crank-shaft, greater number of vibrations of knives, greater steadiness of motion, and increased production.

UNE MACHINE BREVETÉE À DOUBLE ACTION
POUR EGRENER, SYSTÈME MACARTHY.

de 40 pouces (1 m. 016) de largeur, munie de la bielle à contre-poids brevetée de Platt et Richardson et de deux couteaux travailleurs.

Avantages.—Marche moins rapide de la bielle, un plus grand nombre de vibrations des couteaux, plus grande régularité de mouvement, et accroissement de production.

PLATT BROTHERS & CO., *Hartford Iron Works, Oldham.*

Egrenir-, Spinn- und Webe-Maschinen für Baumwolle und Wolle.
Macchine da Preparare, Filare e Tessere il Cotone e la Lana.

EINE VERBESSERTE EINFACH WIRKENDE
 MACARTHY-EGRENIRMASCHINE,

40 Zoll breit, mit einer zweckmässigen Einrichtung, das Ueberhängen des beweglichen Messers mit Leichtigkeit den verschiedenen Längen der Baumwollenfasern anzupassen.

Ist besonders den Ländern zu empfehlen, wo Baumwolle mit langem und kurzem Stapel gezogen werden.

Die Schnelligkeit der Kurbelachse ist 600 Umdrehungen in der Minute, die Production 20 bis 50 Pfund gereinigte Baumwolle in der Stunde, je nach der Art der zu reinigenden Baumwolle.

MACCHINA DA SGRANELLAR COTONE, DI
 MACARTHY, AD AZIONE SINGOLA PERFEZIONATA,

larga 40 pollici, fornita di congegno adattato per variare con facilità la sovrapposizione della lama mobile, per adattarla alle varie lunghezze della fibra del cotone, dalla lunga alla corta.

È specialmente raccomandata per quei paesi in cui si producono varietà di cotone a fibra lunga e corta.

Velocità dell' asse a lieva 600 rivoluzioni per minuto, prodotto 20 a 50 lbe. di cotone sgranellato per ora, secondo la classe del cotone da sgranellare.

Patentirte selbst fütternde doppelt wirkende Macarthy-Egrenirmaschine für Dampfkraft.
Macchina di Macarthy, con alimentatore automatico, a doppia azione (patentata).

EINE PATENTIRTE DOPPELT WIRKENDE
 MACARTHY-EGRENIRMASCHINE,

40 Zoll breit, ausgerüstet mit Platt und Richardson's patentirter balancirter Kurbel und zwei arbeitenden Messern.

Vorzüge.—Geringere Schnelligkeit der Kurbelachse, grössere Anzahl der Vibrationen der Messer, grössere Stetigkeit der Bewegung und vermehrte Production.

MACCHINA DI MACARTHY A DOPPIA AZIONE
 (PATENTATA),

larga 40 pollici, fornita dell' asse a lieva bilanciata, e due lame in attività di Platt e Richardson (patentata).

Vantaggi.—Minor velocità di asse a lieva, maggior numero di vibrazioni delle lame, maggior regolarità di movimento e accrescimento del prodotto.

Speed of crank shaft 450 revolutions per minute, vibrations of knives 900, production of clean cotton 40 @ 75 lbs.

Recommended for all cottons with short and medium staples.

Both single and double action gins are also fitted with patent self-feeders, by use of which one person may attend to four or six gins.

'A PATENT DOUBLE ACTION 'HAND POWER' MACARTHY GIN,

12 inches wide, fitted with Platt and Richardson's patent balanced crank and two working knives.

Speed of Macarthy roller, 50 revolutions per minute (driven by two men); production 10 lbs. of clean cotton per hour.

Each gin is fitted with a 'Patent Fibre Macarthy Roller,' which is much more durable than those covered with leather, or other materials previously used. Its surface is uniform throughout, and it does not become smooth by working, so that the production of the machine is maintained as long as the roller lasts.

The fibre is put on the roller shaft in rings, which are easily replaced when worn out, or in case of accidental damage to the roller.

A SINGLE SCUTCHER AND LAP MACHINE,

with down draft, to make laps for carding engines 40 inches on wire. Fitted with Mohlers' patent pedestals to the beater, with feeder for spreading and for laps.

Note.—We are obliged by our limited space to work this machine for both breaking and finishing the laps, and to dispense with the opening machine.

But opening machines are made by us, of various kinds, and with and without lap machines.

Scutchers are also made with both single and double beaters, and with up and down draft, and with and without patent feeders, to suit the quality and quantity of cotton to be worked.

No. 1. A SINGLE IRON CARDING ENGINE WITH CYLINDER,

40 inches on wire, by 45½ inches diameter; taker-in 9 inches diameter; doffer 22 inches, fancy and fancy stripper, six rollers and six clearers, feeder with roller in dish, improved fly comb to strip the doffer, draw box delivery and coiler for 36 × 9 inch cans.

Vitesse de la bielle, 450 révolutions par minute; vibrations des couteaux, 900; production de coton nettoyé 40 à 75 livres (18 kilogr. 16 à 34 kilogr. 05).

Recommandée pour tous cotons à soie courte ou de longueur moyenne.

Ces deux machines, aussi bien celle à simple que celle à double action, sont munies d'alimenteurs automatés, brevetés, grâce à l'usage desquels une seule personne peut surveiller de quatre à six machines.

UNE MACHINE BREVETÉE À DOUBLE ACTION POUR ÉGRENER À LA MAIN, SYSTÈME MACARTHY.

de 12 pouces (0 m. 30) de largeur, munie de la bielle à contre-poids, brevetée, de Platt et Richardson, et de deux couteaux de travail.

Vitesse du rouleau Macarthy, 50 révolutions par minute (mue par deux hommes); production, 10 livres (4 kilogr. 54) de coton nettoyé par heure.

Chaque machine est munie d'un rouleau à fibre, breveté, de Macarthy, beaucoup plus durable que ceux recouverts de cuir, ou autres substances précédemment en usage. Sa surface est complètement uniforme, et il ne se polit point en fonctionnant, de sorte que la production de la machine se maintient aussi longtemps que dure le rouleau.

La fibre se place sur l'arbre du rouleau en cercles qui se remplacent facilement dès qu'ils sont usés, ou en cas de dommage accidentel au rouleau.

SIMPLE BATTEUR ET MACHINE À RÉUNIR,

avec ventilation en bas, pour faire des rouleaux pour cardes de 40 pouces (1 m. 016) de garniture, la batte munie des piédestaux brevetés de Mohler, avec alimenteur pour étalage et pour nappes.

N.B.—Nous sommes obligés par notre espace restreint de nous servir de cette machine tout à la fois pour briser et finir les nappes, et de nous dispenser d'un ouvreur.

Mais, néanmoins, nous fabriquons aussi des machines à ouvrir, de toutes sortes, avec ou sans machine à réunir.

Nous fabriquons aussi des batteurs à une ou deux battes, avec la ventilation en haut ou en bas, ainsi qu'avec ou sans alimenteurs brevetés, selon la qualité et la quantité de coton à travailler.

No. 1. SIMPLE CARDE EN FER AVEC TAMBOUR.

de 40 pouces (1 m. 016) de garniture, 45½ pouces (1 m. 155) de diamètre; briseur de 9 pouces (0 m. 23) de diamètre; petit tambour de 22 pouces (0 m. 56), cylindre déboureur et déboureur pour ditto, six hérissons et six débouleurs, alimentation au moyen d'un cylindre dans un bain, peigne perfectionné pour peigner le petit tambour, étirage et couvercle pour pots de 36 × 9 pouces (0 m. 92 × 0 m. 23).

Schnelligkeit der Kurbelachse 450 Umdrehungen in der Minute; Vibrationen der Messer 900; Production von reiner Baumwolle 40 bis 75 Pfund.

Empfohlen für alle Baumwolle von kurzer oder mittlerer Länge.

Sowohl die einfach, wie die doppelt wirkenden Egrenirmaschinen sind mit einer selbst wirkenden patentirten Speisevorrichtung versehen, wodurch eine Person 4 bis 6 Egrenirmaschinen vorstehen kann.

EINE PATENTIRTE DOPPELT WIRKENDE MACARTHY HAND-EGRENIRMASCHINE,

12 Zoll breit, versehen mit Platt und Richardson's patentirter balancirter Kurbel und zwei arbeitenden Messern.

Die Schnelligkeit der Macarthy-Walze ist 50 Umdrehungen in der Minute (von zwei Mann getrieben); Production 10 Pfund reine Baumwolle in der Stunde.

Jede Maschine ist mit einer patentirten Macarthy-Faserwalze versehen, welche viel dauerhafter, als die mit Leder bedeckten oder andern früher gebrauchten Materialien ist. Ihre Oberfläche ist durchaus gleichförmig und wird durch die Arbeit nicht glatt, so dass die Production der Maschine unverändert bleibt, so lange als die Walze dauert.

Die Fasern werden auf den Walzenschaft in Ringen gelegt, die leicht wieder substituirt werden können, wenn sie abgearbeitet sind, oder im Falle einer zufälligen Beschädigung der Walze.

EINE EINFACHE SCHLAG- UND WICKELMASCHINE,

mit herabgehendem Zuge, um Wickel für Carden von 40 Zoll Breite zu machen. Ausgerüstet mit Mohler's patentirtem Lager für den Schläger und Speisevorrichtung (Lattentuch) zum Ausbreiten und für Wickel.

Bemerkung.—Wir sind genöthigt, wegen Mangel an Raum, diese Maschine sowohl zum Trennen wie zum Beendigen der Wickel zu gebrauchen und die Lockerungsmaschine (Opener oder Wolf) nicht anzuwenden. Die Opener werden von uns in verschiedener Art gemacht, und das mit oder ohne Wickelmaschine.

Schlagmaschinen werden von uns gleichfalls mit einfachen und doppelten Schlägern und mit Auf- oder Abzug, mit und ohne patentirtem Speiseapparat gemacht, um sie der Qualität und Quantität der zu verarbeitenden Baumwolle anzupassen.

NO. 1. EINE EINFACHE EISERNE CARDE MIT CYLINDER.

40 Zoll am Draht und $45\frac{1}{2}$ Zoll Durchmesser; mit Beiseur 9 Zoll Durch., Abnehmer 22 Zoll, Volant und Putzwalze, 6 Arbeiter und 6 Wender, Speisevorrichtung mit Walze und Platte, verbesserter Kamm um den Abnehmer zu entleeren, Streckwerk und Drehtopfvorrichtung für Töpfe 36" bei 9".

Velocità dell' asse a lieva 450 rivoluzioni per minuto; vibrazioni dei coltelli, 900; produzione di cotone sgranellato, 40 a 75 lbs.

Raccomandata per tutti i cottoni a fibra corta o mezzana.

Ambo le macchine tanto ad azione singola che doppia sono anche fornite di alimentatore automatico patentato, pel' uso del quale una sola persona può attendere a quattro o sei macchine.

MACCHINA DI MACARTHY 'A MANO' A DOPPIA AZIONE (patentata),

larga 12 pollici, fornita dell' asse a lieva bilanciata di Platt e Richardson, e due lame in attività.

Velocità del cilindro Macarthy 50 rivoluzioni per minuto (mosso da due uomini); prodotto 10 lbs. di cotone sgranellato per ora.

Ciascuna macchina è fornita di un 'cilindro Macarthy di 'fibra patentata,' che è molto più durevole di quelli coperti di cuojo o altri materiali anteriormente adoperati. La sua superficie è totalmente uniforme e non diviene liscia coll' uso, cosicché il prodotto della macchina si mantiene fintanto che dura il cilindro.

La fibra vien posta sul cilindro in cerchi che sono facilmente ricollocati quando consunti o in caso di guasto accidentale al cilindro.

BATTITOJO SEMPLICE CON MACCHINA DA FAR CILINDRI,

con ventilatore al di sotto della macchina, per far cilindri per cardì di 40 pollici di guarnitura. Fornita coi pedestalli patentati di Mohler al battente, con alimentatore per spandere e per cilindri.

Nota.—Siamo costretti dalla ristrettezza dello spazio ad adoprare questa macchina come primo e secondo battitojo e senza far uso d' una macchina per aprire. Però siamo costruttori di varie specie di macchine per aprire il cotone, con e senza macchinario per far cilindri.

I battitoji si fanno a uno o a due battenti con volante al di sopra o al di sotto della macchina e con o senza alimentatori patentati da adattarsi alla qualità e quantità del cotone da lavorarsi.

NO. 1. MACCHINA DA CARDARE IN FERRO A UN TAMBURO.

40 pollici di guarnitura, $45\frac{1}{2}$ pollici di diametro, tamburo d' entrata 9 pollici e tamburo d'avanti 22 pollici di diametro, con volante e con 6 travagliatori e 6 pulitori; alimentatore con cilindro e sotto-cilindro concavo, pettine a volante perfezionato per denudare il tamburo d'avanti; con laminatojo ed avvolgitore per tubi di 36 x 9 pollici.

Recommended as a single carder for 40s. counts, medio yarns, and as a breaker card to prepare slivers for the machine to make laps for finishers for 60s. counts.

NO. 2. A SINGLE IRON CARDING ENGINE WITH CYLINDER,

40 inches on wire, 45½ inches diameter, taker-in 9 inches diameter, doffer 22 inches diameter, feeder with roller and dish, one roller and clearer, and 44 self-stripping flats, improved fly comb to strip the doffer, drawbox delivery, and coiler for 36 x 9 inch cans.

This card is recommended for single carding up to 40s. counts, as breaker or finisher up to 80s. counts, and as a breaker card to prepare slivers for the machine to make laps for the combing machine, for 60s. counts and upwards.

A GRINDING MACHINE,

for grinding two rollers at once, fitted with Horsfall's patent traversing disc grinding roller. Also one pair of Horsfall's patent grinding rollers, to grind cylinders, doffers, and self-stripping flats.

A PATENT COTTON COMBING MACHINE,

to comb laps 16 inches wide, fitted with double feed comb; two series of nipping jaws, with intermittent rotary motion; two revolving combs, expanding circular brush, doffing cylinder covered with cards, stripping rollers, and two coilers and can motions.

By this machine successive tufts of cotton are taken from the silver or lap by which it is fed; both ends of each tuft are combed and deposited upon a doffing cylinder in such a manner as to overlap one another and be reunited in a continuous sliver, and afterwards be deposited in a coiling can on one side of the machine, whilst the waste or noil is delivered and coiled in a can on the other side.

These machines are simple in construction, and are generally made with two deliveries each, which occupy the same space in width, and about one half in depth, as a breaker carding engine of 40 inches on wire.

One of such machines is fully capable of combing as much cotton as the 40 inch. card can prepare for it.

Recommended to comb cotton for all counts of yarn.

Cette carte est recommandée pour simple cardage jusqu'au No. 40, pour fils de qualité moyenne, et comme carte en gros, pour préparer le coton pour la carte en fin, jusqu'au No. 60.

NO. 2. SIMPLE CARDE EN FER AVEC TAMBOUR.

de 40 pouces (1 m. 016) de garniture 45½ pouces (1 m. 155) de diamètre, briseur de 9 pouces (0 m. 23) de diamètre, petit tambour de 22 pouces (0 m. 56) de diamètre, alimentation au moyen d'un cylindre dans un bain, un hérissou et déboureur, et 44 chapeaux se débouillant mécaniquement, peigne perfectionné pour peigner le petit tambour, étrépage et couvercle pour des pots de 36 x 9 pouces (0 m. 92 x 0 m. 23).

Cette carte est recommandée pour simple cardage jusqu'au No. 40, comme carte en gros et carte en fin jusqu'au No. 80, et comme carte en gros pour préparer les rubans pour la machine à réunir qui fait les nappes pour la peigneuse, pour les No. 60, et au-delà.

MACHINE À AIGUISER,

pour aiguiser deux cylindres à la fois, munie du disc aiguiser transversal, breveté, de Horsfall. Aussi une paire de cylindres brevetés de Horsfall, pour aiguiser les tambours, les petits tambours et les chapeaux se débouillant mécaniquement.

UNE PEIGNEUSE BREVETÉE POUR LE COTON,

pour peigner des nappes de 16 pouces (0 m. 41) de largeur, munie d'un double peigne alimentaire; deux séries de pinces coupantes avec mouvement rotatoire intermittent; deux peignes rotatoires, brosse circulaire à expansion, petit tambour couvert de cardes, rouleaux débouilleurs, et deux mouvements de couvercles et de pots.

Au moyen de cette machine des touffes successives de coton sont prises de la mèche ou de la nappe qui l'alimente; les deux extrémités de chaque touffe sont peignées et déposées sur un petit tambour de façon à se couvrir l'une l'autre pour être réunies en un ruban continu, et ensuite être déposées dans un pot tournant d'un côté de la machine tandis que le déchet est livré et enroulé dans un autre pot de l'autre côté.

Ces machines sont d'une construction simple, et généralement faites avec deux livraisons chaque, qui occupent le même espace en largeur, et à peu près moitié en profondeur, qu'une carte en gros de 40 pouces (1 m. 016) de garniture.

Une de ces machines est capable de peigner autant de coton que peut lui en préparer la carte de 40 pouces (1 m. 016).

Recommandée comme peignant le coton pour tous numéros de fils.

Empfohlen für einmaliges Cardiren von No. 40, Mittelgarn, und als Vorcarde deren Bänder auf der Doublirmaschine vereinigt Wickel bilden für die Feincarden für No. 60 Garn.

NO. 2. EINE EINFACHE EISERNE CARDE MIT CYLINDER,

40 Zoll am Draht, 45½ Zoll Durchmesser, mit Briseur 9 Zoll Durch., Abnehmer 22 Zoll, Speisevorrichtung mit Walze und Platte, 1 Arbeiter und 1 Wender, und 44 sich selbst abstreifende Deckel, verbesserter Kamm um den Abnehmer zu entleeren, Streckwerk und Drehtopfvorrichtung für Töpfe 36" bei 9."

Diese Carde wird empfohlen für einmaliges Cardiren bis circa No. 40 Garn, als Vor- oder Feincarde für Garne bis No. 80, und als Vorcarde deren Bänder auf der Doublirmaschine vereinigt Wickel bilden für die Kämmmaschine für No. 60 Garne und höher.

EINE SCHLEIFMASCHINE,

um 2 Arbeiter oder Wender zu gleicher Zeit zu schleifen, versehen mit Horsfall's patentirter transversirender Scheibe; gleichfalls ein Paar von Horsfall's patentirten Schleifwalzen zum Schleifen des Cylinders, des Abnehmers und der sich selbst abstreifenden Deckel.

EINE PATENTIRTE BAUMWOLLEN-KÄMM-MASCHINE,

um Wickel von 16 Zoll Breite zu kämmen, mit doppeltem Speisekamm versehen; 2 Systeme von die Baumwolle festhaltenden Laden mit unterbrochener rotirender Bewegung; 2 rotirende Kämmе; ausdehnbare circular Bürste; Abnehmer mit Cardengarnitur überzogen; Putzwalzen und 2 Drehtöpfe.

Durch diese Maschine werden fortwährend Baumwollenbüschel von den Bändern oder Wickeln mit denen dieselbe gespiessen wird abgenommen; beide Seiten eines jeden Büschels werden gekämmt und auf den Abnehmer in einer solchen Weise abgelegt, dass ein Büschel an den andern sich anreihet und welche sodurch zu einem neuen continuirlichen Bande vereinigt werden, welches schliesslich in einen Drehtopf auf der einen Seite der Maschine deponirt wird, während das Kurze oder der Abgang ebenfalls in ein Band vereinigt, auf der andern Seite der Maschine in einen Drehtopf überliefert wird.

Diese Maschinen sind einfach in ihrer Construction und werden gewöhnlich eine jede mit 2 Ablieferungen gemacht, welche denselben Raum in der Breite und circa die halbe Tiefe einer Grobcarde von 40 Zoll Breite einnehmen.

Eine solche Maschine ist vollständig fähig, so viel Baumwolle zu kämmen, als die 40zöllige Carde für sie vorbereiten kann.

Empfohlen, um Baumwolle für alle Nummern von Garn zu kämmen.

Raccomandata per cardare fino al numero 40 filo medio, e come primo cardo fino al No. 60 dove si carda due volte.

NO. 2. MACCHINA DA CARDARE IN FERRO A UN TAMBURIO,

con 40 pollici di guarnitura, 45½ pollici di diametro, tamburo d'entrata 9 pollici, tamburo d'avanti 22 pollici di diametro; alimentatore con cilindro e sotto-cilindro concavo; un travagliatore ed un nettatore e con 44 coperti pulitori automatici; pettine perfezionato a volante per denudare il tamburo d'avanti; con laminatojo ed avvolgitajo per tubi di 36 × 9 pollici.

Questo cardo è raccomandato per cardare fino al No. 40, dove si usa un sol cardo e come primo o secondo cardo fino al No. 80, dove se ne usano due, oppure per preparare il cotone per la macchina a pettinare fino al No. 60 e al di sopra.

MACCHINA PER ARRUOTARE,

per arruotare due cilindri alla volta, fornita del disco traversante patentato di Horsfall. Un cilindro arruotatore ed anche un pajo di cilindri arruotatori patentati di Horsfall per arruotare tamburi, cilindri e coperti automatici.

MACCHINA PER PETTINAR COTONE (PATENTATA),

per pettinare faldelle larghe 16 pollici, fornita di pettine a doppio alimentatore, due serie di morse con moto rotatorio intermittente, due pettini rotatori, spazzola circolare espansiva, cilindro scaricatore coperto di cardi, cilindri denudatori, e due movimenti pegli avvolgitori e i tubi.

Con questa macchina si prendono in successione fiocchi di cotone dal capo o dalla faldella da cui è alimentata; ambedue gli estremi di ciascun fiocco sono pettinati e depositati sul cilindro scaricatore in modo da soprapporsi l'un l'altro, ed esser riuniti in un capo continuo ed esser poi depositati in un tubo avvolgitore da un lato della macchina, mentre il rifiuto o scorcio è consegnato e avvolto in un tubo dall' altro lato.

Queste macchine sono semplici nella costruzione, e sono fatte generalmente con due trasmissioni ciascuna, che occupano lo stesso spazio in larghezza a circa metà in lunghezza di un cardo di 40 pollici sulla guarnitura.

Una di tali macchine è ben atta a pettinare tanto cotone quanto una cardatrice da 40 pollici può preparargliene.

Raccomandata per pettinare cotone per tutti i numeri di filati.

A DRAWING FRAME.

One head of 2 deliveries, four rows of rollers $1\frac{1}{2}$ inch, $1\frac{1}{8}$ inch, $1\frac{1}{2}$ inch, $1\frac{1}{8}$ inch diameters. Leigh's patent tops to front line, common tops to middle and back lines, two coilers and can motions for cans 36 inches \times 9 inches, twelve stop motions for back of frame, and two ditto for front. Improved hinged top flats with endless traversing cloth. Roller traverse motion, arrangement for unweighting rollers.

These frames are made of any number of deliveries to suit the work to be performed, and they have generally three passages in the set, which may be arranged separately so as to be placed one behind the other, or the three passages may be made in one frame as best suits the space available for placing them, the most usual size being three passages of five dls. The weight of cotton drawn varies from 400 lbs. to 800 lbs. per delivery, according to the thickness of hank required.

ONE SLUBBING AND INTERMEDIATE FRAME,

of twenty-four spindles, three rows of rollers $1\frac{1}{4}$ inch, 1 inch, $1\frac{1}{4}$ inch diameter, fitted with Leigh's patent tops to front line, and common tops to middle and back lines. Hinged cap bars and top flats, with endless traversing clearer-cloth, long spindle collars, and flyers, with single centrifugal pressers for $10 \times 5\frac{1}{2}$ inch bobbins. Brass roller, stop motions, and guides for slivers at back of frame to be used when worked as a slubbing frame; and with creel for doubling two ends into one, when used as an intermediate frame, traverse motion which is driven by the lifter reversing motion, web separating plates, indicator with metrical divisions, spindle and bobbin wheels boxed up with iron plates, stop motion for arresting the frame when the bobbins are filled. Break for fly-wheel, arrangements for throwing the bobbin and lifter shafts out of gear, so as to facilitate the doffing of bobbins, and the winding down of the lifter by hand, also for winding the cone drum-strap back after doffing, and for lifting the cone drum from the front of the frame.

These frames, when used as slubbers, are made of various lengths, and numbers of spindles; the number of spindles generally adopted is 64, and the length of the machine 28 feet, including space for driving pulleys.

UN BANC D'ÉTIAGE.

Une tête de deux systèmes, quatre rangs de cylindres de $1\frac{1}{2}$, $1\frac{1}{8}$, $1\frac{1}{2}$, $1\frac{1}{8}$ pouce (0 m. 038, 0 m. 028, 0 m. 038, 0 m. 028) de diamètre. Cylindres de pression, système Leigh, pour le premier rang, cylindres de pression ordinaires pour les rangs du milieu et de derrière, deux mouvements de couvercles et de pots pour des pots de 36×9 pouces (0 m. 92 \times 0 m. 23), douze mouvements d'arrêt pour le derrière du banc, et deux ditto pour le devant. Chapeaux à charnières et à toile sans fin. Mouvement transversal des cylindres, arrangement pour soulever les poids de pression des cylindres.

Ces bancs sont fabriqués de tout nombre de systèmes afin de faciliter le travail à accomplir, et ils ont généralement trois passages dans la série, qui peuvent se disposer séparément de façon à se placer l'un derrière l'autre; ou bien les trois passages peuvent se faire en un seul banc selon qu'il convient le mieux en raison de l'espace disponible pour les placer. La dimension la plus ordinaire est de trois passages de cinq systèmes chaque, le poids de coton étiré variant de 400 à 800 livres (182 kilogs. à 364 kilogs.) par système, selon l'épaisseur de la mèche.

UN BANC À BROCHES EN GROS ET INTER-MÉDIAIRE,

de 24 broches, trois rangs de cylindres de $1\frac{1}{4}$, 1, $1\frac{1}{4}$ pouce de diamètre (0 m. 031, 0 m. 025, 0 m. 031) de diamètre, cylindres de pression système Leigh pour le premier rang, cylindres de pression ordinaires pour les rangs du milieu et de derrière. Chapeaux à charnières et à toile sans fin, longs collets pour les broches, ailettes avec simples presseurs centrifuges pour bobines de $10 \times 5\frac{1}{2}$ pouces (0 m. 25 \times 0 m. 14). Rouleau en cuivre, mouvements d'arrêt, et guides pour rubans au derrière du banc, à employer alors que fonctionnant comme banc à broches en gros et avec ratelier pour doubler deux bouts en un lorsqu'il est employé comme banc intermédiaire; mouvement transversal, qui est conduit par l'élévateur mouvement inverse, plaques de séparation, indicateur à divisions métriques, roues de broches et de bobines encaissées avec plaques de fer, mouvement d'arrêt pour arrêter le banc lorsque les bobines sont remplies. Frein pour volant, mécanisme pour arrêter le jeu des bobines et arbres d'élévation, de façon à faciliter la levée des bobines et la descente de l'élévateur à la main, ainsi que pour détendre la courroie du tambour conique après la levée et pour soulever le cone lui-même du devant du banc.

Ces bancs sont fabriqués de longueurs diverses avec des nombres divers de broches; quand ils sont employés comme bancs à broches en gros, celui généralement adopté étant de 64 broches et la longueur de la machine 28 pieds (8 m. 53), y compris l'espace nécessaire pour les poulies motrices.

EIN STRECKWERK.

Ein Kopf mit 2 Ablieferungen, 4 Reihen Cylinder, $1\frac{1}{2}$ Zoll, $1\frac{1}{2}$ Zoll, $1\frac{1}{2}$ Zoll, und $1\frac{1}{2}$ Zoll Durchmesser. Leigh's patentirte Presscylinder für die erste Reihe, gewöhnliche Cylinder für die mittleren und hinterste Reihe, 2 Drehtopfvorrichtungen für Töpfe 36" bei 9"; 12 Selbstauslösungen für die Rückseite und 12 für die Vorderseite der Strecke. Verbesserte Deckel mit Charnier und einem endlosen rotirenden Tuche, traversirende Bewegung der Bänder, Vorkehrung zur Entlastung der Presscylinder.

Diese Strecken werden mit irgend welcher Anzahl von Ablieferungen gemacht, um sie der auszuführenden Arbeit anzupassen; sie haben gewöhnlich 3 Durchgänge in einer Abtheilung, welche entweder hinter einander aufgestellt werden können, oder die 3 Durchgänge werden in eine Linie placirt, je nach dem vorhandenen Platze, in dem sie so zweckmässig als möglich aufgestellt werden sollen.

Die gewöhnlichste Grösse besteht aus 3 Durchgängen von je 5 Ablieferungen; die Production stellt sich auf 400 bis 800 lbs. per Ablieferung je nach der Nummer des verlangten Bandes.

EINE GROBSPULBANK UND MITTELSPULBANK,

von 24 Spindeln, 3 Reihen Cylinder, $1\frac{1}{4}$ Zoll, 1 Zoll und $1\frac{1}{4}$ Zoll Durchmesser, versehen mit Leigh's patentirten Presscylindern für die erste Reihe, und gewöhnliche Presscylinder für die mittlere und hintere Reihe. Capstangen und Deckel mit Charnier versehen, und endlos rotirendem Tuche; Spindeln mit langer Führung, und Flügel mit einfachem Centrifugal-Arm für Spulen von 10" bei $5\frac{1}{2}$ ". Messingene Führungswalze, Selbstauslösung und Führungsklinken für die Bänder auf der Rückseite der Bank wenn sie gebraucht wird als Grobspulbank; einen Aufsteckrahmen um 2 Luntten in eine zu doubliren, wenn die Bank als eine Mittelspulbank gebraucht wird; Traversführung getrieben von dem Spulenwagen, Schaltvorrichtung, Platten zum Trennen der Lunte, Indicator mit metrischer Theilung, Spindel- und Spulenräder mit eisernen Platten eingeschalt, Ausrückungsapparat um die Bank abzustellen wenn die Spulen voll sind. Bremse für das Schwungrad, Einrichtung um den Spulen und Hubschaft ausser Thätigkeit zu setzen, um das Abnehmen der Spulen und das Zurückbringen des Spulenwagens von Hand zu erleichtern; ebenso um den Konusriemen zurückzubringen nach dem Abnehmen, und um den Konus von der Vorderseite der Bank zu heben.

Diese Spulbänke; wenn sie gebraucht werden als Grobspulbänke, werden von verschiedener Länge und Anzahl Spindeln gemacht; die gewöhnlichste Anzahl Spindeln ist 64 und

LAMINATOJO.

Una testata di due trasmissioni, quattro filari di cilindri di $1\frac{1}{2}$ pollice, $1\frac{1}{2}$ pollice, $1\frac{1}{2}$ pollice, $1\frac{1}{2}$ pollice di diametri. Cilindri di pressione patentati di Leigh nella linea di fronte, e detti comuni nelle linee di dietro, due movimenti di avvolgitori e di tubi da 36 x 9 pollici, dodici movimenti d'arresto per l'indietro dell'intelaiatura e due detti sul davanti. Coperti nettatori a cardini perfezionati con panno traversante perpetuo. Movimento trasverso di cilindro; disposizione per scaricare i cilindri.

Questi telai vengono fatti con qualunque numero di trasmissioni per adattarsi al lavoro da farsi, e hanno generalmente tre passaggi nello assortimento che possono essere disposti separatamente, in modo da poter esser situati l'uno dietro l'altro, o si possono fare i tre passaggi in una intelaiatura come meglio convenga allo spazio utile per situarli.

La grandezza più usuale essendo di tre passaggi di 5 trasmissioni ciascuno, variando il peso del cotone tirato da 400 lbe. a 800 lbe. per trasmissione, secondo la grossezza del filo desiderato.

LAMINATOJO A SPUOLE,

di 24 fusi, tre filari di cilindri, $1\frac{1}{4}$, 1, $1\frac{1}{4}$ pollice di diametro. Fornito di cilindri di pressione di Leigh nella linea di fronte e di cilindri comuni nelle linee di dietro. Coperti di ferro con panno nettatore traversante perpetuo. Colari lunghi per i fusi; ali con singola pressione centrifuga per cannelle di $10 \times 5\frac{1}{2}$ pollici. Cilindro d'ottone, movimenti d'arresto, e guide per i capi all'indietro del telaio, da usarsi quando la macchina è attivata come banco No. 1, o all'ingrosso; e con spalliera per raddoppiare due capi in uno quando usata come banco intermedio, o No. 2. Movimento trasverso dei cilindri, mosso dall'elevatore; movimento di riversione; piastre separanti i capi; indicatore con divisione metrica; le ruote per i fusi e le cannelle incassate con piastre di ferro; movimento d'arresto per fermare la macchina quando le cannelle sono piene. Scarpa pel volano; apparato per spostare le assi dell'elevatore e delle cannelle per indifferenziare lo scaricamento delle cannelle piene e lo svolgimento a mano dell'elevatore, come anche per portar indietro la cigna del tamburo conico dopo lo scaricamento e per sollevare il tamburo conico dall'innanzi del banco.

Queste macchine, quando usati come banco No. 1, o all'ingrosso, sono fatte di varie lunghezze e numeri di fusi; il numero di fusi generalmente adottato è 64 fusi, e la lun-

The thickness of sliver produced, varies from 0.25 to 2.5 hanks per lb.

When used as intermediate frames, they are made of various lengths, numbers of spindles, and for various sizes of bobbins. The average length of frame is about 28 to 30 feet.

The number of spindles generally adopted, is 80 to 120, according to the lift of the bobbin, and the fineness of hank roving to be made, which varies from $1\frac{1}{2}$ to 4 hanks per lb., the lift of the bobbins being 8, 9, or 10 inches.

A ROVING FRAME OF 84 SPINDLES,

three rows of rollers, $1\frac{1}{4}$ inch, 1 inch, $1\frac{1}{4}$ inch diameter, fitted with Leigh's patent tops to front line, and common tops to middle and back lines. Hinged cap bars and top flats with stationary cloths, spindle collars $5\frac{1}{2}$ inches long, and flyers with double centrifugal pressers for $7 \times 3\frac{3}{8}$ inch bobbins, iron creels fitted with pot steps for doubling two ends into one. Traverse motion which is driven by the lifter reversing motion. Indicator with divisions in English hanks. Spindle and bobbin wheels cased with iron front and back, and wood tops. Iron bobbin boxes at back of frame, friction reversing motion, Platt and Hartley's patent stop motion for arresting the frame when the bobbins are filled, break for fly wheel, arrangements for throwing the bobbin and lifter shafts out of gear, so as to facilitate the doffing of bobbins, and the winding down of the lifter by hand, also an arrangement for winding the cone drum strap back after doffing, and for lifting the cone drum from the front of the frame.

Roving frames are also made of various lengths, numbers of spindles, sizes and description of bobbins, to suit the quality of work to be done and the available space for fixing them.

The following may be taken as the sizes generally adopted under each class, viz.:

128 spindles, $7 \times 3\frac{3}{8}$ inch bobbins, double centrifugal pressers, to stand in 28 ft. $1\frac{1}{2}$ inches, to make rovings from 3 to 7 hanks per lb.

140 spindles, 6×3 inch bobbins, double and single centrifugal pressers, to stand in 28 ft. 5 inches, and to make rovings from 6 to 12 hanks per lb.

164 spindles, $5 \times 2\frac{1}{2}$ inch bobbins, soft bobbins, to stand in 30 ft. $1\frac{1}{2}$ inches, and to make rovings from 10 to 20 hanks per lb.

L'épaisseur du ruban produit varie de 0.25 à 2.5 hanks par livre.

Quand on s'en sert comme de bancs intermédiaires, ils sont également faits de longueurs et nombres de broches divers, et pour différentes dimensions de bobines. Les longueurs moyennes du banc sont alors d'environ de 28 à 30 pieds (8 m. 53 à 9 m. 14).

Le nombre de broches généralement adopté est de 80 à 120, selon la hauteur de la bobine et la finesse de la mèche à faire, qui varie de $1\frac{1}{2}$ à 4 hanks à la livre, la hauteur de la bobine étant de 8, 9 ou 10 pouces (0 m. 204, 0 m. 229, 0 m. 254).

UN BANC À BROCHES EN FIN DE 84 BROCHES,

trois rangs de cylindres $1\frac{1}{4}$, 1, $1\frac{1}{4}$ pouce (0 m. 031, 0 m. 025, 0 m. 031) de diamètre, cylindres de pression système Leigh pour le premier rang, cylindres de pression ordinaires pour les rangs du milieu et de derrière, chapeaux à charnières avec toile fixe, collets de broches de $5\frac{1}{2}$ pouces (0 m. 14) de longueur et ailettes avec doubles presseurs centrifuges pour bobines de $7 \times 3\frac{3}{8}$ pouces (0 m. 178 \times 0 m. 085), rateleurs en fer arrangés pour doubler deux bouts en un. Mouvement transversal conduit par le mouvement de l'élevateur en sens inverse. Indicateur avec divisions en hanks anglais. Roues de broches et de bobines encaissées en plaques de fer, devant et derrière, et le dessus en bois. Boîtes en fonte pour bobines au derrière du banc. Mouvement en sens inverse à frottement, breveté de Platt et Hartley, mouvement d'arrêt pour arrêter le banc quand les bobines sont pleines, frein pour volant, mécanisme pour arrêter le jeu des bobines et arbres d'élévation de façon à faciliter la levée des bobines, et le déroulement de l'élevateur à la main, ainsi que pour détendre la courroie du cône après la levée, et pour soulever le cône lui-même du devant du banc.

Les bancs à broches en fin sont aussi fabriqués de diverses longueurs et de divers nombres de broches, et avec bobines de différentes dimensions et sortes, afin de s'adapter à la qualité de travail à exécuter et à l'espace dont on peut disposer pour les établir.

Les dimensions suivantes peuvent être prises comme celles généralement adoptées dans chaque classe, savoir:

128 broches, bobines de $7 \times 3\frac{3}{8}$ pouces (0 m. 178 \times 0 m. 089), doubles presseurs centrifuges, de 28 pieds $1\frac{1}{2}$ pouce de longueur, pour faire des mèches de 3 à 7 hanks par livre.

140 broches, bobines de 6×3 pouces (0 m. 152 \times 0 m. 075), doubles et simples presseurs centrifuges, de 28 pieds 5 pouces de longueur, pour faire des mèches de 6 à 12 hanks par livre.

164 broches, bobines de $5 \times 2\frac{1}{2}$ pouces (0 m. 127 \times 0 m. 063). Bobines molles, de 30 pieds $1\frac{1}{2}$ pouce de longueur, pour faire des mèches de 10 à 20 hanks par livre.

die Länge einer solchen Maschine ist 28 Fuss, die Triebrollen inbegriffen.

Die Stärke der hierauf erzeugten Lanten variirt von 0·25 bis 2·5 Hanks per Pfund.

Wenn dieselben als Mittelspulbänke gebraucht werden so werden sie ebenfalls von verschiedener Länge, Spindelzahl, und für verschiedene Spulengrößen gemacht. Die gewöhnlichste Länge der Bank ist circa 28 bis 30 Fuss.

Die meist gebräuchliche Spindelzahl ist 80 bis 120, je nach der Höhe der Spule und der Feinheit des zu erzeugenden Vorgespinnstes, welches zwischen $1\frac{1}{2}$ bis 4 Hanks per lb. variirt, die Höhe der Spule ist 8, 9 oder 10 Zoll.

EINE FEINSPULBANK VON 84 SPINDELN,

3 Reichen Cylinder, $1\frac{1}{4}$ Zoll, 1 Zoll und $1\frac{1}{4}$ Zoll Durchmesser, ausgerüstet mit Leigh's patentirten Presscylindern und gewöhnlichen Cylindern für die mittlere und hintere Reihe. Capstangen und Deckel mit Charnier versehen und stationärem Tuch, Spindle-Führung $5\frac{1}{2}$ Zoll lang, und Flügel mit doppeltem Centrifugal-Arm für 7" bei $3\frac{3}{4}$ " Spulen, eiserner Aufsteckrahmen mit irdenen Spulenpfannen versehen, um 2 Lanten in eine zu doubliren. Traversbewegung ist getrieben durch den Heber der Schaltvorrichtung. Indicator in englische Hanks eingetheilt. Spindel- und Spulenräder, auf 2 Seiten mit eisernen Platten eingeschalt und mit Holz oberhalb. Eiserner Spulenkasten auf der Rückseite der Bank, Frictions-Umsteuerung Platt und Hartley's Patent, Auskehrvorrichtung um die Bank abzustellen wenn die Spulen gefüllt sind, Bremse für das Schwungrad, Einrichtung um den Spulen und Hubschaft ausser Thätigkeit zu setzen um das Abnehmen der Spulen und das Zurückbringen des Spulenwagens von Hand zu erleichtern; ebenso um den Konusriemen nach dem Abnehmen zurückzubringen und um den Konus von der Vorderseite der Bank zu heben.

Feinspulbänke werden ebenfalls von verschiedener Länge, Anzahl der Spindeln, Größe und Art der Spulen gemacht, um sie der Qualität des beabsichtigten Productes und dem verwendbaren Raume anzupassen.

Man kann das Folgende als die gewöhnlich adoptirte Größe einer jeden Klasse annehmen, nämlich:

128 Spindeln, 7" bei $3\frac{3}{4}$ " Spulen, doppelte, Centrifugal-Arme, Länge der Bank 28' $1\frac{1}{2}$ ", um Vorgespinnst von 3 bis 7 Hank per Pfund zu produziren.

140 Spindeln, 6" bei 3" Spulen, doppelte und einfache Centrifugal-Arme, Länge der Bank 28' 5" und um Vorgespinnst von 6 bis 12 Hank per Pfund zu produziren.

164 Spindeln, 5" bei $2\frac{1}{2}$ " Spulen; weiche Spulen, Länge der Bank 30' $1\frac{1}{2}$ ", und um Vorgespinnst von 10 bis 20 Hank per Pfund zu produciren.

ghezza della macchina 28 piedi, incluso lo spazio pella puleggia comunicante noto.

La grossezza dei capi prodotti varia dal No. 0·25 al No. 2·5, numero inglese.

Quando usati come telai intermedi sono fatti di varie lunghezze, numeri di fusi e per varie grossezze di cannelle. La lunghezza media di telaio è 28 a 30 piedi.

Il numero di fusi generalmente adottato è da 80 a 120, secondo la portata della cannella e la finezza del filo da farsi, che varia da $1\frac{1}{2}$ a 4 matasse per libbra, la portata della cannella essendo da 8, 9, 10 pollici.

BANCO A SPUOLE FINO, DI 84 FUSI,

tre ordini di cilindri di $1\frac{1}{4}$, 1, $1\frac{1}{4}$ pollice di diametro; forniti con cilindri di pressione patentati di Leigh nella linea di fronte e comuni nelle linee di dietro. Coperti nettatori in ferro con panni stazionari; collari per fusi lunghi $5\frac{1}{2}$ pollici; ali con doppia pressione centrifuga per cannelle da 7 × $3\frac{3}{4}$ pollici. Spalliera in ferro con cuscinetti in porcellana per raddoppiare due capi in uno. Movimento trasverso per cilindri, mosso dall' elevatore. Indicatore con divisioni in matasse inglesi. Ruote di fusi e cannelle incassate in ferro innanzi e indietro, e di sopra in legno. Casette da cannelle in ferro sull' indietro del telaio, movimento invertente a frizione, patente di Platt e Hartley, movimento d' arresto per fermare il telaio quando le cannelle sono piene, scarpa pel volano, apparato per spostare l' asse delle cannelle e della corda, acciò facilitare lo scaricamento delle cannelle e l' avvolgimento a mano della corda, ed anche un apparato per svolgere la cigna del tamburo conico dopo lo scaricamento, e per sollevare il tamburo conico dall' innanzi del telaio.

Queste macchine si fanno anche di varie lunghezze, numeri di fusi, grossezze e genere di cannelle, adattabili alla qualità del lavoro da farsi ed allo spazio disponibile ove fissarli.

Le seguenti si possono prendere come le grandezze generalmente adottate per ciascuna classe, cioè:

128 fusi, cannelle 7 × $3\frac{3}{4}$ pollici, doppi pressori centrifugi da stare in 28 piedi e $1\frac{1}{2}$ pollici per far spuoie da 3 a 7 matasse per libbra.

140 fusi, cannelle 6 × 3 pollici, doppi e singoli pressori centrifugi da stare in 28 piedi e 5 pollici e far spuoie da 6 a 12 matasse per libbra.

164 fusi, cannelle 5 × $2\frac{1}{2}$. Spuoie senza pressione da stare in 30 piedi e $1\frac{1}{2}$ pollici e da far spuoie da 10 a 20 matasse per libbra.

A SELF-ACTING MULE FOR SPINNING COTTON,

of 252 spindles, $1\frac{3}{8}$ distance, $16\frac{1}{2}$ inch spindles, three rows of rollers, plate bolsters and foot-steps in one half, and pipe bolsters and foot-steps in the other half, iron creels for single roving, steel roving guides, back shafts and driving apparatus, conical friction pulleys for driving the cam shaft and taking-in shafts, double twist band arrangement, faller locking, and long coping motion with double plates, from which the coping rail may be taken out and replaced at any stage of the cop's progress, without disturbance of its working position. Patent governor or cop regulator, for adjusting the winding-on motion to the formation of the cop, which is perfectly automatic in its action. Improved construction of square and carriage coupling, by which the square and carriage are more firmly and accurately connected.

Drawing-out motion with an arrangement for stopping in case of obstruction to free traverse of carriage, thereby preventing break-age of bands, &c.

These mules are made of various numbers and distances of spindles up to 1,200 each, and to suit any position of main driving shaft in the building to contain them.

A SELF-ACTING MULE FOR SPINNING WOOL.

150 spindles, 2-inch distance, 18-inch spindles, one line of plain bottom rollers $1\frac{1}{2}$ inch, and tops $2\frac{1}{4}$ inches diameter, fitted with surface drums to spin from condensor bobbins of various lengths, also with a movable creel to spin when desired from slubbing bobbins, variable slow and fast speeds, spindle stopping motion, twisting-in motion, stop motion for carriage. Patent governor for regulating the winding-on motion, conical friction pulleys for cam shaft, and taking-in shafts. Faller locking and long coping motion, with rail on double plates, and slubbing delivery motion connected to cam shaft.

These mules are sometimes made with 600 spindles, but the most desirable length is 350 to 400 spindles.

A POWER LOOM TO WEAVE PLAIN AND FANCY WOOLLEN CLOTHS.

Of any pattern up to 28 shafts jacquard. 106 inches Reed space, fitted with balance taking-up motion. Reversing motion for unweaving without throwing shuttle out of box. Easing

UN MÉTIER À FILER AUTOMATE, POUR FILER LE COTON,

de 252 broches, de $1\frac{3}{8}$ pouce (0 m. 035) de distance, broches de $16\frac{1}{2}$ pouces (0 m. 419), trois rangs de cylindres collets en plaques et crapaudines pour la moitié et collets séparés, et crapaudines pour l'autre moitié, rateliers en fer pour simple mèche de banc en fin, guides-fils d'acier, arbres à maintenir le chariot et contre-arbres, poulies coniques de friction pour mouvoir l'arbre de temps et l'arbre des poires, arrangement des cordes de torsion double, mouvement pour l'arrêt des baguettes, long mouvement pour faire les cannettes avec doubles plaques d'où le coping rail peut être enlevé et remplacé pendant la formation de la cannette sans dérangement de sa position travaillante. Régulateur breveté, pour l'ajustement du mouvement de renvidage à la formation de la cannette, lequel est parfaitement automatique. Construction améliorée du carré et de la partie du chariot qui s'y adapte, qui permet d'obtenir plus de solidité et d'exactitude.

Mouvement de sortie, avec un mécanisme d'arrêt en cas d'obstruction, pour dégager la traverse du chariot, empêchant ainsi la rupture des cordes, etc.

Ces métiers sont faits de divers nombres de broches à diverses distances, jusqu'à 1,200 chaque, et de façon à s'adapter à toute position du principal arbre moteur dans le bâtiment.

UN MÉTIER À FILER AUTOMATE, POUR FILER LA LAINE,

de 150 broches, de 2 pouces (0 m. 05) de distance, broches de 18 pouces (0 m. 456), un rang de cylindres unis pour le bas de $1\frac{1}{2}$ pouce (0 m. 038) de diamètre, et les cylindres de pression de $2\frac{1}{4}$ pouces (0 m. 057) de diamètre avec cylindres de surface pour filer avec des bobines de condenseur de longueurs différentes, avec un ratelier mobile pour filer quand on le désire avec des cannettes, mouvements vite et lent variables, mouvement d'arrêt pour les broches, mouvement de torsion, mouvements d'arrêt pour le chariot. Régulateur breveté pour régler le renvidage, poulies coniques de friction, pour mouvoir l'arbre à cames et les arbres pour la rentrée du chariot. Jeu des baguettes et mouvement pour régler la forme des cannettes avec coping rail sur deux plaques et motion en connexion avec l'arbre à cames pour la sortie des mèches.

Ces métiers sont quelquefois construits avec 600 broches, mais la longueur la plus désirable est de 350 à 400 broches.

UN MÉTIER À TISSER MÉCANIQUEMENT, POUR TISSER DES ÉTOFFES UNIES ET FAÇONNÉES EN LAINE.

De tout modèle jusqu'à 28 jacquards, de 106 pouces de peigne, muni d'un mouvement à enrouler l'étoffe à contre-poids. Mouvement inverse pour dérouler l'étoffe sans enlever la

EINE SELBSTTHÄTIGE BAUMWOLLEN- SPINNMASCHINE,

von 252 Spindeln, $1\frac{3}{8}$ " Spindeldistanz, Spindel-länge $16\frac{1}{2}$ ", 3 Reihen Cylinder, Halslager-Platten und Pannan auf der einen Hälfte und Röhrenlager und Pannan auf der andern Hälfte, eiserner Aufsteckrahmen für einfache Vorgesponnt, stählerne Vorgesponnt-Leiter, hintere Wellen und Treibapparat, conische Frictions-Rollen um den Camschaft und Einzugschaft in Bewegung zu setzen, Einrichtung für ein doppeltes Zwirnseil, Aufwindfalle und lange Aufwindbewegung mit doppelten Formplatten von welchen die Leitschiene herausgenommen und wieder eingelegt werden kann bei irgend welcher Bildungsstufe des Kötzers, ohne die Arbeit zu unterbrechen. Patentirter Kötzerregulator der die Aufwindung zur Bildung des Kötzers regulirt, welche somit gänzlich automatisch in ihrer Bewegung wird. Verbesserte Construction des Wagenmittelstückes und der Wagenverbindung, durch welche das Wagenmittelstück und der Wagen fester und genauer verbunden werden.

Die Auszugbewegung mit einer Vorrichtung um den Wagen anzuhalten im Falle eines Hindernisses in der ausfahrenden Bewegung, wodurch das Brechen der Bänder verhindert wird etc.

Diese Spinnmaschinen werden für verschiedene Anzahl und Entfernung der Spindeln bis zu 1,200 eine jede gemacht, und auch für jede Lage des Haupttriebschafes in dem Gebäude, wo sie aufgestellt werden sollen.

EINE SELBSTTHÄTIGE WOLLENSPINNMASCHINE.

150 Spindeln, 2" Spindeldistanz, Spindel-länge 18", eine Reihe von glatten Cylindern $1\frac{1}{2}$ Zoll und gleichen Presscylindern $2\frac{1}{4}$ Zoll Durchmesser, ausgestattet mit Trommeln um von Condenserbobbinnen von verschiedener Länge zu spinnen, ebenso mit einem beweglichen Aufsteckrahmen um, wenn gewünscht, von Slubbingbobbinnen zu spinnen, veränderliche langsame und schnelle Geschwindigkeit, Vorrichtung zum Anhalten der Spindeln, Vorrichtung zum Anhalten des Wagens. Patentirter Regulator um die Aufwindbewegung zu reguliren, conische Frictions-Rollen für den Cam- und Einzugschaft. Aufwindfalle und lange Aufwindbewegung, mit Leitschiene auf doppelten Formplatten und Slubbingbewegung, verbunden mit dem Camschaft.

Diese Spinnmaschinen werden bisweilen mit 600 Spindeln angefertigt; die wünschenswertheste Länge jedoch ist 350 bis 400 Spindeln.

EIN KRAFTSTUHL, UM GLATTES UND GEMUSTER- TES WOLLENTUCH ZU WEBEN,

für jedes Muster bis zum 28schäftigen Jacquard, 106 Zoll Breite im Blatte, versehen mit balancirter Aufwickelbewegung. Umsteuerung zum Auslösen eingeschossener Faden, ohne die Schutze aus der Lade zu nehmen; Regulirung um die Spannung des Garnes zu mindern,

FILANDA AUTOMATICA PER FILAR COTONE,

di 252 fusi, $1\frac{3}{8}$ " distanza, fusi $16\frac{1}{2}$ pollici, tre ordini di cilindri; cuscinetti per fusi, in piastre per una metà e tubulari per l'altra metà. Spalliera in ferro per una cannella; asse di dietro e contr'albero comunicante moto, puleggie coniche a frizione per dar moto al 'camshaft,' e al ritornacarro, doppia fune di torzione, movimento dell'abbassatore del filo e dello agomitamento, con doppie piastre dalle quali la riga può esser tolta e rimessa a qualunque stadio del progresso del gomito senza disturbarne la posizione operante. Regolatore patentato o regolatore del gomito per aggiustare il movimento di avvolgimento alla formazione del gomito che nella sua azione è perfettamente automatico. Costruzione perfezionata degli accoppiamenti delle squadre e delle carriole per cui la squadra e la carriola sono connesse più solidamente e più accuratamente.

Movimento per arrestare il cammino del carro in caso di ostruzione, e quindi impedire la rottura delle corde, ecc.

Queste filande sono fatte di vari numeri e distanze di fusi fino a 1,200, e adattabili a qualunque posizione dell'asse principale comunicante moto nell'edificio che deve contenerle.

FILANDA AUTOMATICA PER FILAR LANA.

150 fusi, 2 pollici distanza, fusi di 18 pollici, una linea di cilindri lisci di $1\frac{1}{2}$ pollice e cilindri di pressione di $2\frac{1}{4}$ pollici di diametro; fornita di tamburi per filare dalle cannelle del cardo condensatore di varie lunghezze, ed anche con spalliera mobile per filare quando si voglia da gomiti o cannelle di un banco e spuoie. Velocità variabile, lenta o accelerata; movimento per arrestare i fusi, per ritorcere, per arrestare il carro. Regolatore patentato per governare il movimento d'avvolgimento, puleggie coniche a frizione per dar moto al 'camshaft' e al ritornacarro. Apparato per abbassare il filo e per formare il gomito con riga lunga e su doppie piastre; il movimento dei cilindri regolato dal 'camshaft.'

Queste filande si fanno qualche volta con 600 fusi, ma la lunghezza preferibile è di 350 a 400 fusi.

TELAIO MECCANICO PER TESSERE PANNO DI LANA SEMPLICE E FIGURATO,

Jacquard, di qualunque specie fino a 28 assi, 106 pollici spazio di pettine, forniti di movimento elevatore bilanciato. Movimento invertente per disfare il tessuto senza togliere la spola. Movimento di alleviamento per slentare il filo quando si apre l'ordito. Scarpa a

motion to relieve the yarn when the shed opens. Self-regulating break for weighting yarn beam, double capped self-acting temples. Brass pickers, and breast beam covered with brass.

A wrap drum.

A wrap reel and scales.

Cotton scales.

Card nailing-on tackle.

Box of rollers, spindles, flyers, &c.

Samples of cotton and woollen prepared and spun by machinery made by PLATT BROS. & Co.

A ring and traveller throstle, 48 spindles, distance $2\frac{3}{4}$ inches, lift 4 inches.

Owing to the limited space at our disposal, we are obliged to forego the exhibition of carding engines and other machines for the preparation and spinning of woollen and worsted goods, as made by us. For information respecting these, and for prices, apply to

Messrs. PLATT BROTHERS & Co., Class 55, Paris Exhibition, and Hartford Works, Oldham.

Messrs. De Jersey & Co., Manchester.

Messrs. E. Nathan & Sington, Manchester.

Mr. L. Knoop, Moscow and St. Petersburg.

Messrs. E. Nathan & Sington, Avenue de l'Impératrice, Rouen.

Mr. W. W. Derham, Leipsic.

Mr. F. E. Schoch, Vienna and Zurich.

Mr. James Sykes, Barcelona.

Messrs. Robinson Newton and Co., Bombay.

navette de la boîte. Mouvement pour soulager les fils quand le pas s'ouvre. Frein automate pour peser l'ensouple. Double temples mécaniques, battants de cuivre, et cylindre de devant couvert de cuivre.

Dévidoir.

Dévidoir et balance.

Balances pour peser le coton.

Garniture d'outils pour monter les garnitures des cardes.

Caisse contenant des cylindres, des broches et des ailettes.

Échantillons de coton et de laine préparés et filés sur des machines sortant des ateliers de PLATT FRÈRES ET CIE.

Un métier à filer continu, avec anneau et voyageur, de 48 broches, de $2\frac{3}{4}$ pouces (0 m. 07) de distance et de 4 pouces (0 m. 101) de course.

Par rapport à l'espace limité que nous avons à notre disposition, nous sommes obligés d'abandonner l'idée d'exposer les cardes et autres machines (pour préparer et filer la laine cardée et la laine peignée) qui sont construites par nous. Pour renseignements et prix de ces machines s'adresser à

Messieurs PLATT BROTHERS & Co., Classe 55, Exposition à Paris, ou Hartford Works, Oldham.

Messieurs De Jersey et Cie., Manchester.

Messieurs E. Nathan et Sington, Manchester.

Monsieur L. Knoop, Moscou et St.-Petersbourg.

Messieurs E. Nathan et Sington, Avenue de l'Impératrice, Rouen.

Monsieur W. W. Derham, Leipsic.

Monsieur F. E. Schoch, Vienna et Zurich.

Monsieur James Sykes, Barcelona.

Messieurs Robinson Newton et Cie. Bombay.

wenn die Kette sich öffnet; selbstthätige Kettenbaumbremse; doppelt becappte selbstwirkende Spannvorrichtung. Messingene Vögel und Brustbaum mit Messing belegt.

Ein Probirhaspel.

Ein Probirhaspel und Wage.

Eine Baumwollenwage.

Werkzeuge zum Aufnageln der Cardengar-

nitur.

Ein Glaskasten mit Cylindern, Spindeln und Flügeln.

Muster von Baumwolle und Wolle preparirt und gesponnen auf Maschinen verfertigt von GEBRÜDER PLATT & Co.

Eine Drosselspinnmaschine, 48 Spindeln; Spindeldistanz $2\frac{3}{4}$ Zoll, Hub 4 Zoll.

Wegen dem beschränkten Platze der zu unserer Verfügung stund, sind wir genöthiget gewesen die Anstellung von Carden und andern Maschinen wie sie von uns angefertigt werden zum Prepariren und Spinnen von Woll und Kammwollzeugen zu unterlassen. Um Erkundigungen betreffend derselben und für Preise wende man sich an:

CLASS LVI.

IRVIN & SELLERS, *Peel Hall Works, Preston ; and Park Wharf Mills, Kidderminster.*

Manufacturers of Bosses, Shuttles, Bobbins, &c., of every description used in Spinning and Weaving Cotton, Flax, Wool, and Silk ; Dealers in General Mill Furnishings.

Fabricants de Rouleaux en bois, de Navettes, de Bobines, etc., de toutes les espèces dont on se sert dans la Filature et le Tissage du Coton, du Chanvre, de la Laine et de la Soie.

Fabricanten aller Arten Bückeln, Weberschützen, Spulen etc., welche in der Spinnerei und Weberei von Baumwolle, Hanf, Wolle und Seide gebraucht werden ; liefern auch alle in's Mühlenfach schlagende Artikel.

This Firm obtained the Prize Medal at the Exhibition, 1865, for 'general excellence of articles in wood used in manufactures,' and, as importers of Boxwood, has a resident agent in Constantinople, and warehouses in Liverpool, and is thus enabled to supply all descriptions of Turkey boxwood at importers' prices.

They are the largest house of the kind in the Three Kingdoms ; of upwards of 60 years' standing ; have extensive and improved machinery at their Preston Works, where they cut up for sale all kinds of boxwood, rules, shuttle-blocks, tool handles, &c. ; also they manufacture every description of shuttles, bobbins, bosses, and other articles in wood used in spinning and weaving all fibres.

Owing to the increased demand for their goods for export, they have lately been unable to supply their friends with sufficient promptitude, but are now erecting a large mill at their timber wharf on the Worcestershire Canal, from which they have a private branch at Kidderminster ; this being in the midst of one of the finest timber districts in England, they trust by this increased facility to be enabled to execute promptly extensive orders with first-class goods at the lowest possible prices.

Agent—R. S. PARKER, 69 Rue de Béthune, Lille (Nord), France.

Agent—W. LANCASTER, Canstatt, Würtemberg.

Négociants en bois de buis, ont obtenu la Médaille à l'Exposition Internationale en 1865 'pour l'excellence générale d'articles en bois employés dans les manufactures.' Cette maison, pour faciliter l'importation du bois de buis, a un représentant à Constantinople, et des magasins à Liverpool ; elle est ainsi en état de fournir toutes les espèces de bois de buis de Turquie.

Cette maison, qui date de plus de soixante ans, est la plus grande de la Grande-Bretagne dans ce genre. MM. IRVIN ET SELLERS ont une grande quantité de machines perfectionnées à Preston, pour découper toutes les espèces de bois pour en faire des règles, des navettes, des manches d'outils, et les blocs en buis employés pour

faire les navettes, etc. Aussi fabriquent-ils toute espèce de navettes, de bobines, de rouleaux et d'autres articles en bois employés dans la filature et le tissage.

A cause de nombreuses demandes de marchandises pour l'exportation qui leur ont été adressées, ils n'ont pu dernièrement servir leurs clients avec une promptitude suffisante, mais ils font bâtir en ce moment une grande fabrique à leur quai de bois situé sur le canal de Worcestershire dont ils ont une branche particulière à Kidderminster. Cette fabrique est située dans une des régions les mieux boisées de l'Angleterre, et ils espèrent, grâce à ce nouvel établissement, pouvoir exécuter promptement et aux prix les plus modérés, les ordres qui leur seront adressés.

Importeure von Buchsbaumholz, wurden mit der Preis-Medaille bei der internationalen Ausstellung von 1865 gekrönt, 'für allgemeine Vortrefflichkeit der Artikel in Holz, welche in der Manufactur gebraucht werden.' Diese Firma, um die Einfuhr von Buchsbaumholz zu erleichtern, hält einen ansässigen Agenten in Constantinopel und Lager in Liverpool ; auf diese Weise sind sie in den Stand gesetzt, alle Arten Türkisches Buchsbaumholz zu den Einfuhrpreisen zu liefern.

Es ist das bedeutendste Haus in diesem Fache in Grossbritannien und besteht seit sechszig Jahren. Herren IRVIN & SELLERS haben in ihrer Fabrik in Preston eine grosse Anzahl vervollständigter Maschinen, um jede Sorte Buchsbaumholz für Regeln, Weberschützen, Blöcke, Werkzeugsgriffe zuzuschneiden.

In Folge der vielen auswärtigen Aufträge, welche sie erhalten haben, waren sie nicht im Stande, die Lieferzeit genau einzuhalten ; aber sie errichten jetzt eine neue Fabrik in der Nähe ihrer Holzlager, am Canal von Worcestershire gelegen, von welchem sie eine Privat-Branche in Kidderminster haben. Da diese Fabrik in einer der besten Nutzholzplätze Englands gelegen ist, so hoffen sie, mit den dargebotenen Vortheilen alle Aufträge prompt und zu den niedrigsten Preisen auszuführen.

LEEMING, JOHN, & SON, *North Holme Mills, Bradford, Yorkshire, England; Machinists, Iron Founders, &c., established 1807.*

(*By Her Majesty's Royal Letters Patent.*)

Makers of every description of Worsted Machinery, for Preparing, Spinning, Twisting, &c.; also Inventors and Patentees of numerous improvements in Looms for Weaving Plain and Fancy Goods.

Constructeurs de toutes espèces de Machines pour Filature de Laine à Préparer, Filer, Retordre, etc.; aussi Inventeurs Brevetés de nombreux perfectionnements en Métiers à Tisser les Étoffes Unies et de Fantaisie.

Fabricanten jeder Art Maschinerie zum Wollespinnen, Zurichten, Spinnen, Drehen etc.; Erfinder und Patenteigenthümer von zahlreichen Verbesserungen in Webestühlen von glatten und gemusterten Stoffen.

Comprising:—

PATENT CIRCULAR BOX MOVEMENTS for bringing into operation any shuttle which may be desired in the series, and will throw any required number of even picks with any shuttle (THIS LOOM WE EXHIBIT).

PATENT CIRCULAR BOX LOOM for throwing the next shuttle to the one last in operation; this loom may be safely run at a higher speed than any other circular box loom; attached also is a patent brake, which stops the loom with the shed open without the usual strain upon any essential part (EXHIBITED).

PATENT JACQUARD of simple construction attached to a plain loom, which enables us to weave ornamented fancy goods; at the same time effecting a large saving in the ornamenting material, also an increased rate of production, and a greatly extended field for design (EXHIBITED).

PATENT INDEX MACHINE for working 20 healds or shafts (or any less number); it will divide the warp, that is, lift both up and down, or lift all one way, and will also lift the back healds or shafts higher than the front, which is a great relief to the warp (ALSO EXHIBITED).

We are also PATENTERS AND MAKERS OF LOOMS for weaving PICK-AND-PICK.

HEAVY SERGE LOOMS.

DAMASK AND TABLE-COVER LOOMS.

LINEN LOOMS.

WOOLLEN LOOMS FOR LIGHT AND HEAVY CLOTHS.

HEAVY LOOMS SPECIALLY ADAPTED FOR WEAVING COCOA-NUT FIBRE.

Comprenant:—

MOUVEMENTS DE BOÎTE CIRCULAIRE, BREVETÉS, pour amener en opération toute navette qu'on désire dans la série, et jetteront tout nombre requis de duites égales avec toute navette (CE MÉTIER EST EXPOSÉ).

MÉTIER À BOÎTE CIRCULAIRE, BREVETÉ, pour jeter la navette suivante à la dernière en opération; ce métier peut marcher à une vitesse plus grande que tout autre métier à boîte circulaire; il est muni d'un frein, breveté, qui arrête le métier avec le pas ouvert sans l'effort ordinaire sur aucune partie essentielle (EXPOSÉ).

UN JACQUARD, BREVETÉ, de simple construction fixé à un métier uni, qui nous met à même de tisser des étoffes de fantaisie ornementées; et en même temps effectuant une grande économie de matériel d'ornement, accroissant de beaucoup la production, et ouvrant un champ beaucoup plus vaste (EXPOSÉ).

MACHINE INDICATEUR, BREVETÉE, pour travailler 20 lisses (ou tout autre nombre moins considérable); à diviser la chaîne, c'est-à-dire à la lever de haut en bas et de bas en haut, ou à la lever toute dans un seul sens; et aussi pour lever les lisses de derrière plus haut que celles de devant, ce qui est un grand soulagement pour la chaîne (AUSSI EXPOSÉ).

Nous sommes aussi les CONSTRUCTEURS BREVETÉS de MÉTIERS pour tisser duite-et-duite.

MÉTIER SÉRIÉ À SERGE.

MÉTIER À DAMAS ET TAPIS DE TABLE.

MÉTIER À TOILE.

MÉTIER À LAINE POUR DRAPS LÉGERS ET ÉPAIS.

MÉTIER SÉRIÉ SPÉCIALEMENT ADAPTÉS AU TISSAGE DES FIBRES DE NOIX DE COCO.

PATENT CIRCULAR BOX MOVEMENTS zur Bewegung eines jeden Schiffes, welches man in einer Serie wünscht, dasselbe macht auch mit irgend welchem Schiffe die verlangte Anzahl von gleichförmigen Stichen (DIESER STUHL IST AUSGESTELLT).

PATENT CIRCULAR BOX LOOM. Dieser Stuhl wirft das nächste Schiff nach dem zuletzt gearbeiteten und kann mit grösserer Sicherheit und Schnelligkeit als jeder andere derartige Stuhl benutzt werden; an selbem befindet sich auch eine Patent-Bremse, welche den Stuhl unverdeckt und ohne die gewöhnliche Erschütterung eines wesentlichen Bestandtheiles sperrt (AUSGESTELLT).

PATENT JACQUARD von einfacher Construction, an einen gewöhnlichen Webstuhl befestigt, wodurch es uns ermöglicht wird, verzierte Modestoffe zu weben. Zu gleicher Zeit wird viel Material zur Verzierung erspart, grössere Erzeugung erzielt und eine weitere und bessere Auswahl von Dessins gestattet (AUSGESTELLT).

PATENT-INDEX-MASCHINE zur Arbeit mit 20 Schäften (oder weniger); sie theilt die Kette, nämlich hebt sie aufwärts und abwärts, oder thut nur das Eine, und hebt die Rückschäfte höher als die vorderen, was eine grosse Erleichterung für die Kette ist (AUCH AUSGESTELLT).

Wir sind auch PATENTEIGENTHÜMER UND FABRICANTEN VON WEBESTÜHLEN (PICK-AND-PICK).

DAMAST- UND TISCHTÜCHER-WEBESTÜHLE.

LEINWAND-WEBESTÜHLE.

WOOLLENWEBESTÜHLE FÜR LEICHTE UND SCHWERE TUCHE.

SCHWERE WEBESTÜHLE, BESONDERS FÜR COCUSNUSSFASERN GEEIGNET.

PARKER, CHARLES, ET FILS, *Lady Bank Works, et Clepington Foundry, Dundee, Écosse.*

Agent—R. S. PARKER, 69 Rue de Béthune, Lille, France.

Métiers Mécaniques, et Machines Préparatoires s'y rattachant, spécialement adaptés à la Fabrication des Toiles, et Tissus de Jute et de Chanvre.

Dampfwebestühle und Zubereitungs-Maschinerie für dieselben, besonders für Linnen-, Indische Hanf- und Hanf-Fabricate geeignet.

Ont obtenu une Médaille du Conseil à l'Exposition Universelle de Londres, 1851; une Médaille d'Honneur en Or à l'Exposition Internationale de Paris, 1855; et une Médaille à l'Exposition Universelle de Londres, 1862.

Ayant consacré notre attention spéciale, durant presque un quart de siècle, à la construction de métiers mécaniques et machines préparatoires, adaptés à la fabrication des toiles et tissus de jute et de chanvre, et possédant de nombreux clients dans presque toutes les parties du monde, nous pouvons dire avec confiance, que nous sommes en mesure de fournir à quiconque nous confiera ses commandes les meilleurs métiers possibles, tant pour l'excellence de la main-d'œuvre que pour les matières premières employées dans leur construction, et comprenant les perfectionnements les plus récents.

Dundee étant port de mer, offre de grands avantages pour transport.

Tous renseignements volontiers fournis sur demande, adressés soit directement à Dundee, soit à M. R. S. PARKER, Lille.

Erlangten eine 'Council'-Medaille auf der allgemeinen Ausstellung zu London, 1851; eine goldene Ehren-Medaille auf der internationalen Ausstellung zu Paris, 1855; und eine Preis-Medaille auf der allgemeinen Ausstellung zu London, 1862.

Da wir unsere ausschliessliche Aufmerksamkeit seit ziemlich einem Vierteljahrhundert auf die Construction von Dampfwebestühlen und Zubereitungs-Maschinerie, welche zur Fabrication von Linnen-, Indischen Hanf- und Hanf-Manufacturwaaren gebraucht wird, gerichtet haben, und da wir eine grosse Geschäftsverbindung mit fast allen Theilen der Welt besitzen, so können wir mit vollem Vertrauen sagen, dass wir im Stande sind, allen denjenigen, welche uns mit ihren Aufträgen beehren werden, die bestmögliche Maschinerie zu liefern, sowohl was Arbeit, Qualität des angewandten Materials, als auch die neusten Verbesserungen anbetrifft.

Da Dundee ein Seehafen ist, so bietet dies grosse Vortheile für billige Versendung.

Jede gewünschte Auskunft wird mit Vergnügen ertheilt, auf gefällige Anfrage bei unserm Hause in Dundee oder bei Herrn R. S. PARKER, Lille.

URQUHART, LINDSAY, & CO., *Blackness Foundry, Dundee, Scotland.*

Exhibitors of Patent Power Loom, in motion.

Exposants d'une Machine à tisser la toile (fonctionnante).

Aussteller von patentirten Webestühlen für und in Maschinenbetrieb.

Makers of every description of power looms, for plain and twilled cloth, of every quality and weight of fabric; calenders; cropping, damping, and measuring machines; and hydraulic packing presses. Warp and weft winding machines on the best principles; patent machines for softening and batching jute and hemp; steam engines, steam cranes, and steam pump; saw benches and improved tenoning machines; also all shafting, gearing, bracketing, &c. required in factories and other works.

Designs, specifications, and estimates furnished for spinning mills, weaving factories, bleachworks, flour, corn, and saw mills, &c. &c.

Fabricants de toute espèce de métiers mécaniques brevetés, pour toiles unies et croisées, de chaque qualité et poids; de calandres; de machines pour couper (cropping machines), humecter et mesurer les tissus; de presses hydrauliques pour emballer; de machines à bobiner la trame et ourdir la chaîne de parfaite construction; de machines brevetées pour amollir et mêler (batching machines) le jute et le chanvre; de machines à vapeur; de chèvres

de toutes sortes et pompes à vapeur; de tables à scier, et de machines pour couper tenons; et conducteurs requis, ainsi que tout genre de transmission usée dans les fabriques.

Ils fournissent les dessins et détails pour des filatures, tisseranderies, blanchisseries, moulins de farine et de blé, etc. etc.

Liefern alle Arten Webestühle sowohl für gewöhnliche wie zu Tuchen mit Dessin, von jeder Qualität und Feinheit; ferner Calander-, Schier-, Appretur- und Tuchmessmaschinen; hydraulische Packpressen; Windmaschinen in vorzüglichster Construction; patentirte Hanf- und Jute-Reib- und Vorarbeitungs-Maschinen; Dampfmaschinen, Dampfmaschinen, Dampf-Krahnen; Kreissägen, verbesserte Zapfenschneid- und Lochstamm-Maschine, so wie ganze Fabrikeinrichtungen, wie Transmissionen, Riemscheiben, Lager etc. etc.

Zeichnungen, Preislisten und Ueberschläge für Spinnereien, Webereien, Bleichereien, Mahl- und Sägemühlen etc. etc. stehen mit Vergnügen zu Diensten.

CLASS LVII.

NEWTON, WILSON, & CO., 144 High Holborn, w.c., and 144 Cheapside, E.C., London.

Sewing Machines and their Products—*Machines à Coudre et leurs Produits.*

Nähemaschinen und deren Erzeugnisse—*Macchine da Cucire e loro Prodotti.*

These machines include the newest and best hand machines, also table machines for any kind of use, family or manufacturing. Hand machines, Queen Mab, 3*l*. 3*s*., and Cleopatra, 4*l*. 4*s*.; Penelope (lock stitch) 5*l*. 5*s*. Stands for any of these at 1*l*. 1*s*., 2*l*. 2*s*., and 3*l*. 3*s*. No fixing is required. Lock or knotted stitch machines on tables or stands, with cover complete, from 8*l*. 8*s*. to 10*l*. 10*s*. New bootcloser's machine, 9*l*. 9*s*. and 10*l*. 10*s*. The 'Duplex,'

with instantaneous double action, 14*l*. 14*s*. The 'Crispin,' for all purposes for tailors or bootmakers, with universal feed, 16*l*. 16*s*., without change of parts or alteration of motion. The work exhibited comprises a magnificent dressing-gown and smoking-cap, child's dress, with model complete, and specimens of ornamental work in boots and shoes. Illustrated catalogues in English, French, German, and Italian, to be had at the stand.

Ces machines comprennent les machines à main les plus nouvelles et les meilleures, ainsi que les machines à table pour tout usage, de famille ou de fabrique. Machines à main, la 'Reine Mab,' 78 fr. 75 c.; la 'Cléopâtre,' 105 fr.; la 'Pénélope' (à point fermé), 131 fr. 25 c. Pieds pour toutes ces machines, 26 fr. 25 c., 52 fr. 50 c., et 78 fr. 75 c. N'ont pas besoin d'être fixées sur place. Machines à piqûre arrêtée ou à point de chaînette, sur table ou pied, avec enveloppe complète, de 210 fr. à 262 fr. 50 c. Nouvelle machine à piquer les chaussures, 236 fr. 25 c. à 262 fr. 60 c. La 'Duplex' à double effet instantané, 367 fr. 50 c. La 'Crispin,' pour tous usages de tailleurs ou bottiers, avec alimenteur universel, 420 fr., sans changement de pièces ou modification de mouvement. Les ouvrages exposés comprennent une magnifique robe de chambre et un bonnet grec,

une robe d'enfant, avec modèle complet, et spécimens d'ornementation pour bottines et souliers. Catalogues illustrés en Anglais, Français, Allemand et Italien, se procurent à leur exposition.

Diese Maschinen begreifen in sich das Beste, was in Hand- und Gestell-Maschinen zum Familiengebrauch oder für Fabriken bis jetzt hervorgebracht worden ist. Handmaschinen, 'Queen Mab,' 3*l.* 3*s.*; 'Cleopatra,' 4*l.* 4*s.*; 'Penelope' (geschlossener Stich—Lock-Stich), 5*l.* 5*s.* Gestelle zu jeder dieser Maschinen,

Illustrierte Cataloge in Englisch, Französisch, Italienisch und Deutsch werden von den Ausstellern auf Verlangen gegeben.

ghinee. La 'Crispin,' per tutti i lavori di sarto o di calzolaio con alimentazione universale, 16 ghinee, senza cambiamento di parti o variazione di movimento. I lavori esposti comprendono una magnifica vesta da camera, una berretta ricamata, un vestito da bambino con modello completo, e saggi di lavori d'ornato in scarpe e stivali. Cataloghi illustrati in Inglese, Francese, Tedesco e Italiano si possono avere all'Esposizione.

CLASS LIX.

MILLER & RICHARD, *Type Founders to Her Majesty,*

HAVE always ready for delivery founts in their Extra Hard Metal. These they confidently recommend, as several years' trial under the HOE and other machines has demonstrated that their durability is at least *double* that of founts of the ordinary metal.

THEIR Type receives a preference by offices where the work is on the largest and most rapid scale, which affords the best guarantee that the *Printers' interest* would be best served by its introduction. They have effected great improvements in their manufacture, which enable them to supply founts of their superior metal at a very important *reduction of price*.

THEIR Series of Old Style Founts (in which these columns appear) is complete. It ranges from Two-line Great Primer to Pearl—*twelve different sizes*,—with plain and ornamental initials, head and tail pieces, and corners. Where unique elegance and beauty of typography are desired, this series will be found peculiarly suitable.

ONT toujours en main des fontes de leur métal extra dur. C'est en toute confiance qu'ils peuvent les recommander, une expérience de plusieurs années dans les machines de HOE et autres, ayant prouvé que leur durabilité est au moins *double* de celle de fontes en métal ordinaire.

C'EST leur caractère qui a la préférence dans les grandes imprimeries où le travail s'exécute avec rapidité, et sur la plus grande échelle prouve que les *Imprimeurs auront tout à gagner en s'en servant*. Comme ils en ont fort perfectionné la fabrication, ils sont à même de fournir des fontes de leur métal qualité supérieure à *un rabais considérable*.

LEUR série de fontes d'après les vieux modèles (dont on s'est servi pour l'impression de ces colonnes-ci) est complète. Elle comprend *douze corps différents*, du Two-line Great Primer à Pearl, lettres initiales simples et de fantaisies, titres courants, culs-de-lampe, et coins. Cette série est unique par son élégance et sa beauté typographique.

MILLER & RICHARD, *Type Founders to Her Majesty.*

MILLER AND RICHARD manufacture brass rules of every description; mitred page rules; stereo-type blocks; galleys of all kinds; the improved *pinned* cases; chases of cast and wrought iron; composing sticks of iron, brass, and mahogany with brass slide; boxwood shooting sticks, also tipped and bound with iron or brass; wood and French metal furniture; and *every other requisite* for a Printing Office, all of the best quality and at reasonable prices.

THEY invite attention to their Wood Letter, as its accuracy in size and height to paper, combined with its superior finish, and the well-seasoned material on which it is cut, *render it equal* to large metal type.

THEY supply the new patent 'Mechanical Quoins' for locking up formes, which dispense with wooden side and foot sticks, mallet and shooter, and wooden quoins. This useful invention consists of a quoin in tempered metal which is provided with teeth, and the little apparatus is completed by a cog with corresponding teeth, which is turned by a key. They are now very generally used for every class of work, and are a great desideratum from their economy, security, and durability. By the employment of this *locking-up apparatus*, formes may be kept standing for any length of time, as it is not affected either by dryness or humidity like the wooden quoin.

THEY keep stock of printing presses, galley presses, and proof galley presses, cylindrical and common inking tables, imposing surfaces, improved paper-cutting machines; also of press and machine blankets of various thicknesses and widths, and machine tape of the best make, and at the manufacturers' prices.

THEY supply founts from the matrices of the Music Type of the late Messrs. Sinclair & Sons of Edinburgh. They obtained all the Long Primer matrices and moulds of the late Foundry of Messrs. Ferguson Brothers; and also the greater number of the punches, matrices, and moulds of the late Foundry of Messrs. Milne & Co. of Edinburgh; and will be happy to *supply founts or sorts to any extent*.

THEY purchased the Goodwill of the Business of the late Messrs. S. & T. Sharwood, of the Austin Letter Foundry, London, and also the matrices of their principal useful and modern Jobbing Letter, and having added largely to them from the newest styles of Ornamental Letter, they can promptly furnish a *complete Printing Office*, on any scale, with the most modern and most durable founts that can be produced.

MM. MILLER ET RICHARD fabriquent des filets anglais en cuivre jaune de tout genre; filets mitrés pour pages; blocs stéréotypés; coulisses de toute espèce; casses perfectionnées à chevilles; châssis de fer fondu et forgé; composteurs de fer, de cuivre jaune, d'acajou à coulisse de cuivre; fournitures de bois et de métal français; en un mot tout ce *qui est nécessaire* dans une imprimerie de la meilleure qualité et à des prix très-modérés.

LEUR caractère de bois se recommande par son égalité parfaite, ce qui le rend propre au papier, son grand fini et l'excellente qualité de bois séché, dont il est fabriqué, ce qui le *rend égal* au grand caractère de fonte.

ILS fournissent les nouveaux 'Coins Mécaniques' brevetés qui rendent inutile l'emploi de biseaux de bois, de maillet et décoignoir, et de coins de bois. Cette utile invention consiste en un coin de métal trempé à dents, le petit appareil étant complète par un cran à dents correspondantes, que l'on trouve au moyen d'une clef. On s'en sert maintenant pour toute espèce d'ouvrage, et elle se recommande par son économie, sa sûreté, et sa durabilité. En se servant de cet *appareil-ci*, on peut laisser les formes de côté aussi longtemps que l'on veut, car il n'est point comme les coins de bois, sujet à l'influence de la sécheresse et de l'humidité.

ILS ont en magasin des presses d'imprimerie; de coulisses, éprouvées; des tables d'encrier cylindriques et ordinaires; des marbres; des machines, coupe-papier perfectionnées; des blanchets pour presses et machines, de largeurs et d'épaisseurs différentes; des rubans de machine, première qualité, et aux prix de fabrique.

ILS fournissent les fontes des matrices des caractères de musique provenant de l'ancienne fabrique de M. M. Sinclair et Fils, à Edimbourg. Ils ont acquis toutes les matrices et tous les moules des Long Primer de l'ancienne usine des M. M. Ferguson Frères; et de la grande partie des emportepièces des matrices et des moules de l'ancienne usine de M. M. Milne et Cie, à Edimbourg, et ils sont prêts à livrer *fontes ou sortes de toute espèce*.

ILS ont acquis la clientèle de l'ancienne 'Austin Letter Foundry,' appartenant aux M. M. Sharwood et Fils, à Londres, et aussi les matrices de leurs principales lettres éventuelles modernes les plus utiles, et y ayant largement ajouté les genres les plus nouveaux de lettres de fantaisie, ils peuvent fournir tout de suite, les fontes les plus modernes, et les plus durables qui se puissent produire pour une *Imprimerie complète* sur quelque échelle que ce soit.

CLASS LX.

HER MAJESTY'S POSTMASTER-GENERAL.

MODELS OF APPARATUS AND MACHINES ILLUSTRATING THE ARRANGEMENTS ADOPTED AT THE GENERAL POST-OFFICE, LONDON.

1. MODELS OF RAILWAY MAIL CARRIAGES.*

These models represent the mail carriages in use by the limited night mail train on the London and North-Western line of railway, and are technically known as (A) railway post office; (B) district sorting carriage; and (C) tender.

The three carriages are connected by a gangway (i.e. a covered passage over the buffers), thus allowing the officers employed in them to pass from one carriage to another when the train is in motion; the entire length of the carriages when thus joined being 77 feet.

In the railway post office (A) the work performed consists in the collecting and distributing the *cross post* correspondence, i.e. the letters and newspapers passing between one provincial post town and another. Thus, on the journey from London to Carlisle, a distance of 300 miles, 152 bags are received at 26 different railway stations, and the letters (27,000) and the newspapers (3,900) are sorted and despatched in 122 bags to the respective towns for which they are intended.

In the district sorting carriage (B), *only London letters and newspapers* are dealt with, the work on the journey from London to Preston, a distance of 210 miles, consisting in the letters (17,000) and newspapers (6,200) for 80 towns being sorted and despatched in the respective bags for those towns; thus relieving the chief post-office in London at the busiest time of the day, and enabling the mails to be dispatched from London with punctuality. On the journey to London the officers are employed in sorting the letters (12,250) for the 10 London postal districts, and in aggregating the bundles of postal district letters which are sorted at the large towns, in order to accelerate the first morning delivery of letters in the metropolis.

The tender (C) is used for conveying certain bags for the larger towns, made up at the chief office, and at some of the provincial post-offices; but as ordinary vans are attached to a mail train for a similar purpose, this tender (C), to which the mailbag apparatus is attached, is used mainly for receiving and delivering mailbags at those stations at which the train does not stop; on the journey from London to Carlisle (300 miles) the apparatus is brought

into use 20 times, thus saving much loss of time in stopping at smaller stations.

2. MODEL OF THE 'CONNAUGHT' STEAMSHIP, EMPLOYED ON THE MAIL SERVICE BETWEEN HOLYHEAD AND KINGSTOWN.

The ship is built of iron by Messrs. Laird of Birkenhead. The length between the perpendiculars is 348 feet; the beam is 35 feet, and depth 20 feet. There are nine principal iron watertight bulkheads, which not only provide for the safety of the ship in case of accident, but add greatly to her strength in a seaway. Between the paddleboxes an upper deck, about 50 feet in length, has been placed. It is laid on iron beams well secured, and being provided also with diagonal tieplates it further adds to the strength amidships. It forms an agreeable promenade for the passengers in moderate weather. The wheel and the binnacle are placed on this upper deck. The entire of the main deck, from the foremost funnel to the bows, is covered over by a hurricane deck, which has been found of great advantage in throwing off the seas.

The engines, on the oscillating principle, were made by Messrs Ravenhill, Salkeld, & Co.; the cylinders are 98 inches diameter, with a length of stroke of 6 feet 6 inches. The eight boilers are multitubular, four at each end of the engine-room space, arranged in pairs, with one funnel to each pair. The wheels are constructed on the feathering principle. On the trial trip, the engines worked at the rate of $25\frac{1}{2}$ revolutions per minute, under a steam pressure of 25 lbs. per square inch. The mean of the runs at the measured mile in Stokes Bay, was at the rate of $20\frac{3}{4}$ statute miles an hour, a greater speed by upwards of one mile an hour than had been previously attained.

She has made 2,585 passages of the Channel from October 1, 1860, and December 31, 1866, in the average time of 3h. 54m., 4 inclusive of the delays caused by storms or fogs, or at the rate of $16\frac{1}{4}$ statute miles per hour; the shortest passage was made in 3h. 14m., nearly 20 miles an hour. No breakdown, collision or accident of any kind has taken place since the ship commenced the service, on October 1, 1860.

The saloons and cabins are large, lofty, and well-ventilated. The principal one is upwards of 60 feet in length, by 17 feet in breadth, and 9 feet 6 inches in height. On each side of this saloon there are state-rooms. The ladies'

* The model carriages now exhibited were built by the London and North-Western Railway Company at their works at Wolverton, under the directions of Mr. Bore, their chief superintendent.

saloon and cabins are entered from a large deck-house by a separate staircase. First-class passengers have excellent sleeping cabins in other parts of the ship; and there are also two commodious deck cabins, one of which is appropriated as a smoking room.

The cost of the ship complete was 90,000*l*.

One of the principal peculiarities which render this and the other vessels for the Irish mail service of so unique a class, is the post-office fitted for sorting letters during the passage. The space occupied for this purpose extends across the entire breadth of the vessel, and for the length of 30 feet, between the first and second class cabins. It is divided into two rooms; one for letters, and the other for newspapers. In these rooms, the sacks are opened, the contents taken out and arranged by eight or ten sorters, under the direction of a head superintendent. The letters are stamped with the post-office stamp, the postage labels cancelled, and all the operations completed, so that the letters are ready for delivery on the arrival of the vessel at Kingstown, thus effecting a considerable saving of time in the delivery, as well as accelerating the transmission of the provincial letters through Dublin.

3.—MODEL OF POST-OFFICE COUNTER, WITH POSTE RESTANTE FITTINGS, MONEY DRAWER, ETC.

4.—TABLE ON WHICH MAIL BAGS ARE OPENED, AND LETTERS STAMPED, WITH FITTINGS. MACHINE FOR STAMPING LETTERS, INVENTED BY MR. PEARSON HILL, AND SPECIMENS OF STEEL AND WOODEN DATE STAMPS, AND STEEL STAMPS FOR CANCELLING LABELS. STAMPING PADS.

5.—MODEL OF TABLE ON WHICH LETTERS ARE SORTED, FITTED WITH REVOLVING LABELS.

6.—TABLE WITH DIVISIONS INTO WHICH LETTERS ARE FINALLY SORTED FOR DISPATCH, WITH SEALING APPARATUS, AND OTHER FITTINGS.

7.—MODEL OF MAIL VAN.

Diagram showing the London district Mail Cart Services.

Map of letter carriers' walks in Eastern Central and Western Central districts of London.

Specimens of indicators of post offices.

„ „ for lamps and lamp posts.

Specimens of stencil plates used for marking mail bags.

MODEL OF MAIL COACH IN USE BEFORE THE INTRODUCTION OF RAILWAYS.

This is believed to be the most perfect model ever made of an English mail coach. It was built in 1836, by Mr. Harris, a London coach builder, at a cost of £57. The gradual introduction of railways has caused the use of mail coaches to be superseded, except on two or three roads in Scotland and Ireland.

MODEL OF NEW ARGAND ROOF LAMP, IN USE IN TRAVELLING POST-OFFICE CARRIAGES ON RAILWAYS.

This lamp burns with two glasses. The whole of the air supplied to the lamp is deflected through the flame, by which means perfect combustion is obtained, and a pure white light is the result.

The lamp, when filled with oil, will burn ten hours, consuming a pint and a half of oil, at a cost of about ninepence.

The lamp is patented, and is manufactured by Mr. Dawson, of Piccadilly, London.

8.—MODEL OF PILLAR LETTER BOX WITH FITTINGS.

Model of wall letter box, with fittings and frame, showing how the box is fixed.

Specimens of canvas bags in which mails are forwarded, with the different modes of fastening adopted; also specimens of letter carriers pouches.

9.—SPECIMENS OF THE BOOKS, FORMS, AND RECEIPTS USED FOR RECORDING THE ADDRESSES OF REGISTERED LETTERS ON THE MANIFOLD SYSTEM.

Specimens of scales for weighing letters adapted to English, French, and Prussian weights.

Specimens of letter carriers' uniform, cap and cape.

SCIENCE AND ART DEPARTMENT, SOUTH KENSINGTON, LONDON.

DUSTING MACHINE.

This machine was constructed by the late Captain Fowke, R.E., for the purpose of dusting art objects in the South Kensington Museum, such as wood-carvings, marble work, plaster casts, and other ornamental work. Previous to the adoption of this machine, objects were dusted with the ordinary feather dusters, imperfectly and at a great cost of labour, and the objects became much dirtied on the surface. The machine consists of a rotary fan of the usual form, but is made of wood instead of iron, whereby it not only runs lighter, but is

quite noiseless; it is worked by hand, by a fly-wheel, gut, and pulley, running on wood bearings, making about 900 revolutions per minute. Attached to the fan is a hose of somewhat singular construction, being made of two thicknesses of leather interwoven with crinoline steel, and made in lengths, with brass connecting joints. It is portable, and can be wheeled easily by one man. It has been in use for the last two years at the South Kensington Museum, and found to be well adapted to the purpose, and is used for dusting objects in this Exhibition.

French Treaty Medal, Paris, 1863;
First-Class Silver Medal, Cologne, 1865;
Jurors' Medal, Dublin, 1865;
Gold Medal of Honour, Oporto, 1865.*

The carriages shown are—An 'Epsom Drag' for four horses, built on the most approved lines and measurements of the Four-in-hand Club, with various improvements and conveniences to adapt it to the wants of the present time. The lever break is worked from the hind seat—such carriages when in use being always accompanied by one or two grooms, it is considered better to relieve the driver from working the break. To render the carriage more suitable for pic-nics and races, the boot doors are made to fall down as tables, the front boot sides also let down as tables, and a folding mahogany table is made to pass quite through the body of the carriage, and project on each side. The plate and cutlery are carried in a box with suitable divisions, fitting into the top of the front boot, through a concealed trapdoor.

A capacious basket carries lunch in the front boot.

A folding box on the roof carries glass, and portions of the lunch.

The ice-wells, of polished mahogany, lined with zinc, are fitted in the hind boot; and on a shelf over the ice-wells the folding table is carried when not in use.

Nets are provided in the interior for parcels and umbrellas.

A 'Light Park Barouche,' hung on under and C springs, leather braces, and wrought iron perch. The utmost care has been taken

Les voitures exposées sont :—Un 'Epsom drag' pour quatre chevaux, construit d'après les mesures et lignes les plus approuvées du 'Four-in-hand Club,' avec divers perfectionnements fort commodes destinés à l'adapter aux besoins de l'époque actuelle. Le levier du frein se manœuvre du siège de derrière—ces sortes de voitures étant, quand on s'en sert, toujours accompagnées d'un ou deux palefreniers, on a pensé qu'il valait mieux débarrasser le cocher du soin de manœuvrer le frein. Pour que cette voiture soit plus commode pour les courses ou des 'pic-nics,' les portes des bateaux sont ajustées de façon à s'abattre comme des tables, de même que les côtés du bateau de devant, et de plus une table pliante en acajou, traversant d'un bout à l'autre le véhicule, se projette sur chaque côté. L'argenterie, les couteaux, etc., se transportent dans une boîte à compartiments convenables, s'ajustant sur le dessus du bateau de devant au moyen d'une trappe dissimulée.

Un vaste panier sert à contenir les comestibles dans le bateau de devant.

Une boîte pliante sur l'impériale renferme les objets en verre et faisant partie du service de collation.

Les seaux à glace, d'acajou poli, doublé en zinc, sont fixés dans le bateau de derrière. Sur un rayon au-dessus d'eux se place la table pliante quand on ne s'en sert plus.

Enfin des filets sont disposés à l'intérieur pour les paquets et parapluies.

Une 'Light Park Barouche,' à double suspension, avec soupentes de cuir, et perche de fer forgé. Les meilleurs moyens ont été em-

Médaille de Juré, Dublin, 1865 ;
Médaille d'Honneur en Or, Oporto, 1865.*

to render the carriage not only light and graceful, but comfortable and easy.

This principle of construction was introduced by GEORGE HOOPER, in 1846, and after being well tested by use, was more prominently put forward in the Exhibition of 1851, when a prize-medal was awarded to it. The plan has been so much approved, that it has changed the construction of almost all suspended carriages, not only in England, but in Europe and America, rendering them lighter, and capable of being drawn by smaller horses, besides enabling C spring carriages to be used in hilly countries ; their weight in former times almost preventing their use in such parts.

A collection of drawings also representing carriages recently built by the firm for various royal personages and others of high rank.

A series of designs of carriages richly decorated to suit the tastes of Oriental customers.

A series of drawings by workmen in the employ of the firm.

A light 'Brougham' harness, made of the best Russian harness leather, and about half the weight of ordinary harness. Harness of this kind is in constant use, and has been well tested for strength and durability.

ployés pour réunir dans cette voiture la légèreté et l'élégance à l'agréable et à la commodité.

Ce principe de construction—dont GEORGE HOOPER fit le premier l'application, en 1846—après avoir été bien éprouvé par l'usage, conquit une place plus prééminente à l'Exposition de 1851, où une médaille lui fut décernée. Ce plan a reçu une approbation si générale, que le système de construction de presque toutes les voitures suspendues a été changé par son introduction, non seulement en Angleterre, mais dans toute l'Europe et en Amérique ; car il les rend plus légères, par conséquent susceptibles d'être tirées par des chevaux de moindre taille, et permet en outre l'usage des voitures sur ressorts en C dans les pays montagneux, où leur pesanteur empêchait jadis presque totalement de se servir de véhicules à ces ressorts en général.

Une série de modèles de voitures, représentant des voitures récemment construites par la maison HOOPER pour divers personnages royaux, et autres de tout rang.

Une série de projets de voitures richement décorées pour s'adapter aux goûts de leurs clients orientaux.

Une série de dessins et modèles par des ouvriers qu'emploie la maison HOOPER.

Un harnais léger pour 'Brougham,' fabriqué avec le meilleur cuir de Russie pour harnais, et pesant environ moitié moins qu'un harnais ordinaire. Des harnais de cette espèce sont constamment en usage, et l'expérience en a démontré la solidité et la durée.

McNAUGHT & SMITH, Worcester, England.

Carriage Builders and Harness Makers.

Constructeurs de Voitures, Fabricants de Harnais.

Awarded a Prize Medal at the International Exhibition, London, 1862, for 'Good Proportions, Workmanship, and Materials; and Good Taste in Colours.'

1862, Londres, Exposition Universelle, Médaille d'Honneur pour 'proportions bien assorties, bon choix de matériaux, élégance de travail et de bon goût.'

Light Pair-Horse Barouche—*Caièche Légère à Deux Chevaux.*

This carriage illustrates the advantages derived from the substitution of malleable steel for iron in its various parts, and the employment of American hickory and bent rims in the construction of the wheels.*

The manufacturers believe that they now present, on a small scale, a carriage which will bear comparison, for comfort and beauty of appearance, with any of larger size; and which, without sacrificing any of the elegant and unrivalled characteristics of the BAROUCHE, is well within the power of the LIGHT HORSES now so much in request.

ILLUSTRATED CATALOGUE, containing designs and descriptive letterpress of almost every description of MODERN CARRIAGE, DOG-CART, BASKET CARRIAGE, AND HARNESS, forwarded free by post on application.

Cette voiture, excessivement solide quoique de la plus grande légèreté, tant par l'emploi d'acier malléable, dans diverses parties des ferrements, que par l'emploi du bois de hickory d'Amérique, appliqué aux roues—est spécialement recommandée par MM. McNAUGHT ET SMITH, comme pouvant par ses belles proportions, sa légèreté, et son confort remplacer toute autre grande voiture de ce genre, résolvant ainsi le problème si difficile aujourd'hui, d'avoir des voitures élégantes, solides, légères et spacieuses, aptes au service, fait avec des chevaux de trait légers, comme ceux d'aujourd'hui.

Un catalogue illustré, contenant tous les dessins, descriptions et prix de tous les genres de voitures, sera adressé franc de port, sur demande.

* MESSRS. McNAUGHT & SMITH would point out as worthy of special attention the very artistic and workmanlike manner in which the various parts are constructed; this being a distinguishing feature in all carriages of their manufacture.

ROCK & SON, *Hastings, England.*

Carriage Patentees and Manufacturers.

Automatic or Balanced-head Landau—*Landau Automatique ou Soufflet à Bascule.*

One person seated in the carriage can open or close the head with the greatest ease, without the aid of coachman or footman.

Une personne assise dans la voiture peut, avec la plus grande facilité, ouvrir ou fermer la voiture, sans l'aide d'un cocher ou d'un domestique.

CLASS LXII.

BLACKWELL, *Patent Saddlery and Harness Manufacturer to Her Majesty and the Prince of Wales, 259 Oxford-street, London, W., near the Marble Arch.*

Manufacturer of Patent Saddlery and Harness.
Fabricants d'articles de Sellerie et Harnais, brevettés.

(In the Paris Exhibition, Group VI. Class 62, English Saddlery.)

Led Horses at Exercise, to prevent falling, and broken knees.

Chevaux à la promenade, en main, pour les empêcher de s'abattre et de se couvrir.

Awarded the Prize Medals, London, 1851 and 1862; Dublin, 1865; Cologne, 1865; and the only First Class Medal, Paris, for Saddlery, for—

Whalebone and gutta-percha jockeys, for breaking horses, easy mouthed and temperate, with spring reins of any strength, 56s. to 64s. Above 2,500 in use. On hire, 2s. a week.

Médailles à Londres, en 1851 et 1862; Dublin, 1865; Cologne, 1865; et a obtenu l'unique Médaille de Première Classe à Paris pour—

Jockeys brevetés en baleine et gutta-percha, pour dompter et dresser les chevaux, et les accoutumer doucement au mors, avec des ressorts en caoutchouc de toutes les forces. Prix, 80 fr. 2,500 sont en usage en Angleterre. Pour louage, 2 fr. par semaine.

Safety spring driving and riding reins to both bits, and one rein in hand, very safe for ladies, 8s. to 12s. 2,000 in use.

Straps to prevent crib-biting, and three sorts of crib muzzles, 18s. each. 1,500 in use.

Vulcanised rubber spring hooks for reins, &c.

Vulcanised india-rubber springs for saddle straps, girths, rollers, belts, &c., 2s.

Web boots of all widths, for fetlock, leg, and speedy cut, elastic and porous, 3s. to 9s. Knee boots for travelling and exercising, 8s. Patent springs, 10s. pair; with solid india-rubber pads, 12s.

Horses' legs and other parts fomented, by streams of hot water (or cold), by patent apparatus of vulcanised rubber. Perforated tube, 12s. If regulated by a tap, 15s.

Wholesale of the India-Rubber and Gutta-Percha Company, 2 Bishopsgate-street, E.C., and Silvertown; and 16 Rue de la Banque, Paris.

To be had of all saddlers.

Agent in Paris Exhibition, MAURICE SAUTTER, Cabinet de Brevets d'Invention, 50 Rue de la Chaussée d'Antin. The French patents for sale. Apply to M. SAUTTER for price, &c.

Ressorts en caoutchouc pour rênes attachés aux deux mors, une en main seulement, très-sûrs pour dames et aussi pour conduire les chevaux qui ont la bouche tendre et qui sont rétifs à la gourmette. Prix, de 10 fr. à 15 fr. 2,000 en usage.

Anti-col tiqueur en gutta-percha, pour empêcher le cheval de mordre sa mangeoire. Prix, 22 fr. 50 c. 1,500 en usage.

Ressorts en caoutchouc, pour courroies de selles, sangles, etc. Prix, 2 fr. 50 c.

Crochets en métal (avec ressorts en caoutchouc), pour fouets d'artillerie, cravaches, etc. et pour chaînes, rênes, etc.

Appareil, breveté, en caoutchouc vulcanisé, pour fomentations des jambes et autres parties du corps, des chevaux, au moyen de courants d'eau chaude. Tube perforé, 15 fr. S'il est réglé par une cannelle, 18 fr. 75 c.

Se trouve en gros dans les magasins de la Compagnie de Caoutchouc et de Gutta-Percha, 2 Bishopsgate-st., E.C., et à Silvertown; et 16 Rue de la Banque, Paris. Se vend chez tous les selliers.

Agent pour l'Exposition de Paris, MAURICE SAUTTER, Cabinet de Brevets d'Invention, 50 Rue de la Chaussée d'Antin. Les brevets français sont à vendre. S'adresser à M. SAUTTER pour le prix, etc.

RUSSELL & CO., *Patent Sectional Wheel and Axle Factory, "Esher-street, Westminster, London, S.W.*

Axle (A) is retained in its place by the collar (B), which is in two half-segments. The collar (B) is retained in its place by the gun-metal cap (C), which screws into the outer stock (D), and is kept from turning by a keep-screw (X). The axle is kept constantly lubricated by oil supplied at the screw-hole (E) on the hinder stock (F). The nuts (G) confine the spokes at the arch.

This wheel differs from all others in the simplicity of its principle. Its advantages over the old wheel are, its lightness, strength, durability, elegance, and cheapness. It is suitable for all carriages, the heaviest and the lightest vehicle; also to gun carriages, from the easy way it can be conveyed in small cases, and repaired in case of accident, for, by unscrewing the nuts (G), and removing the front stock (D), any spoke or felloe can be immediately replaced.

L'essieu (A) est maintenu en sa place par le collier (B), qui se compose de deux demi-segments. Le collier (B) est lui-même maintenu en sa place par la calotte en métal à canon (C), qui se visse dans le moyeu extérieur (D), et qu'empêche de tourner une vis de maintien (X). L'essieu est constamment lubrifié par l'huile fournie au trou de vis (E) sur le moyeu postérieur (F). Les écrous (G) retiennent les rayons fixés à l'arcade.

Cette roue diffère de toutes les autres par la simplicité de son principe. Ses avantages sur l'ancienne roue sont sa légèreté, sa solidité, sa durabilité, son élégance, et son bon marché. Elle convient pour toutes les voitures, les plus lourdes comme les plus légères; ainsi que pour les affûts de canon, en raison de sa facilité de transportation en petites caisses, et de réparation en cas d'accident, car, en dévissant les écrous (G) et enlevant le moyeu antérieur (D), tout rayon ou toute jante peut se remplacer immédiatement.

RUSSELL & CO., *Patent Sectional Wheel and Axle Factory, Esher-street, Westminster, London, S.W.*

The spokes are not mortised into the stocks, but they abut against each other (as at A), forming a wood arch, which prevents shrinking, displacement, or rattling; so that every concussion is equally distributed through the entire arch, and thus every spoke bears its own share of the work.

The metal stocks (see axle, D and F) being in two parts, may be removed to examine the condition of the spokes at the arch, and an extra turn of the nuts (G) will keep the spokes solid and dry. The hollow tire (H) has also great advantages. It cannot possibly come off, it protects the sides of the felloes, and requires no rivets.

RUSSELL's wheels are easily fixed to any old axle by a wood stock in the place of the metal stock. It should be observed that RUSSELL's Patent Axle is extremely simple, producing less friction, and requiring no removal of wheels in order to grease, from the power of self-supplying oil at the screw-hole (E). The wheels are in use under omnibuses, cabs, and all other carriages, and are giving complete satisfaction.

Orders received at the Factory, and licences granted to the trade. Some of the foreign patent rights are still to be disposed of. Applications to be made at the Factory, London, or through RUSSELL & Co.'s agent, W. UNDERWOOD, 18 Rue du Mail, Paris, and 42 Rue Zerezo, Brussels.

Les rayons ne sont pas emmortaisés dans les moyeux, mais sont aboutés les uns aux autres (comme en A), formant une arcade en bois qui empêche le retrait, le déplacement et le bruit, de sorte que chaque concussion se distribue également dans l'arcade entière, et que chaque rayon supporte sa propre part de travail.

Les moyeux en métal (voir essieu, D et F) étant construits en deux parties peuvent d'enlever pour examiner la condition des rayons de l'arcade, et un tour de plus des écrous (G) maintiendra les rayons solides et secs. La bande creuse (H) offre aussi de grands avantages. Il est de toute impossibilité qu'elle parte, elle protège les côtés des jantes, et ne requiert pas de rivets.

Les roues fabriquées par RUSSELL se fixent facilement à tout vieil essieu au moyen d'un moyeu en bois au lieu du moyeu en métal. On fera aussi observer que l'essieu breveté de RUSSELL est extrêmement simple, produit un frottement moins considérable, et ne demande pas l'enlèvement des roues pour être graissé, par suite de sa propriété de s'alimenter de lui-même d'huile au trou de vis (E). Les roues de RUSSELL sont en usage pour les omnibus, fiacres, et tous autres véhicules, et donnent la satisfaction la plus complète.

Commandes reçues à la Manufacture, et licences accordées au commerce. Quelques-uns des droits de brevet étranger peuvent encore être cédés. S'adresser à la Manufacture, à Londres, ou à l'agent de RUSSELL ET CIE., W. UNDERWOOD, 18 Rue du Mail, Paris, et 42 Rue Zerezo, Bruxelles.

SWAINE & ADENEY, 185 Piccadilly, London, w., opposite Burlington House.

By Appointment to the Queen and the Royal Family.

Manufacturers of Whips of all Descriptions, Thongs, Canes, and Sporting Apparatus.
Fabricants de Fouets en toutes formes, Montures de Fouets, Canes et Articles de Sport.
 Fabricanten von Peitschen aller Art, Peitschenschnüren, Rohrstöcken und Jagdgeräthen.

Prize Medals awarded at the International Exhibitions, London, 1851 and 1862, and Dublin, 1865.

Prize racing whips, richly mounted in silver and silver gilt, the mounts illustrative of the universal and pacific character of the Exhibition, and also of equestrian sports.

A gentleman's riding whip, of superior workmanship, mounted in gold, set with precious stones.

Ladies' riding whips, with fan or sun shade attached, of novel construction, also with parasol.

Ladies' and gentlemen's improved patent Arab or 'Chowrie' riding whips, with horse-hair plumes.

Ladies' driving whips, with parasols attached, elegantly mounted.

A general assortment of ladies' and gentlemen's riding, hunting, and driving whips of new patterns and extraordinary finish.

Riding and walking canes, with beautiful and novel mountings.

Agents in Paris—M. E. DARRÉ, 5 Rue du Faubourg St. Honoré; Messrs. CHAS. LAVY & Co., 7 Rue du Mail.

Cravaches pour prix de courses, avec garnitures riches en argent et en doré; sujets appropriés au caractère pacifique et universel de l'Exposition, ainsi qu'aux exercices équestres.

Une cravache de cavalier, d'un travail supérieur, garniture incrustée de pierres précieuses.

Cravaches de dames, portant éventail ou ombrelle, modèle nouveau.

Cravaches arabes, pour dames ou cavaliers, dites 'Chowrie,' brevetées, perfectionnées, avec chasse mouches en crin.

Fouets d'attelage pour dames, munis d'une ombrelle, avec monture élégante.

Assortiment de fouets d'attelage, fouets de chasse, cravaches pour dames et cavaliers, de modèles nouveaux, et d'un fini extraordinaire.

Canes et sticks, avec un beau choix de garnitures des plus riches et des plus nouvelles.

Preis-Wettrennpeitschen, prachtvoll in Silber und vergoldetes Silber gefasst; die Fassungen stellen den allgemeinen und friedlichen Charakter der Ausstellung und ebenso Gegenstände der Reitkunst dar.

Eine Herren-Reitpeitsche von ausgezeichnete Arbeit, in Gold gefasst und mit Edelsteinen besetzt.

Reitpeitschen für Damen, mit Fächer oder Sonnenschirm versehen, von neuer Construction.

Verbesserte Arabische oder 'Chowrie'-Reitpeitschen mit Pferdehaarbusch, für Herren und Damen.

Fahrpeitschen für Damen, mit Sonnenschirm versehen, geschmackvoll gefasst.

Eine allgemeine Auswahl von Reit-, Jagd- und Fahrpeitschen in neuen Mustern und von ausserordentlicher Arbeit, für Herren und Damen.

Reit- und Spazierrohrstöcke, mit schönen und neuen Fassungen.

CLASS LXIII.

'ECONOMIC' PERMANENT WAY COMPANY, 19 Great George-street, Westminster, s.w.

Griffin's Patent Iron Sleepers (never before exhibited).

Traverses en fer, brevetées, de Griffin (n'ont jamais été exposées avant).

Griffin's Patent sleepers are adapted for all forms of rails, and are laid down on the principal lines in England, India, Egypt, South America, Spain, Brazil, Belgium, and many other countries. 30,000 tons are now being manufactured; and they were chosen by the most eminent engineers and contractors, including Mr. Brassey, Messrs. Peto et Betts, Mr. Johnson, Sir Charles Fox, Mr. Woods, Mr. Trevithick, Mr. Russell Shaw, &c. &c., as superior to all others.

'Seaton's' patent saddle rail and iron sleepers have been extensively used on the Great Western and other railways, and have received the highest approval of the engineers.

The Barrow Hematite steel rails, now being extensively adopted.

Ces traverses sont adaptées à toutes les formes de rails, et ont été posées sur les principales lignes ferrées d'Angleterre, de l'Inde, d'Égypte, de l'Amérique du Sud, de l'Espagne, du Brésil, de la Belgique, et de beaucoup d'autres pays. Il s'en fabrique maintenant 30,000 tonnes; et les plus éminents ingénieurs et entrepreneurs, tels que M. Brassey, MM. Peto et Betts, M. Johnson, Sir Charles Fox, M. Woods, M. Trevithick, M. Russell Shaw, etc. etc., ont choisi ces traverses comme étant supérieures à toutes autres.

Le rail et les traverses en fer, brevetés, de Seaton ont été largement employés sur le chemin de fer du Great Western et autres lignes, et ont reçu l'approbation la plus haute des ingénieurs.

Rails en acier d'hématite de Barrow, d'un usage maintenant très-répandu.

OWEN'S PATENT WHEEL TIRE & AXLE COMPANY (LIMITED).

(Late WILLIAM OWEN.)

Phoenix Iron Works, Rotherham, Yorkshire, England.

Manufacturers of Arbel's patent stamped, solid wrought-iron engine, tender, carriage, and wagon wheels.

Crucible and Bessemer cast-steel tires and axles.

Solid weldless tires of best Yorkshire quality.

Patent crescent railway axles.

Railway and marine engineers' wrought and cast ironwork.

Wrought-iron forgings and smiths' work of every description.

London Offices—9 Victoria-chambers, Westminster.

Fabricanten von Arbel's patentirten gestempelten soliden schmiedeeisernen Maschinen-, Tender-, Wagen- und Güterwagen-Rädern;

Radschienen und Achsen von Gussstahl;

Soliden Radschienen ohne Schweissung von bester Yorkshire-Qualität;

Patentirten Halbmond-Eisenbahn-Achsen;

Eisenbahn- und Schiffingenieur-Eisenwerk von Schmiedeeisen und Gusseisen;

Geschmiedetem Eisenwerk und Schmiedearbeit jeder Art.

Londoner Comptoir: 9 Victoria-chambers, Westminster.

Fabricants de roues pour locomotives, tenders, voitures et waggons, en fer massif bocardé et forgé par le procédé d'Arbel, breveté.

Bandes de roues et essieux en acier fondu.

Bandes de roues massives, sans soudure, de la meilleure qualité du Yorkshire.

Essieux encreissant pour chemins de fer, brevetés.

Tous ouvrages en fer forgé et en fonte pour chemins de fer et la marine.

Fers forgés et ouvrages de forgeron de toute espèce.

Bureaux à Londres: 9 Victoria-chambers, Westminster.

Fabbricanti delle ruote patentate di Arbel di ferro battuto solido a stampo, per locomotiva, tender, carrozze, e vagoni.

Cerchioni e sale di acciaio fuso.

Cerchioni solidi senza saldatura a caldo della miglior qualità del Yorkshire.

Sale da ferrovia arcuate patentate.

Lavori in ferro fuso a battuto per ingegneri ferroviari e navali.

Lavori di funica e di fabbro in ferro battuto di ogni genere.

Ufficio in Londra, 9 Victoria-chambers, Westminster.

DERING, GEORGE E. (*Inventor and Patentee*), *Lockleys, Welwyn, Hertfordshire, England.*

Improved Permanent Way of Railways.

Voies Permanentes de Chemins de Fer perfectionnées.

Received, at International Exhibition, 1862, the only Jurors' Award given for Improvements of Permanent Way, and also the Prize Medal in Dublin Exhibition, 1865.

1. Spring Clip Fish-Joints, of tempered steel; affording the advantage of increased strength and smoothness at the joint, by reason of the powerful and uniform pressure of the spring clip. Any wear or loosening that may at any time occur is immediately repaired by the inherent *tendency of the spring clip to collapse*. Safety, simplicity, and economy are likewise insured by the absence of bolts, nuts, &c., and of the necessity for constant attention and labour which they entail—one single piece of metal taking the place of the ten or fourteen separate parts which constitute the ordinary 'fish-joint.' The spring clip, in combination with the spring key described below, or with a key of wrought iron, forms a superior joint, and one very quickly made and taken to pieces.

The figures show the adaptation of the spring clip to rails of the double-headed and bridge sections, and it is applicable to other forms with equal advantage.

2. Spring Keys, of tempered steel; the most important advantages of which consist in the firmness with which they hold the rails, and that whilst possessing every qualification of the wooden key, without its defects, they are calculated to last at least ten times as long. The spring key never becomes loosened by vibration, owing to its unfailing *tendency to expand*, and is totally unaffected by hygrometric changes. It may be used either with intermediate or joint chairs; and forms, with the latter, a rail joint equal to the ordinary 'fish,' at less than one-half the cost.

3. Spring Trenails, of tempered steel; which possess like advantages with the spring keys, in point of efficiency and durability, over both wooden trenails and iron spikes. Owing to its permanent *tendency to expand*, the spring trenail cannot be loosened by vibration, although extracted readily, and without injury, when needful. It is not affected by weather, and cannot be broken by the tangential strain exerted at curves, or otherwise.

Prices on application.

A reçu à l'Exposition Internationale de 1862 le seul Certificat Honoraire décerné par le Jury pour Perfectionnements apportés dans le Maintien des Voies de Chemins de Fer, et aussi la Médaille à l'Exposition de Dublin, 1865.

1. Joints à goujons à pince à ressort, d'acier trempé; offrant les avantages d'accroissement de force et de liant aux joints, en raison de la puissante et uniforme pression de la pince à ressort. Toute usure ou relâchement qui peuvent se produire à un moment quelconque se trouvent immédiatement réparés par la *tendance inhérente à la pince à ressort de s'affaisser*. L'absence de boulons, écroux, etc., assure également la sûreté, la simplicité, et l'économie de ce système, et dispense de la nécessité d'une constante surveillance—une seule pièce de métal prenant la place des dix ou quatorze pièces séparées qui constitue le joint à goujons ordinaire. La pince à ressort, combinée avec la clavette à ressort décrite ci-dessous, compose un joint de qualité supérieure, et qui peut se monter et se démonter rapidement.

Les figures montrent l'adaptation de la pince à ressort aux rails des sections à tête double et à pont, et s'applique avec le même avantage à d'autres formes.

2. Clavettes à Ressort d'acier trempé; leurs avantages les plus importants consistent en la fermeté avec laquelle elles maintiennent le rail, et dans le mérite de durer dix fois au moins aussi longtemps que la clavette en bois, dont elles possèdent toutes les propriétés sans avoir aucun de ses défauts. La clavette à ressort ne vient jamais à branler par suite de la vibration, grâce à son infaillible *tendance à expansion*, et n'est nullement affectée par les changements hygrométriques. Elle peut être employée indifféremment avec coussinets intermédiaires ou coussinets de jonction, et constitue, avec ces derniers, un joint de rail égal au joint à goujons ordinaire, à moins de moitié de dépense.

3. Chevilles à ressort, d'acier trempé; possédant les mêmes avantages que les clavettes à ressort, quant à la durabilité et à l'efficacité, sur les chevilles en bois et les fiches en fer. Par suite de sa *tendance permanente à expansion*, la cheville à ressort ne peut se mettre à branler par la vibration, bien que s'étant facilement, et sans dommage, alors qu'il est nécessaire. Elle n'est point non plus affectée par les variations atmosphériques, et ne peut être brisée par l'effort de tangente exercé aux courbes, ou autrement.

Prix sur demande.

POOLEY, HENRY, & SON, *Liverpool.*

Manufacturers of Weighing Machinery.

Constructeurs de Machines à Peser.

Fabricanten von Wiege-Maschinerie.

1. A Railway Weighbridge, of novel construction, possessing the following advantages:—

- (1.) The smallest possible depth of pit, and cheapest masonry;
- (2.) Dispenses with all horizontal levers underground, and uses vertical levers, or cams built into the walls, and undamageable;
- (3.) Any number of supporting points may be used, so as to sustain the heaviest loads that can be moved on road or rail;
- (4.) Relieving apparatus rendered superfluous;
- (5.) Friction reduced to a minimum; the weighing platform floats, within certain limits, in every lateral direction;
- (6.) All repairs are effected without disturbing the road, or interrupting traffic.

2. Our ordinary Weighbridge, for rail and road vehicles, so well known in Great Britain, is displayed in drawings.

The new Steelyard is applicable to all classes

1. Un Pont à Basculer pour chemin de fer, de construction nouvelle, possédant les avantages suivants:—

- (1.) La moindre profondeur possible de puit, et la maçonnerie la plus économique;
- (2.) Dispense de tous leviers horizontaux souterrains, et fait usage de leviers verticaux, ou cames, fixés dans les murs, et ne pouvant ainsi point s'endommager;
- (3.) On peut se servir de tout nombre quelconque de points de support, de façon à supporter les charges les plus lourdes qui se puissent transporter sur route ordinaire ou chemin de fer;
- (4.) L'appareil de soulagement rendu superflu;
- (5.) Le frottement réduit à un minimum; la plate-forme à peser flottant, dans de certaines limites, dans toute direction latérale quelconque;

Railway Weighbridge.

of our machines, and is a prominent feature. It is kept in adjustment by a concealed screw, by which we alter the proportions of the instrument, and obviate the awkward method of frequently adding to or taking from the counterweight. The poise is a body sliding upon the steelyard, graduated to show the larger denominations of weights, whilst a cylinder revolved on the poise indicates fractions.

3. The Platform Weighing Machine exhibited is of the smaller kind, but the machines as generally made by us for railway traffic and heavy trades are shown in drawings. Their simplicity, with economy and unrivalled convenience, have induced their general adoption.

4. The Automatic Grain Scale is exhibited in motion. It is entirely self-acting; the sole momentum employed in the several acts of loading, weighing, discharging, and recording, is the weight of the commodity in process of being weighed. The results of any period of work are exhibited with unerring precision upon the register.

(6.) Toutes réparations s'effectuent sans déranger la route et sans interrompre la circulation.

2. Notre Pont à Basculer ordinaire, pour véhicules de route ordinaire et de chemin de fer, est exposé en dessins.

La nouvelle Romaine s'applique à toutes les classes de nos machines, dont elle est un trait proéminent. Elle se maintient ajustée au moyen d'une vis dissimulée, par l'emploi de laquelle nous modifions les proportions de l'instrument, et obviens à la gauche méthode d'ajouter fréquemment au contre-poids ou d'en retrancher. Le pesson consiste en un corps glissant sur la romaine, graduée de façon à montrer les dénominations les plus élevées de poids, tandis qu'un cylindre roulant sur le pesson indique les fractions.

3. La Basculer à Plate-forme, exposée, est du modèle le plus petit, mais celles construites par nous pour le trafic des chemins de fer, et des industries à marchandises lourdes, sont

exposées en dessins. Leur simplicité, jointe à leur bon marché et à leur commodité sans rivale, les a fait adopter généralement.

4. La Balance à Grain, Automate, est exposée fonctionnant. Elle est entièrement *self-acting*; le seul poids agissant dans les diverses phases de son action, le chargement, le pesage, le déchargement et l'enregistrement, étant celui de la denrée en train d'être pesée. Les résultats, à toute période quelconque du travail, sont indiqués par le compteur avec une précision infallible.

1. Eine Eisenbahn-Wagebrücke, von neuer Construction, welche die folgenden Vortheile besitzt:—

2. Unsere gewöhnliche Wagebrücke, für Eisenbahn- und andere Wagen, so wohl in Grossbritannien bekannt, ist durch Zeichnungen erläutert.

Der neue Wagebalken ist auf alle Klassen unserer Maschinen anwendbar und ist eine hervorstechende Eigenthümlichkeit derselben. Er wird durch eine verborgene Schraube in Ordnung gebracht, durch welche wir die Verhältnisse des Instruments ändern, und durch welche wir die umständliche Methode, häufig von dem Gegengewichte zu nehmen oder hinzuzufügen, vermeiden. Die Wage ist ein Körper, welcher auf dem Wagebalken hin- und hergleitet, so abgetheilt, dass er die grösseren Gewichtsbezeichnungen angiebt, während ein

Automatic Grain Scale—*Balance à Grain Automate*—Automatische Kornwage.

- (1.) Die geringste Tiefe der Grube, welche möglich ist, und das billigste Mauerwerk;
- (2.) Alle horizontalen unterirdischen Wagebalken sind unnöthig geworden, und man braucht anstatt verticale oder in die Mauer gebaute und unverwüsthliche Kammräder;
- (3.) Man kann eine beliebige Anzahl von Stützpunkten anwenden, so dass die schwersten Lasten, welche in Strassen oder auf Eisenbahnen bewegt werden können, darauf ruhen können;
- (4.) Der erleichternde Apparat ist überflüssig geworden;
- (5.) Reibung ist bis auf das geringste Mass reducirt; die Wiege-Plattform bewegt sich, innerhalb gewisser Grenzen, nach allen Seiten;
- (6.) Alle Reparaturen können ausgeführt werden, ohne den Weg abzusperren oder den Verkehr zu unterbrechen.

auf der Wage sich umdrehender Cylinder Bruchtheile anzeigt.

3. Die ausgestellte Plattform-Wagemaschine ist von einer kleineren Art, aber dienvon uns allgemein für Eisenbahnverkehr oder schwere Lastenbeförderung gebauten Maschinen sind durch Zeichnung dargestellt. Ihre Einfachheit, nebst Ersparniss und unvergleichlicher Bequemlichkeit, hat ihr allgemeinen Gebrauch erworben.

4. Die automatische Kornwage ist in Thätigkeit ausgestellt. Sie ist vollkommen selbstbewegend; der einzige angewandte Bewegungstrieb in den verschiedenen Verrichtungen des Füllens, Wiegens, Entleerens und Anmerkens ist das Gewicht der zu wiegenden Waare. Die Resultate irgend einer Arbeitsdauer werden mit unfehlbarer Genauigkeit auf dem Register dargestellt.

SAXBY & FARMER'S PATENT RAILWAY SIGNALS.

Copy of Recommendation by Captain Tyler, Royal Engineers, Government Inspector of Railways.

‘Board of Trade, s.w.

‘The system of Messrs. SAXBY & FARMER, for preventing accidents on railways, at junctions and other places, by interlocking points and signals, has of late years been extensively adopted on English railways, and has been productive of greatly increased security, particularly at complicated junctions and stations. The Charing Cross Railway, the London Bridge Station, the Stewart's-lane Junction of the London, Chatham, and Dover with the Brighton Railway, &c. &c. may be cited as examples.

‘I have had occasion to report officially frequently, and very favourably, of the system, and to recommend its adoption and extension on English, as I do confidently on French, railways.

(Signed)

‘H. W. TYLER,
Captain, Royal Engineers.’

Copie de Recommandation émanant du Capitaine Tyler, du Corps des Ingénieurs Royaux, Inspecteur Gouvernemental des Chemins de Fer.

‘Ministère du Commerce, s.w.

‘Le système de MM. SAXBY et FARMER, tendant à prévenir les accidents sur les chemins de fer, aux points de jonction et autres, par des aiguilles et signaux s'entrefermant, a été largement adopté dans ces dernières années sur les chemins de fer anglais, et a considérablement accru la sécurité, particulièrement aux stations et points des jonctions les plus compliquées. On peut citer, pour exemples, le Chemin de fer de Charing Cross, la station de London Bridge, l'Embranchement, à Stewart's-lane, du chemin de Londres, Chatham et Douvres avec celui de Brighton, etc. etc.

‘J'ai eu l'occasion de faire de fréquents et favorables rapports officiels sur ce système, et de recommander son adoption et son application plus étendue sur les chemins de fer d'Angleterre, ainsi que je le fais avec confiance pour ceux de France.

(Signé)

‘H. W. TYLER,
Capitaine au Corps des Ingénieurs Royaux.’

Abschrift der Empfehlung von Capitain Tyler, in dem Königlichen Ingenieur-Corps, Regierungs-Eisenbahn-Inspector.

‘Handelsministerium, s.w.

‘Das System der Herren SAXBY & FARMER, für die Verhütung von Unglücksfällen auf Eisenbahnen, an Verbindungs-Stationen und andern Plätzen, durch abschliessende Punkte und Signale, ist während der letzten Jahre sehr ausgebreitet auf Englischen Eisenbahnen eingeführt worden und hat viel grössere Sicherheit, namentlich auf verwickelten Zweigstationen und Bahnhöfen, hervorgebracht. Die Charing-Cross-Eisenbahn, der London-Bridge-Bahnhof, die Stewart's-Lane-Verbindungs-Station der London-, Chatham- und Dover- mit der Brighton-Eisenbahn u. s. w. u. s. w. können als Beispiele angeführt werden.

‘Ich habe Gelegenheit gehabt, sehr häufig, und sehr günstig, über das System amtlich zu berichten, und seine Anwendung und Verbreitung auf Englischen Eisenbahnen zu empfehlen, was ich auch für Französische Eisenbahnen thun kann.

(Gezeichnet) ‘H. W. TYLER,

‘Capitain in dem Königlichen Ingenieur-Corps.’

Copia di Commendatizia del Capitano Tyler, del R. Genio Militare, Ispettore Governativo delle Ferrovie.

‘Ministero del Commercio, s.w.

‘Il sistema dei Signori SAXBY e FARMER, per impedire le disgrazie nelle ferrovie alle deviazioni ed altri luoghi, per mezzo di punti e segnali coincidenti, è stato negli anni recenti estesamente adottato nelle ferrovie inglesi, ed è stato causa di sicurezza grandemente aumentata, particolarmente alle stazioni e deviazioni complicate. Come esempi, si possono citare la Linea di Charing Cross, la Stazione di London Bridge, la Deviazione di Stewart's-lane della Linea London, Chatham e Dover dalla Ferrovia di Brighton, ecc. ecc.

‘Ho avute frequenti occasioni di far rapporti ufficiali, e favorevolissimi di questo sistema e di raccomandarne l'adozione e l'estensione nelle ferrovie inglesi, cioèchè faccio anche con piena fiducia pelle francesi.

(F.)

‘H. W. TYLER,
‘Capitano del R. Genio Militare.’

STEPHENSON, ROBERT, & CO., Newcastle-upon-Tyne.

London Office—CHARLES MANBY, F.R.S., 24 Great George-street, Westminster.

Engineers, Machinists, and Iron and Brass Founders; Manufacturers of Locomotive, Marine, and Stationary Engines; Contractors for Iron Vessels, Bridges, Girders, &c. &c. &c.

Ingénieurs, Constructeurs de Machines, et Fondateurs en Fer et en Cuivre; Constructeurs de Locomotives, Machines à Vapeur Fixes, et pour Navires; Entrepreneurs de Construction de Navires, Ponts, Longrines, etc. etc. etc., en Fer.

Express Passenger Engine, No. 2,012—Locomotive pour Trains Express de Voyageurs, No. 2,012.

Exhibited by the gracious permission of His Highness the Viceroy of Egypt, as a specimen of the engines employed on the Egyptian Government railways.

Cylinders 16 inches diameter and 22 inches stroke; leading and trailing wheels 3 feet 9 inches diameter; driving wheels 6 feet 6 inches diameter. Boiler constructed of thick-edged plates, butt-jointed and double rivetted; adapted for working under a pressure of 160 pounds per square inch. This engine is of the type of the majority of the rolling stock on the Egyptian Government railways for which it is intended.

The engine works at Newcastle-on Tyne were founded in the year 1823, by GEORGE STEPHENSON, the railway engineer, and his son, ROBERT STEPHENSON, whose engine 'The Rocket,' one of the earliest machines of that class constructed at the factory, gained the prize in the celebrated competition of locomotive engines before the opening of the Liverpool and Manchester Railway.

ROBERT STEPHENSON greatly extended the works, and carried them on until his decease in 1859. They have since been conducted by his cousin and successor, GEORGE ROBERT STEPHENSON, who had for many years previously taken an active part in the management. Under his direction they have been much extended, so that the capability of production of machinery of all kinds is greater than at any former period.

Exposée avec la gracieuse permission de Son Altesse le Viceroy d'Égypte, comme spécimen des machines en usage sur les chemins de fer du Gouvernement Egyptien.

Cylindres de 16 pouces—40,64 c.—de diamètre et de 22 pouces—55,88 c.—de course; roues dirigeantes et de support de 3 pieds 9 pouces—1,14 m.—de diamètre; roues motrices de 6 pieds 6 pouces de diamètre—1,98 m. Chaudière construite en tôles à arêtes épaisses, jointes bout à bout et à doubles rivets; faite pour fonctionner sous une pression de 160 livres—72 kilogr. 640 gr.—par pouce carré—6,45 c. carrés. Cette machine est le type de la plus grande partie du matériel roulant des chemins de fer du Gouvernement Egyptien auxquels elle est destinée.

Les usines à construire des machines à vapeur, à Newcastle-on-Tyne, furent fondées dans l'année 1823 par GEORGE STEPHENSON, l'ingénieur de chemins de fer, et son fils, ROBERT STEPHENSON, dont la machine 'The Rocket'—La Fusée—une des premières de cette classe construites à la fabrique, remporta le prix dans le célèbre concours de machines locomotives qui précéda l'ouverture du chemin de fer de Liverpool à Manchester.

ROBERT STEPHENSON augmenta considérablement ces usines, et demeura à leur tête jusqu'à sa mort en 1859. Elles ont depuis été dirigées par son cousin et successeur, GEORGE ROBERT STEPHENSON, qui durant nombre d'années antérieures avait pris une part active à leur exploitation. Sous sa direction, elles ont pris une si vaste extension que leur capacité de production de machines de toutes espèces est plus grande qu'à aucune période précédente.

SPENCER, JOHN, & SONS, *Newburn Steel Works, Newcastle-on-Tyne.**London Office—124 Fenchurch-street.*

Manufacturers of every description of steel and files; cast-steel rings for hooping ordnance, cast and hammered in the ring.

Laminated bearing and buffing springs for locomotive engines, railway carriages, and waggons. Spiral springs.

Baillie's patent volute springs.

Spencer's patent improved volute springs.

Patent volute spring buffers with cast and wrought iron cases for locomotive engines, railway carriages, and waggons.

Manufacture toutes espèces d'acier et de limes; cercles en acier fondu pour relier les pièces d'artillerie, fondus et forgés dans le cercle.

Ressorts de support et de tampons, laminés, pour locomotives, voitures de chemins de fer et wagons. Ressorts en spirale.

Ressorts en volute de Baillie, brevetés.

Ressorts en volute perfectionnés de Spencer, brevetés.

Tampons à ressorts en volute, brevetés, avec boîtes en fonte et fer forgé, pour locomotives, voitures de chemins de fer, et wagons.

Fabricanten von jeder Art von Stahl und Feilen; Ringen für Geschützreifen von Gussstahl, gegossen und gehämmert im Ring;

Platten-Trag- und Stossfedern für Locomotiven, Eisenbahnwagen und Güterwagen Spiralfedern;

Baillie's volutirte Patent-Sprungfedern;

Spencer's volutirte Patent-Sprungfedern, mit neueren Vervollkommnungen.

Patentirten Schneckenfeder-Buffern, mit guss- und schmiedeeisernen Büchsen für Locomotiven, Eisenbahnwagen und Güterwagen.

Fabbrica di ogni specie di acciaio e lime, cerchi d'acciaio fuso per cerchiare artiglieria fusi e battuti nel cerchio.

Molle laminate di sostegno e per ziffi di locomotive, carrozze e vagoni ferroviari. Molle spirali.

Molle a volute patentate di Baillie.

Molle a volute perfezionate di Spencer patentate.

Ziffi con molle a volute patentati con cassa in ferro fuso e battuto per locomotive, carrozze, e vagoni ferroviari.

CLASS LXV.

ENAMELLED CEILINGS.

SUGGESTED BY HENRY COLE, C.B.

These ceilings were invented to answer the requirements of the South Kensington Museum, where much gaslight is used, and where the greatest precautions against fire are necessary. Instead of using wooden laths between the iron girders of the floor, and making the floor of concrete and the ceiling of plaster, the ena-

melled ceiling supports the concrete and supercedes the plastering. These ceilings may be made either of pottery or of iron, enamelled. They are much more easily cleaned and are more fireproof than the old mode, and admit of any amount of decoration that may be required.

MODEL OF THE CENTRAL HALL OF ARTS AND SCIENCES.

To be erected on the estate of Her Majesty's Commissioners for the Exhibition of 1851, at Kensington.

The design for the building is by Lieut.-Col. Scott, R.E., assisted by Mr. G. Townroe, artist. It is based on ideas originated by the late Capt. Fowke, R.E.

The plan of the building is elliptical in form. The main walls are of brick, the exterior of red brick with terra cotta enrichments, chiefly of a buff tint. The roof is of wrought iron covered with lead, with a central skylight. The floors, stairs, and all partitions are fire-proof.

Access to and egress from different parts of the building are provided for by numerous separate entrances and staircases.

Immediately over the upper tier of boxes is a corridor 20 feet wide which can be used either for the exhibition of pictures, sculpture, or other

objects, or it can be seated for an audience. An upper corridor, also 20 feet wide, and top lighted can be similarly used.

The boxes are each provided with a separate room to which access is gained from corridors 9 feet in width.

Below the boxes is a spacious amphitheatre: and an area 103 feet long, and 68 feet wide, measured on the axes of the ellipse, occupies the centre of the building. Small lecture and concert rooms, refreshment and retiring rooms, and offices for societies using the hall, are contained between the outer wall and that of the hall itself. The cost of the building is estimated at 200,000*l.* Views are annexed.

The hall is to be erected under the direction of a provisional committee, of which His Royal Highness the Prince of Wales is chairman;

and its management is invested in a governing body acting under the authority of a Royal Charter. It will be used for the following objects:—

Congresses, both national and international, for purposes of science and art. Performances of music, both choral and instrumental, including performances on the organ similar to those

now given in various large provincial towns, such as Liverpool and Birmingham. The distribution of prizes by public bodies and societies. Conversazioni of societies established for the promotion of science and art.

Agricultural and horticultural exhibitions. National and international exhibitions of works of art and industry, including industrial Exhibitions by the working classes similar to those recently held successfully in various parts

of London. Exhibitions of pictures, sculpture, and other objects of artistic or scientific interest, or any other purposes connected with science and art.

The site for the hall is granted by Her Majesty's Commissioners for the Exhibition of

1851, and the necessary funds for erecting it are being raised by the sale of seats. The seats which are not sold will be at the disposal of the governing body, and the revenue arising from letting them will be applied to the maintenance of the hall, and to defraying the

expense of carrying into effect the objects for which the hall is erected. Of the 6,000 sittings which it will contain it is proposed to sell 2,000. The portion of the hall set apart for the orchestra contains seats for 1,000 performers, not included

in the above estimate, and these seats will be also available for the public when the orchestra is not required.

The model was made by Messrs. Jackson & Sons, of Rathbone-place, Oxford-street.

ARCHITECTURAL MUSEUM, SOUTH KENSINGTON, LONDON.

JENNINGS'S LIFT-UP LAVATORIES,

As arranged for Retiring-Rooms, Hotels, Clubs, Railway Stations, and other Public Buildings.

GEORGE JENNINGS respectfully invites attention to his hydraulic, sanitary, building, and domestic appliances in Class 65, Civil Engineering and Public Works, where may be seen many articles tending to comfort and health.

He also begs to state that his manufactures having been selected by the Royal Commissioners for the Retiring Rooms of the British Section of the Exhibition, they may be there inspected, and their value estimated.

GEORGE JENNINGS, *Sanitary Engineer, Palace Wharf, Stangate, London, s.*

Paris Agents—FORTIN HERMANN FRÈRES, 98 Boulevard du Mont Parnasse.

GEORGE JENNINGS a l'honneur d'appeler l'attention sur ses appareils hydrauliques, de salubrité, pour édifices, et domestiques, exposés dans la Classe 65, Génie Civil et Travaux Publics, où se peuvent voir de nombreux articles tendant au confort et à la santé.

Il a aussi l'honneur d'ajouter que ses produits ont été choisis par les Commissaires Royaux pour les Cabinets privés de la Section Anglaise de l'Exposition, où ils peuvent être examinés, et appréciés à leur valeur.

GEORGE JENNINGS, *Ingénieur Sanitaire, Palace Wharf, Stangate, London, s.*

Agents à Paris—FORTIN HERMANN FRÈRES, 98 Boulevard du Mont Parnasse.

GEORGE JENNINGS erlaubt sich, die Aufmerksamkeit des Publicums auf seine hydraulischen, Gesundheits-, Bau- und Hauswirthschaftsvorrichtungen, in Klasse 65, Civilingenieurkunst und öffentliche Bauten, ausgestellt, wo viele zur Gesundheit und Bequemlichkeit dienende Artikel in Augenschein genommen werden können, zu lenken.

Er erlaubt sich gleichfalls, anzuzeigen, dass, da seine Erzeugnisse von der königlichen Commission für die Retraits der Britischen Abtheilung der Ausstellung ausgewählt worden sind, man dieselben dort in Augenschein nehmen und ihren Werth selbst schätzen kann.

GEORGE JENNINGS, *Gesundheits-Ingenieur, Palace Wharf, Stangate, London, s.*

Pariser Agenten—FORTIN HERMANN FRÈRES, 98 Boulevard du Mont Parnasse.

GEORGE JENNINGS invita rispettosamente l'attenzione del pubblico ai suoi apparati idraulici, sanitari, per edifizii, e domestici, alla Classe 65, Genio Civile e Lavori Pubblici, ove sono esposti vari oggetti interessanti il conforto e l'igiene.

Desidera inoltre fore avvertire che gli oggetti di sua fabbricazione essendo stati scelti della Commissione Reale per i Camerini della Sezione Britannica dell'Esposizione, potranno esser ivi ispezionati e giustamente apprezzati.

GEORGE JENNINGS, *Ingegnere Sanitario, Palace Wharf, Stangate, London, s.*

Agenti in Parigi—FORTIN HERMANN FRÈRES, 98 Boulevard du Mont Parnasse.

MEMORIAL OF THE PRINCE CONSORT IN HYDE PARK.

THIS MEMORIAL OF THE LATE PRINCE CONSORT, DESIGNED BY G. G. SCOTT, R.A., IS NOW IN COURSE OF ERECTION IN HYDE-PARK, CLOSE TO THE SPOT ON WHICH THE GREAT EXHIBITION BUILDING OF 1851 FORMERLY STOOD.

The ground plan of the Memorial is square. A broadly stretching flight of steps, having at each angle a group of statues emblematical of the Four Quarters of the Earth, supplies a platform for the whole. Thence rises a second flight, on the summit of which stands the *podium* of the monument itself, the angles of which are advanced diagonally to form bases for a second series of statues suggestive of the Arts of Peace.

The pedestal will be decorated with bas-reliefs illustrating the Fine Arts; those relating to architecture and sculpture, by J. B. Philip, and those referring to poetry, music, and painting by H. H. Armstead.

The lower groups of statues have been entrusted to four sculptors, P. Mac Dowell, R.A., who has undertaken 'Europe'; J. H. Foley, R.A., who will design 'Asia'; W. Theed, 'Africa'; and J. Bell, 'America.'

The upper groups have been placed in the hands of W. C. Marshall, R.A., whose group will represent 'Agriculture'; J. Lawlor, who undertakes 'Engineering'; H. Weekes, R.A., 'Manufactures'; and T. Thorneroyroft, 'Navigation.'

The statue of the Prince Consort, which will be seated, and in the robes of the Garter, by Baron Marochetti, A.R.A., will be placed upon a pedestal in the centre, beneath a rich canopy of Gothic design.

The following granite, marble, &c. are used in the construction of this Memorial:—

IRISH GRANITE.—This granite comes from Castlwellan. It is used for pedestals at angles of steps: steps for central pedestal; bases to

columns, and small caps. Small columns 20 ft. long, in two stones. The number of steps required for construction of the work is 1,152, each 7 ft. 6 in. long.

The bases under the columns, all worked and polished by hand, are each 17 tons weight in the rough, 12 tons when finished.

SCOTCH GRANITE.—This granite is obtained from the 'Ross of Mull,' the Duke of Argyll's estate. It is used for base to podium; sub-plinth under bases to main piers (20 tons, in two stones); large columns (20 ft. long, in two stones); bed moulds of the upper cornice; small columns in the pinnacles. All this granite is of a rich red colour.

CORRENIE GRANITE.—This is obtained from Capt. Gordon's estate, forty miles beyond Aberdeen. It is used for base and capping to central pedestals. This granite is rich, and the hardest that is used.

MARBLE FOR THE PODIUM.—This is the hard Sicilian obtained from the Paleri Quarry, Carrara, belonging to Mr. Fabbriotti. The figures round the podium are all carved out of this marble.

PORTLAND STONE.—This is obtained from the Isle of Portland, all of the very best description from the Maggot Quarry, of a rich cream colour.

CONCRETE.—The concrete in the centre portion 60 ft. square, 17 ft. deep, is composed of gravel, sand, and blue lias lime. It is as hard as rock.

A 'traveller' is employed which will lift 30 tons weight, and a timber scaffold is erected by means of which 10 tons weight can be lifted 90 feet high.

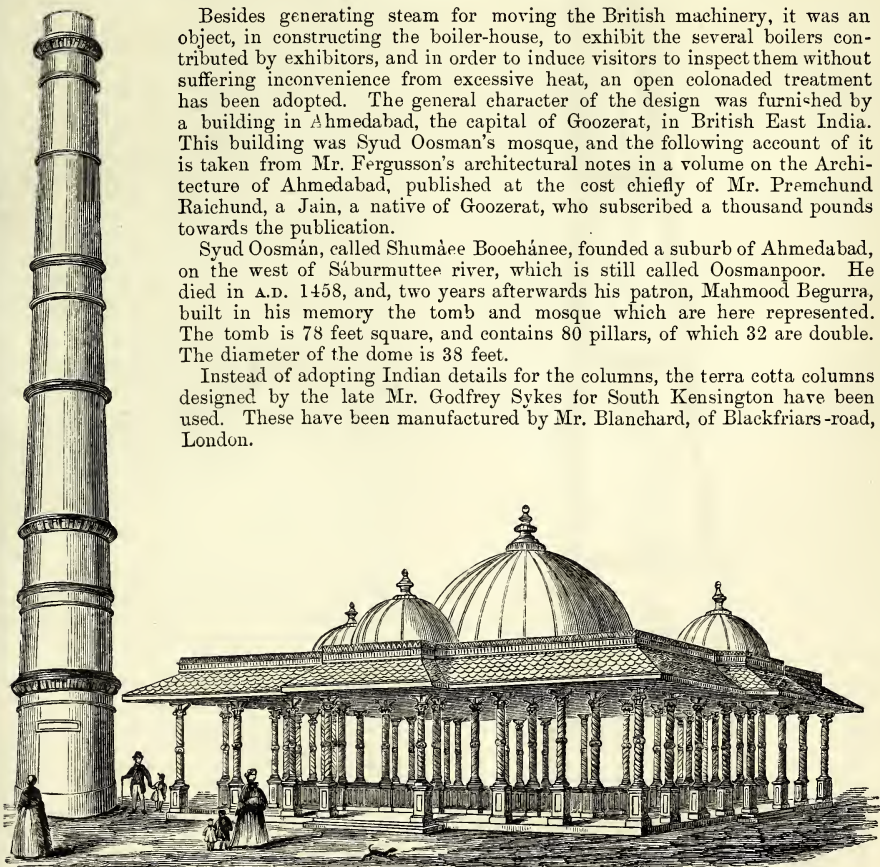

OPEN ORNAMENTAL BOILER-HOUSE AND CHIMNEY-SHAFT

ERECTED BY THE BRITISH EXECUTIVE IN TERRA COTTA AND BRICKWORK, ACCORDING TO A DESIGN SUGGESTED BY THE MOSQUE OF SYUD OOSMAN AT AHMEDABAD, ABOUT 1458 A.D.

Besides generating steam for moving the British machinery, it was an object, in constructing the boiler-house, to exhibit the several boilers contributed by exhibitors, and in order to induce visitors to inspect them without suffering inconvenience from excessive heat, an open colonaded treatment has been adopted. The general character of the design was furnished by a building in Ahmedabad, the capital of Goozerat, in British East India. This building was Syud Oosman's mosque, and the following account of it is taken from Mr. Fergusson's architectural notes in a volume on the Architecture of Ahmedabad, published at the cost chiefly of Mr. Premchund Raichund, a Jain, a native of Goozerat, who subscribed a thousand pounds towards the publication.

Syud Oosmán, called Shumáee Boeohánee, founded a suburb of Ahmedabad, on the west of Sábúrmútee river, which is still called Oosmanpoor. He died in A.D. 1458, and, two years afterwards his patron, Mahmood Begurra, built in his memory the tomb and mosque which are here represented. The tomb is 78 feet square, and contains 80 pillars, of which 32 are double. The diameter of the dome is 38 feet.

Instead of adopting Indian details for the columns, the terra cotta columns designed by the late Mr. Godfrey Sykes for South Kensington have been used. These have been manufactured by Mr. Blanchard, of Blackfriars-road, London.

SISSONS & WHITE, *Hull, England.*

Patent Steam Pile Driver.

Sissons & White's Steam Pile Driver.

The height of the machine in the annexed drawing is 40 ft. and will pitch a pile 34 ft. long on ground the same level as that on which the machine stands; this height is found to be sufficient for general use, but machines of greater height are made to order.

By a different arrangement in the upright framing, piles can be driven in a tide-way down to a depth of 30ft. below the stage on which the machinery stands, the ram driving quite down to the ground without using a 'dolly,' to dispense with which is a great advantage.

It requires four men to work it, and consumes about 4 cwt. of coal or gas coke in ten hours.

It will be perceived from the annexed engraving that the bottom framing is in two heights—the upper part revolving turntable fashion on the lower one. The machine can thus be faced round to any of the four sides.

The travelling wheels are castors, so that by lifting up each side with a lever the castors can be turned to run on a tramway at any angle.

It is moved by fastening the end of a rope ahead, passing it over a roller under the winch, and taking a turn round the barrel, and is moved with great facility.

The ram usually falls about 12 times in a minute with a 5 ft. lift, and is lifted by means of an eccentric fixed in an opening made in the centre of it, and is made to revolve by a lever, to the outer end of which a cord is attached, and, on being drawn downwards, a bolt is shot out into the open link of the pitched chain in its upward motion. The bolt is withdrawn by the other end of the lever striking against a staple fixed in the front of the guide pieces, and the ram thus released then falls on the pile.

The pile is quickly pitched by attaching a common chain to the pile head.

The total weight of the driver and boiler is 6 tons, including the ram and mountings, which are 20 cwt. The bottom framing of the driver is 7 ft. 6 in. square. Its comparative lightness, and the small space it occupies, make it capable of being worked in any position or circumstances in which a common hand machine can be put, either on land or afloat.

Upwards of seventy of these Drivers have been sold to contractors and others, among which are Mr. Ritson, Mr. Furniss, and Mr. Webster, at the Thames Embankment, Mr. Brassey, London, and Mr. Girard, of Paris, all eminent contractors.

Agent for France—MR. EDWARD COPE, 12, Rue de Strasbourg, Paris

FIRST DIVISION.

WORKS GENERALLY EXECUTED FROM PRE-
SCRIBED DESIGNS.*

- *5. CARVING IN STONE.—Flowers in Caen stone, by W. H. Holmes, 101 Dean-street, Soho, w. Price 5*l.*—(*Prize of 5*l.**)
- *14A. CARVING AND GILDING.—A Mirror Frame, designed and carved by W. M. Holmes, principal part of the flowers by Mouatt (deceased), gilt in double mat and burnished by Messrs. Buchholtz, Venning, Chowne, sen., Ettershank, Connor, and Allen; exhibited by J. H. Wyatt, 101 Dean-street, w. Price 230*l.*—(*Prize of 10*l.**)
15. REPOUSSÉ WORK IN METAL.—Executed in iron, after the Martelli bronze mirror case at South Kensington, by G. Page, 39 Duglas-street, Northampton-road, Clerkenwell, E.C. Price 20*l.*—(1st *Prize of 10*l.**; also, North London Exhibition *Prize*.†)
20. Ditto, Raphael's 'Three Graces,' in copper, by Alexander Dufour, 36 Cleveland-street, Fitzroy-square, w. Price 11*l.*—(*Prize of 4*l.**)
26. HAMMERED WORK IN BRASS, by Albert Edward Millward, 13 New Compton-street, Soho, w.—(*Prize of 6*l.**)
28. HAMMERED WORK IN IRON.—A Bracket, by George Hobbs, 4 Marlboro' Mews, Blenheim-street, w. Price 5*l.* 10*s.*—(*Prize of 2*l.**)
- 30A. Ditto, Panel for a screen, by W. Letheren, Lansdown Iron Works, Cheltenham. Price 20*l.*—(*Prize of 10*l.**)
36. CHASING IN BRONZE.—Bust of 'Clytie,' by T. Nichols, 4 Everilda-street, Hemingford-road, Islington, n. Price 15*l.*—(*Prize of 6*l.**)
39. Ditto, Ornament, after *Goutier*, by H. J. Hatfield, 16 Alfred-street, Tottenham-court-road, w.c. Price 15*l.*—(*Prize of 4*l.**)
- *42. Ditto, Statuette of 'Caractacus,' by H. Hatfield, sen., 46 Bolsover-street, n.w. Produced for the Art Union of London.—(*Prize of 5*l.**)
43. ENGRAVING ON METAL, after arabesques, by G. S. B. Price 3*l.* 10*s.*—(*Prize of 2*l.**)
44. Ditto, by G. Berry, 31 Brewer-street, Golden-square, w. Price 4*l.* 4*s.*—(*Prize of 5*l.**)
- *51. ENAMEL PAINTING ON COPPER.—'Boy and Doves,' after *Raphael*, by Walter J. W. Nunn, 10 Gardour-street, Bromehead-street, Commercial-road, E. Price 5*l.*—(*Prize of 3*l.**)
57. PAINTING ON PORCELAIN.—'Two Children,' by William H. Slater, Oak-hill-cottages, Stoke-upon-Trent. Price 5*l.* 10*s.*—(*Prize of 2*l.**)
- *60. Ditto, plateau in blue, after design by *Maestro Ludovico*, by Alexander Fisher, 5 Clyde-street, Stoke-upon-Trent.—(*Prize of 3*l.**)

* Those marked with an asterisk (*) are not after the prescribed designs.

† This prize consists of the interest of 167*l.* 7*s.* 3*d.* Consols, invested in the name of the Society of Arts, to be awarded by the Council 'for the best specimen of skilled workmanship' at the Society's Exhibition.

*74. BOOKBINDING.—Early Florentine style, 'Histoire de la Porcelaine,' by Louis Genth, 30 Brydges-street, Covent-garden, w.c. Price 25*l.*—(Prize of 5*l.*)

*76. Ditto, Bookcase, specimen of Mosaic, by the above, 10*l.* 10*s.*—(Prize of 3*l.*)

77. ILLUMINATIONS.—Specimen by Charles Pfander, 28 Bayham-street, Camden-Town, n.w. Price 5*l.* 10*s.*—(Prize of 4*l.*)

SECOND DIVISION.

WORKS EXECUTED WITHOUT PRESCRIBED DESIGNS.

WOOD CARVING.—(a.) *Human figure in the round, in alto or in bas relief. Animals or natural foliage may be used as accessories.*

81. 'Autumn,' Female Head in satin wood, by

G. F. Bridge, 3 Vincent-square, s.w. Price 5*l.* 10*s.*—(Prize of 5*l.*)

83a. Panel, in Ebony, 'Boy and Moth,' by R. Flipping, 67 Charrington-street, Oakley-square, n.w.—(Prize of 3*l.*)

(b.) *Animal or still life. Fruit, flowers, or natural foliage may be used as accessories.*

85. Panel. 'Bird and Flowers,' by E. Dujardin, 46 Camberwell-grove, s. Price 10*l.*—(Prize of 2*l.*)

(c.) *Natural foliage, fruit, or flowers, or conventional ornament, in which grotesque figures or animals may form accessories, preference being given where the work is of an applied character for ordinary decorative purposes, as representing commercial value.*

86. Panel in Lime Wood, by J. S. Booth, 19 Malden-road, Kentish-town, n.w. Price 10*l.* 10*s.*—(Prize of 4*l.*)

SOUTH KENSINGTON MUSEUM.

HINGE FOR SWING DOORS,

INVENTED BY THE LATE CAPT. FOWKE, R.E., FOR USE IN THE SOUTH KENSINGTON MUSEUM.

The principle of this hinge is that the door is carried on a friction-roller working on a cam so arranged that as the door is opened it rises; the weight of the door thus always tends to keep it shut without the use of any spring.

This system of hinge has this great advantage—that the cam is so adjusted that the greatest force is required at commencing to open the door (the resistance decreases as the door opens), so that a draught of air will not open it.

CLASS LXVI.

THE ADMIRALTY, WHITEHALL, LONDON.

DETAILED LIST OF THE ARTICLES EXHIBITED.

1. Marine engines.
2. Half-block models, illustrating the forms of the various classes of steam ships of the Royal Navy since the introduction of the screw.
3. Models of systems of construction of iron-cased ships.
4. Models of the general fittings of men-of-war, including condensing and cooking apparatus, &c.
5. Specimens of such of the articles of food in use in H. M. Navy as are manufactured in the Government victualling yards.
6. Specimens of boats in use in H. M. Navy.
7. Naval munitions of war.
8. Naval flags.
9. Charts and books.

1. MARINE ENGINES.

A model of the engines of 1,350 horse-power, in H. M. ships *Minotaur* and *Northumberland*, by John Penn and Son.

A pair of marine engines of the collective power of 350 horses, on the expansive principle, with surface condensers, for H. M. ship *Sappho*, by Messrs. John Penn and Son, Greenwich.

A launch engine and boiler, complete, by J. Penn and Son.

Engines of the twin-screw steam launch (No. 38), also the carriage for transporting them, as supplied to ships of the royal navy. These engines consist of two pairs of high pressure engines of 6 horse-power collectively by Messrs. Maudsley, Sons, & Field. Length of the launch 42 ft., breadth 11 ft. 6 in.; draught of water (light), 1 ft. 10 in. forward, 3 ft. aft; speed 7·5 knots. Number of cylinders 4, diameter of cylinders 5 in., length of stroke 6 in., average number of strokes on trial 360, indicated horse-power 39. Diameter of the screw-propellers 2 ft. 6 in., pitch 3 ft. 2 in. The boiler is constructed of Low Moor iron, and was proved by water pressure to 180 lbs. per square inch. Number of tubes 31, length of tubes 3 ft. 11 in., diameter of tubes 2 in. Area of the fire grate 4·7 square feet, total area of the heating surface 80 square feet. The launch, to which these engines belong is exhibited with the other boats.

2. SERIES OF HALF BLOCK MODELS, ILLUSTRATING THE FORMS OF THE VARIOUS CLASSES OF STEAM SHIPS OF THE ROYAL NAVY SINCE THE INTRODUCTION OF THE SCREW.

N.B.—In the following particulars the length given is the length between the perpendiculars,

the breadth is the breadth extreme, the tonnage is builders' measurement (old rule); the armament stated against the ships is that which was ordered for them about the time of their being launched, but in many cases it has been frequently altered since.

When a ship has been tried fully rigged and equipped for sea, the corresponding speed and draught of water is that which has been stated; in the case of those ships which have not been so tried, the correct speed and draught of water has been given as far as practicable.

The half-block models are all on the scale of a quarter of an inch to the foot.

SHIPS OF THREE DECKS.

The *Duke of Wellington*, 131 guns, 700 horse-power, length 240 ft. 7 in., breadth 60 ft. 1 in., draught 25 ft. 9 in. forward, 25 ft. 9 in. aft, tonnage 3,771, speed 9·891 knots. Laid down in Pembroke Yard, in 1849, as a sailing vessel, but converted to a screw ship while on the stocks; launched in 1852. The original design for a sailing vessel, and the subsequent alteration of it for a screw propeller, were by the Surveyor's Department. The *Prince of Wales* was built as a sailing ship on the same lines, but when lengthened for the screw propeller was given an additional 12 ft. amidships. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck.	{ 10	8 in.	65	9 0
	{ 26	32 prs.	56	9 6
Middle „	{ 30	32 „	56	9 6
	{ 6	8 in.	65	9 0
Main „	{ 38	32 prs.	42	8 0
	{ 20	32 „	25	6 0
Upper „	{ 1	68 pivot	95	10 0
Total .	131			

The complement of men was 1,100. The model and the above dimensions represent the ship as she was actually built.

The *Marlborough*, 131 guns, 800 horse-power, length 245 ft. 6 in., breadth 61 ft. 2½ in., draught 25 ft. 4 in. forward, 27 ft. 3 in. aft, tonnage 4,000, speed 11·233 knots. Laid down at Portsmouth Yard, September 1, 1850, as a sailing vessel, conversion to a screw ship commenced November 29, 1852, launched as such July 31, 1855. The original design for a sailing vessel, and the subsequent alteration of it for the screw propeller, were by the Surveyor's Department. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	{ 10	8 in.	65	9 0
	{ 26	32 prs.	56	9 6
Middle „ .	{ 6	8 in.	65	9 0
	{ 30	32 prs.	56	9 6
Main „ .	{ 38	32 „	42	8 0
	{ 20	32 „	25	6 0
Upper „ .	{ 1	68 pivot	95	10 0
Total .	131			

The complement of men was 1,100. The model and the above dimensions represent the ship as she was actually built.

The *Victoria*, 121 guns, 1,000 horse-power, length 260 ft. 2 in., breadth 60 ft. 1 in., draught 24 ft. 7 in. forward, 27 ft. 10 in. aft, tonnage 4,127, speed 12·271 knots. Laid down at Portsmouth Yard, April 1, 1856; launched November 12, 1859. Designed by the Surveyor's Department. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	32	8 in.	65	9 0
Middle „ .	30	8 „	65	9 0
Main „ .	32	32 prs.	56	9 6
Upper „ .	{ 26	32 „	42	8 0
	{ 1	68 pivot	95	10 0
Total .	121			

The complement of men was 1,130.

SHIPS OF TWO DECKS.

The *Sans Pareil*, 80 guns, 400 horse-power, length 200 ft., breadth 52 ft. 3 in., draught 22 ft. 8 in. forward, 25 ft. 7½ in. aft, tonnage 2,339, speed 9·3 knots. Laid down at Devonport Yard, in September, 1845, as a sailing ship, conversion to a screw ship commenced in January, 1849; launched as such in March, 1851. Designed by Sir William Symonds as a sailing ship, and adapted for the screw propeller by the Surveyor's Department. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	30	32	56	9 6
Main „ .	30	8 in.	52	8 0
Upper „ .	{ 18	32 prs.	25	6 0
	{ 2	32 „	56	9 6
Total .	80			

The complement of men was 700. The model and the above dimensions represent the ship as she was actually built.

The *Agamemnon*, 80 guns, 600 horse-power, length 230 ft., breadth 55 ft. 6 in., draught 23 ft. 1 in. forward, 23 ft. 8 in. aft, tonnage 3,074, speed 11·243 knots. Laid down at Woolwich Yard, in November, 1849; launched May 22, 1852. Designed by Mr. J. Edye, when acting surveyor of the navy, in 1847. There were also built on the same lines, the *James Watt*, at Pembroke, in 1853, the *Victor Emmanuel*, at Pembroke, in 1855, the *Edgar*, at Woolwich, in 1858; and also on the same lines, but lengthened 5 ft. at the bow, the *Hero*, at Chatham, in 1858. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	36	8 in.	65	9 0
Main „ .	34	32 prs.	56	9 6
Upper „ .	{ 2	8 in.	95	10 0
	{ 8	10 „	85	9 4
Total .	80			

The complement of men was 820. This was the first screw line-of-battle ship designed for the British Navy.

In 1857 and 1858 she was employed in laying down the first Atlantic Telegraph Cable.

The *St. Jean d'Acre*, 101 guns, 600 horse-power, length 238 ft., breadth 55 ft. 4 in., draught 23 ft. 6 in. forward, 25 ft. aft, tonnage 3,199, speed 11·199 knots (ship light). Laid down at Devonport Yard, in June, 1851; launched March, 1853. Designed by Surveyor's Department. There were also built on the same lines, but lengthened 2 ft. at the bow, the *Conqueror*, at Devonport, in 1855, and the *Donegal*, at Devonport, in 1858. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	{ 20	8 in.	65	9 0
	{ 16	32 prs.	56	9 6
Main „ .	{ 28	32 „	56	9 6
	{ 8	8 in.	65	9 0
Upper „ .	{ 8	32 prs.	42	8 0
	{ 21	68 pivot	95	10 0
Total .	101			

The complement of men was 900.

The *Colossus*, 80 guns, 400 horse-power, length 190 ft., breadth 57 ft., draught 23 ft.,

2 in. forward, 25 ft. 7 in. aft, tonnage 2,590, speed 9.312 knots. Laid down at Pembroke Yard, October, 1843, as a sailing ship, and launched as such, June, 1848. Converted for the screw propeller, at Portsmouth, in 1854, without any alteration in her form, as were also the following ships, which were built on the same lines, viz. the *Majestic*, at Chatham, in 1853; the *Brunswick*, at Pembroke, in 1855; the *Centurion*, at Devonport, in 1856; the *Mars*, at Chatham, in 1856; the *Goliath*, at Chatham, in 1858; the *Meeanee*, at Sheerness, in 1858; the *Irresistible*, at Chatham, in 1859; the *Lion*, at Devonport, in 1859; the *Collingwood*, at Sheerness, in 1861. Designed for a sailing ship by Sir William Symonds, and adapted for the screw propeller by the Surveyor's Department. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	{ 10	8 in.	65	9 0
	{ 18	32 prs.	56	9 6
Main " .	{ 4	8 in.	65	9 0
	{ 24	32 prs.	50	9 0
Upper " .	{ 24	32 "	42	8 0
Total .	80			

The complement of men was 750.

The *Hannibal*, 91 guns, 450 horse-power, length 217 ft. 6 in., breadth 58 ft. 1 $\frac{5}{8}$ in., draught 20 ft. 6 in. forward, 20 ft. 7 in. aft, tonnage 3,136, speed 8.6 knots. Laid down at Deptford Yard as a sailing ship in December, 1848, commenced conversion to a screw ship in October, 1852, and launched in January, 1854. Designed by Mr. J. Edye. There was also built on the same lines, and converted for the screw propeller in a similar manner, the *Princess Royal*, at Portsmouth, in 1852. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	{ 20	8 in.	65	9 0
	{ 12	32 prs.	56	9 6
Main " .	{ 8	8 in.	65	9 0
	{ 26	32 prs.	56	9 6
Upper " .	{ 24	32 "	42	8 0
	{ 1	68 pivot	95	10 0
Total .	91			

The complement of men was 850. The model and the above dimensions represent the ship as she was actually built.

The *Orion*, 91 guns, 600 horse-power, length 238 ft., breadth 55 ft. 9 in., draught 24 ft. 5 in. forward, 26 ft. 10 in. aft, speed 11.446 knots, tonnage 3,281. Laid down at Chatham Yard, in February, 1850, as a sailing ship, commenced conversion to a screw ship in December, 1852, and launched November 6, 1854. Designed by Surveyor's Department. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	34	8 in.	65	9 0
Main " .	34	32 prs.	56	9 6
Upper " .	{ 22	32 "	42	8 6
	{ 1	68 pivot	95	10 0
Total .	91			

The complement of men was 850. The model and the above dimensions represent the ship as she was actually built.

The *Renown*, 91 guns, 800 horse-power, length 244 ft. 10 in., breadth 55 ft. 4 in., draught 23 ft. 4 in. forward, 25 ft. 2 in. aft, speed 11.815 knots, tonnage 3,319. Laid down at Chatham Yard, in December, 1854; launched March 28, 1857. Designed by Surveyor's Department, on the *Agamemnon*'s lines lengthened amidships to receive 800 horse-power engines. There were also built on the same lines the *Anson*, at Woolwich, in 1860; the *Atlas*, at Chatham, in 1860; and the *Revenge*, at Pembroke, in 1859. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	34	8 in.	65	9 0
Main " .	34	32 prs.	56	9 6
Upper " .	{ 22	32 "	45	8 6
	{ 1	68 pivot	95	10 0
Total .	91			

The complement of men was 860.

The *Neptune*, 90 guns, 500 horse-power, length 216 ft. 6 in., breadth 55 ft. 5 in., draught 23 ft. 6 in. forward, 26 ft. 5 in. aft, tonnage 2,830, speed 10.897 knots. Laid down at Portsmouth Yard, in January, 1827, as a sailing ship; launched as such in September, 1832; converted for the screw propeller in 1859. Designed by Sir William Rule as a sailing ship, and adapted for the screw by the Surveyor's Department. There were also built on the same lines, and converted for the screw propeller in a similar manner, the *St. George*, at Devonport, in 1859; the *Trafalgar*, at Chatham, in 1859; the *Conqueror*, at Sheerness, in 1859; and the *Royal William*, at Devonport, in 1860. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	32	8 in.	65	9 0
Main " .	34	32 prs.	56	9 6
Upper " .	{ 22	32 "	42	8 0
	{ 2	68 "	95	10 0
Total .	90			

The complement of men was 860.

The *Rodney*, 90 guns, 500 horse-power, length 214 ft. 4 in., breadth 54 ft., draught 18 ft. 9 in. forward, 21 ft. 6 in. aft, tonnage 2,770, speed 11·479 knots (ship light). Laid down at Pembroke Yard, in July, 1827, as a sailing ship; launched as such in June, 1833; converted for the screw propeller in 1859. Designed by Sir Robert Seppings as a sailing ship, and adapted for the screw propeller by the Surveyor's Department. There were also built on the same lines as sailing ships, the *London*, and the *Nile*; the former was altered to a steam ship, at Devonport, in 1858, in the same manner; but the *Nile* was converted, at Devonport, in 1854, without being lengthened. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	32	8 in.	65	9 0
Main „ .	34	32 prs.	56	9 6
Upper „ .	{ 22 2	32 „ 68 „	42 95	8 0 10 0
Total .	90			

The complement of men was 840.

The *Queen*, 110 guns, length 204 ft. 2½ in., breadth 60 ft. ½ in., draught 24 ft. 4 in. forward, 25 ft. 6 in. aft, tonnage 3,104. Laid down in Portsmouth Yard in 1833, launched in 1839. Designed by Sir Wm. Symonds. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	{ 24 6	32 8 in.	56 65	9 6 9 0
Middle „ .	{ 26 4	32 prs. 8 in.	56 65	9 6 9 0

Total .	110			

The complement of men was 900. Her name was originally *Royal Frederick*, but it was changed to *Queen* in 1839. She was converted to a screw two-deck ship of 86 guns, at Sheerness, in 1859, and her dimensions, &c., altered to the following, viz. length 216 ft. 7½ in., breadth 60 ft. ¾ in., tonnage 3,249, draught 22 ft. forward, 23 ft. 7 in. aft, speed 10·578 knots; and armament—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	30	8 in.	65	9 0
Main „ .	32	32 prs.	56	9 6
Upper „ .	{ 22 2	32 „ 68 „	42 95	8 0 10 0
Total .	86			

The alteration of her lines for a steam ship was by the Surveyor's Department.

There was also built as a sailing ship, on the same lines, the *Frederick William*, and she was converted for the screw propeller in the same manner, at Portsmouth, in 1860.

The complement of men was 845. There are two models of this ship (A and B), A as a sailing ship, B as a steam ship.

The *Duncan*, 101 guns, 800 horse-power, length 252 ft. 1 in., breadth 58 ft. 1 in., draught 18 ft. 4 in. forward, 21 ft. 5 in. aft, speed 13·236 knots (ship light), tonnage 3,727. Laid down at Portsmouth Yard in May, 1857; launched December, 1859. Designed by the Surveyor's Department. There was also built on the same lines the *Gibraltar*, at Devonport, in 1860. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	38	8 in.	65	9 0
Main „ .	38	32 prs.	56	9 6

Total .	101			

The complement of men was 900.

The *Albion*, 90 guns, 400 horse-power, length 204 ft. 4 in., breadth 60 ft. 3 in., draught 18 ft. 9 in. forward, 21 ft. 6 in. aft, tonnage 3,111, speed 10·986 knots (ship light). Laid down at Devonport Yard, August 13, 1839, as a sailing vessel, and launched as such September 6, 1842. She was converted for the screw propeller at Devonport, in 1861, without any alteration in her form, as were also the following ships, which were built on the same lines, viz.: the *Erasmus*, at Devonport, in 1854, and the *Aboukir*, at Devonport, in 1858. Designed for a sailing ship by Sir William Symonds, and adapted for the screw propeller by the Controller's Department. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Lower deck .	32	8 in.	65	9 0
Main „ .	32	32 prs.	56	9 6
Upper „ .	26	32 „	42	8 0
Total .	90			

The complement of men was 820.

FRIGATES.

The *Arrogant*, 46 guns, 360 horse-power, length 200 ft., breadth 45 ft. 8¾ in., draught 18 ft. 7 in. forward, 20 ft. 3 in. aft, speed 8·935 knots, tonnage 1,872. Laid down at Portsmouth Yard in September, 1845; launched in April, 1848. Designed by Mr. Fincham. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Main deck .	{ 16	32 prs.	56	9 6
	{ 12	8 in.	65	9 0
Upper „ .	{ 16	32 prs.	32	6 6
	{ 2	68 „	95	10 0
Total .	46			

The complement of men was 450.

The *Dauntless*, 24 guns, 580 horse-power, length 219 ft. 6 in., breadth 39 ft. 9 in., draught 17 ft. forward, 18 ft. 7 in. aft, speed 9·903 knots, tonnage 1,575. Laid down at Portsmouth Yard, in September, 1845; launched in January, 1847. Designed by Mr. Fincham. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Main deck .	18	32	56	9 6
Upper „ .	{ 2	68 pivot	95	10 0
	{ 4	10 in.	85	9 4
Total .	24			

The complement of men was 250. She was originally constructed 9 ft. 6 in. shorter, but the model and the above dimensions and armament represent her as she was after being lengthened by the stern in 1850, at Portsmouth, an alteration which caused a very great improvement in her speed.

The *Imperieuse*, 51 guns, 360 horse-power, length 212 ft., breadth 50 ft. 0½ in., draught 21 ft. 2 in. forward, 22 ft. 3 in. aft, speed 9·849 knots, tonnage 2,358. Laid down at Deptford Yard, in November, 1850; launched in September, 1852. Designed by the Surveyor's Department. There were also built on the same lines, the *Chesapeake*, at Chatham, in 1855, the *Euryalus*, at Chatham, in 1853, and the *Forte*, at Deptford, in 1858. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Main deck .	{ 8	8 in.	65	9 0
	{ 22	32 prs.	56	9 6

The complement of men was 80.

The *Renard*, 8 guns, 60 horse-power, length 147 ft. 8 in., breadth 27 ft 9¾ in., draught 10 ft. 1½ in. forward, 11 ft. 8 in. aft, speed 7·3 knots. tonnage 516. Laid down at Deptford Yard in August 1847; launched in August 1848. Lost in 1851. Designed by Mr. John Edye. The armament was as follows:—

	No.	Pounders	Weight
	6	32	cwt. 25
	2	32 pivot	56
Total .	8		

The complement of men was 100.

The *Archer*, 14 guns, 202 horse-power, length 186 ft. 4½ in., breadth 33 ft. 10½ in., draught 14 ft. 7 in. forward, 14 ft. 10 in. aft, speed 8·242 knots, tonnage 973. Laid down at Deptford Yard in October 1847; launched in March 1849. Designed by Surveyor's Department. There was also built on the same lines, the *Wasp*, at Deptford, in 1850. The armament was as follows :—

	No.	Pounders	Weight	Length
	12	32	cwt. 42	ft. in. 6 6
	2	68 pivot	87	9 6
Total .	14			

The complement of men was 150.

The *Brisk*, 15 guns, 250 horse-power, length 190 ft. 7¼ in., breadth 35 ft. 2¼ in., draught 14 ft. 8 in. forward, 16 ft. 8 in. aft, speed 9·273 knots, tonnage 1,087. Laid down at Woolwich Yard in January 1849; launched in June 1851. Designed by the Committee of Reference. The armament was as follows :—

	No.	Pounders	Weight	Length
	14	32	cwt. 32	ft. in. 6 6
	1	68 pr. pivot	87	9 6
Total .	15			

The complement of men was 170.

The *Highflyer*, 21 guns, 250 horse-power, length 192 ft., breadth 36 ft. 5½ in., draught 15 ft. 9 in. forward, 18 ft. 10 in. aft, speed 9·410 knots, tonnage 1,161. Built by contract by Messrs. Mare and Co., at Blackwall. Laid down in January, 1850; launched in August, 1851. Designed by Surveyor's Department. There was also built on the same lines the *Esk*, at Millwall, in 1854. The armament was as follows :—

	No.	Pounders	Weight	Length
	20	8 in.	cwt. 52	ft. in. 8 0
	1	10 in. pivot	85	9 4
Total .	21			

The complement of men was 220.

The *Cruiser*, 17 guns, 60 horse-power, length 160 ft., breadth 31 ft. 10 in., draught 12 ft. 8 in. forward, 14 ft. 5 in. aft, speed 6·608 knots, tonnage 752. Laid down at Deptford

Yard in April, 1851; launched in June, 1852. Designed by Surveyor's Department. There was also built on the same lines the *Alert*, at Pembroke, in 1856; the *Falcon*, at Pembroke, in 1854; the *Harriet*, at Pembroke, in 1854; the *Hornet*, at Deptford, in 1854; the *Fawn*, at Deptford, in 1856. The armament was as follows :—

	No.	Pounders	Weight	Length
	16	32	cwt. 32	ft. in. 6 6
	1	32 pivot	56	9 6
Total .	17			

The complement of men was 160.

The *Malacca*, 17 guns, 200 horse-power, length 192 ft., breadth 34 ft. 4 in., draught 15 ft. 10 in. forward, 18 ft. aft, tonnage 1,034, speed 9·519 knots. Laid down at Moulmein in May, 1849; launched in April, 1853. Designed by Surveyor's Department. The armament was as follows :—

	No.	Pounders	Weight	Length
	16	32	cwt. 32	ft. in. 6 6
	1	10 in.	85	9 4
Total .	17			

The complement of men was 180.

The *Curlew*, 9 guns, 60 horse-power, length 139 ft., breadth 27 ft. 11 in., draught 12 ft. 2 in. forward, 13 ft. aft, speed 7·458 knots, tonnage 486. Laid down at Deptford Yard in October, 1852; launched in May, 1854. Taken to pieces by Messrs. Marshall, in November, 1865. Designed by Surveyor's Department. There were also built on the same lines the *Ariel*, at Pembroke, in 1854; the *Swallow*, at Pembroke, in 1854; and the *Lyra*, at Deptford, in 1857. The armament was as follows :—

	No.	Pounders	Weight	Length
	8	32	cwt. 25	ft. in. 5 4
	1	68 pivot	56	9 6
Total .	9			

The complement of men was 100.

The *Pylades*, 21 guns, 350 horse-power, length 192 ft. 9 in., breadth 38 ft. 5 in., draught 15 ft. 10 in. forward, 19 ft. 7 in. aft, speed 10·366 knots, tonnage 1,278. Laid down at Sheerness Yard in May, 1853; launched in November, 1854. Designed by Surveyor's Department. The armament was as follows :—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	20	8 in.	60	9 0
	1	68 pr. pivot	95	10 0
Total .	21			

The complement of men was 240.

The *Pearl*, 21 guns, 400 horse-power, length 200 ft., breadth 43 ft. 4 $\frac{3}{4}$ in., draught 16 ft. 2 in. forward, 19 ft. 9 in. aft, speed 11·313 knots, tonnage 1,469. Laid down at Woolwich Yard in January, 1854; launched in September, 1855. Designed by Surveyor's Department. There were also built on the same lines the *Cadmus*, at Chatham, in 1856; the *Satellite*, at Devonport, in 1855; the *Charybdis*, at Chatham, in 1859; the *Polorus*, at Devonport, in 1857; the *Scout*, at Woolwich, in 1856; the *Scylla*, at Sheerness, in 1856. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	20	8 in.	60	9 0
	1	68 pr. pivot	95	10 0
Total .	21			

The complement of men was 290.

The *Racoon*, 22 guns, 400 horse-power, length 200 ft. 1 in., breadth 40 ft. 4 in., draught 18 ft. 2 in. forward, 19 ft. 6 in. aft, tonnage 1,467, speed 10·092 knots. Laid down at Chatham Yard in April, 1856; launched in April, 1857. Designed by Surveyor's Department. There were also built on the same lines the *Challenger*, at Woolwich, in 1858, and the *Clio*, at Sheerness, in 1858. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	20	8 in.	60	8 10
	2	68 prs. pivots	95	10 0
Total .	22			

The complement of men was 280.

The *Gannet*, 11 guns, 150 horse-power, length 151 ft., breadth 29 ft. 1 $\frac{1}{2}$ in., draught 13 ft. 8 in. forward, 14 ft. 3 in. aft, tonnage 579, speed 9·928 knots. Laid down at Pembroke Yard in December, 1856; launched in December, 1857. Designed by Surveyor's Department. There were also built on the same lines the *Cordelia*, at Pembroke, in 1856; the *Racer*, at Deptford, in 1857; the *Icarus*, at Deptford, in 1858; the *Pantaloon*, at Devonport, in 1860. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	10	32	25	6 0
	1	32 pivot	58	9 6
Total .	11			

The complement of men was 120.

The *Greyhound*, 17 guns, 200 horse-power, length 172 ft. 6 in., breadth 33 ft. 2 $\frac{1}{2}$ in., draught 14 ft. forward, 15 ft. aft, tonnage 879, speed 9·177 knots. Laid down at Pembroke Yard in December, 1856; launched in June, 1859. Designed by Surveyor's Department. There was also built on the same lines the *Mutine*, at Deptford, in 1859. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	16	32	32	6 6
	1	32 pivot	58	9 6
Total .	17			

The complement of men was 165.

The *Rinaldo*, 17 guns, 200 horse-power, length 185 ft. 1 in., breadth 33 ft. 2 in., draught 13 ft. 8 in. forward, 15 ft. 7 in. aft, tonnage 951, speed 10·588 knots. Laid down at Portsmouth Yard in March, 1858; launched in March, 1860. Designed by Surveyor's Department. There was also built on the same lines the *Chameleon*, at Deptford, in 1860; the *Pelican*, at Pembroke, in 1860; the *Zebra*, at Deptford, in 1860; also about the same time the *Perseus*, *Rattler*, *Reindeer*, and *Chanticleer*. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	16	32	32	6 6
	1	32 pivot	58	9 6
Total .	17			

The complement of men was 170.

The *Rosario*, 11 guns, 150 horse-power, length 160 ft. 1 in., breadth 30 ft. 4 $\frac{1}{2}$ in., draught 12 ft. 8 in. forward, 13 ft. 10 in. aft, tonnage 673, speed 8·913 knots. Laid down at Deptford Yard in June, 1859; launched in October 1860. Designed by Surveyor's Department. There were also built on the same lines the *Peterel*, at Devonport, in 1860; the *Rapid*, at Deptford, in 1860; the *Royalist*, at Devonport, in 1861; the *Shearwater*, at Pembroke, in 1861; the *Columbine*, at Deptford, in 1862; the *Africa*, afterwards called *China*, at Devonport, in 1862. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	10	32	30	
	1	32 pivot	58	
Total .	11			

The complement of men was 130.

The *Wolverine*, 21 guns, 400 horse-power, length 225 ft., breadth 40 ft. 9 in., draught 17 ft. 11 in. forward, 20 ft. 4 in. aft, tonnage 1,703, speed 11·256 knots. Laid down at Woolwich Yard in April, 1859; launched in August, 1863. Designed by Surveyor's Department. There were also built on the same lines, the *Jason*, at Devonport, in 1859; the *Barrosa*, at Woolwich, in 1860; the *Orpheus*, at Chatham, in 1860; the *Orestes*, at Sheerness, in 1860; and the *Rattlesnake*, at Chatham, in 1861. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	16	8 in.	60	8 10
	4	{ 40 prs. Arm- strongs }	28	8 0

Total .	21			

The complement of men was 275.

The *Amazon*, 4 guns, 300 horse-power, length 187 ft., breadth 36 ft., draught 13 ft. 5½ in. forward, 16 ft. 5 in. aft, tonnage 1,081, speed 12·396 knots. Laid down at Pembroke Yard in July, 1864; launched in May, 1865. Sunk in the Channel, by collision with another ship, July 10, 1866. Designed by the Controller's Department. There were also built, or are building, on the same lines the *Vestal*, at Pembroke, in 1865; the *Niobe*, at Deptford, in 1866; the *Nymph*, building at Deptford; the *Dryad*, building at Devonport, and the *Daphne*, building at Pembroke. The armament was as follows:—

	No.	Pounders	Weight
			tons
	2	32 rifled	6
	2	64 prs.	
Total .	4		

The complement of men was 130.

The *Blanche*, 4 guns, 350 horse-power, length 212 ft., breadth 36 ft., draught 13 ft. 6 in. forward, 16 ft. 6 in. aft, tonnage 1,268, speed 13 knots (estimated). Laid down at Chatham Yard, in June, 1865. Designed by the Controller's Department. There are also building on the same lines the *Danaë*, at Portsmouth, and the *Sappho*, at Sheerness. The armament is to be two 6½-ton, and two 64-prs. The complement of men is to be 110.

The *Junco*, 6 guns, 400 horse-power, length 200 ft., breadth 40 ft. 4 in., draught 16 ft. 6 in. forward, 17 ft. 6 in. aft, tonnage 1,459, speed 10·75 knots (estimated). Laid down at Deptford Yard, in June, 1866. Designed by the Controller's Department. The armament is to be two 6½-ton revolving guns, and four 64-prs. The complement of men is to be 200.

GUN VESSELS.

The *Arrow*, 2 guns, 160 horse-power, length 160 ft., breadth 25 ft. 4 in., draught 10 ft. forward, 11 ft. 8 in. aft, tonnage 477, speed 11 knots. Built by contract by Messrs. Mare and Co., at Blackwall. Laid down in April, 1854; launched in June, 1854. Designed by Surveyor's Department. There were also built on the same lines, in the same year, the *Beagle*, *Snake*, and *Lynx*, by the same contractor; and the *Wrangler* and *Viper*, by Messrs. Green, at Blackwall. The armament was as follows:—

No.	Pounders	Weight	Length
		cwt.	ft. in.
2	68	95	10 0

The complement of men was 65.

The *Wanderer*, 4 guns, 200 horse-power, length 180 ft. 11 in., breadth 28 ft. 6 in. draught 9 ft. 7 in. forward, 11 ft. 5 in. aft, tonnage 675, speed 10·733 knots. Built by contract, at Blackwall, by Messrs. Green. Laid down in May, 1855; launched in November, 1855. Designed by Surveyor's Department. There were also built on the same lines, about the same time, the *Alacrity*, *Assurance*, *Coquette*, and nine others. The *Star* class was built on the same lines, but lengthened 5 ft. at the bow. The armament was as follows:—

No.	Pounders	Weight	Length
		cwt.	ft. in.
2	32	95	10 0
2	68 pivot	25	6 0
Total .	4		

The complement of men was 80.

The *Flying Fish*, 6 guns, 350 horse-power, length 200 ft., breadth 30 ft. 4½ in., draught 10 ft. 6 in. forward, 12 ft. 10 in. aft, tonnage 871, speed 11·832 knots. Laid down at Pembroke Yard, in June, 1855; launched in December, 1855. Designed by Surveyor's Department. There were also built on the same lines, the *Intrepid* and *Victor*, at Blackwall, by Messrs. Wigram, in 1855; the *Nimrod* and *Roebuck*, at Millwall, by Mr. Russell in 1856; and the *Pioneer*, at Pembroke, in 1856. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	2	68 pivot	95	10 0
	4	32	25	6 0
Total .	6			

The complement of men was 100.

The *Algerine*, 1 gun, 80 horse-power, length 125 ft. 10½ in., breadth 22 ft. 11½ in., draught 8 ft. 1 in. forward, 8 ft. 2 in. aft, tonnage 299, speed 9·3 knots. Built by contract by Mr. Pitcher, at Northfleet. Laid down in October, 1856; launched in February, 1857. Designed by Surveyor's Department. There were also built on the same lines, the *Jasper*, at Blackwall, by Messrs. Green, in 1857; the *Leven*, and *Slaney*, by Mr. Pitcher, at Northfleet, in 1857. The armament was one 10-in. pivot, 87 cwt., 9 ft. 6 in. The complement of men was 50.

The *Ranger*, 5 guns, 80 horse-power, length 145 ft., breadth 25 ft. 4½ in., draught 10 ft. 8 in. forward, 12 ft. aft, tonnage 427, speed 9·006 knots. Laid down at Deptford Yard, in November, 1857; launched in November, 1859. Designed by Surveyor's Department. There were also built on the same lines, about the same time, the *Cygnnet*, *Dart*, *Espoir*, and sixteen others. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	1	68 pivot	95	10 0
	4	24 howitzers		
Total .	5			

The complement of men was 60.

The *Star*, 4 guns, 200 horse-power, length 185 ft. 1½ in., breadth 28 ft. 4 in., draught 10 ft. 6 in. forward, 12 ft. aft, tonnage 695, speed 10·084 knots. Built by contract at Millwall by Messrs. C. Mare & Co. Laid down in June, 1859; launched in December, 1860. Designed by Surveyor's Department. There were also built on the same lines, about the same time, the *Cormorant*, *Eclipse*, *Lily*, and five others. These vessels are the same as the *Wanderer* class, except that they are lengthened 5 ft. at the bow. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
	2	68 pivot	95	10 0
	2	32 "	25	6 0
Total .	4			

The complement of men was 90.

The *Plover*, twin screw, 3 guns, 160 horse-power, length 170 ft., breadth 29 ft., draught 9 ft. forward, 9 ft. 6 in. aft., tonnage 663, speed 11 knots (estimated). Laid down at Deptford Yard, in November, 1865. Designed by the

Controller's Department. There are also building on the same lines, the *Lapwing*, at Devonport, the *Philomel*, at Deptford, and the *Ring-dove*, at Portsmouth. The armament is to be:—

	No.	Pounders	Weight
			tons
	1	100	6½
	2	40 Armstrongs	
Total .	3		

The complement of men is to be 80.

The *Waterwitch*, built of iron, 2 guns, 160 horse-power, length 162 ft., breadth 32 ft., draught 10 ft. 10 in. forward, 11 ft. 4 in. aft, tonnage 778, speed 9·255 knots. Built by contract on the Thames by the Thames Iron Ship-building Company. Laid down November, 1864; launched in June, 1866. Designed by Rear-Admiral Elliot and the Controller's Department; to be propelled on the hydraulic principle. The armament was two 6-ton rifled guns; the complement of men was 80.

GUN BOATS.

The *Albacore*, 2 guns, 60 horse-power, length 108 ft. 4 in., breadth 22 ft. 1 in., draught 6 ft., 10 in. forward, 6 ft. 6 in. aft, tonnage 235, speed 6·5 knots. Built by contract at West Cowes, by Messrs. J. and R. White. Laid down in October, 1855; launched in April, 1856. Designed by Surveyor's Department. There were also built on the same lines, about the same time, the *Amelia*, the *Banterer*, and 113 others. The armament was as follows:—

	No.	Pounders.	Weight	Length
			cwt.	ft. in.
	1	68	95	10 0
	1	32	56	9 6
Total .	2			

The complement of men was 36.

The *Clown*, 2 guns, 40 horse-power, length 110 ft. 2½ in., breadth 21 ft. 11 in., draught 5 ft. 11 in. forward, 6 ft. 5 in. aft, tonnage 238, speed 6·4 knots. Built by contract by Mr. W. C. Miller, at Liverpool. Laid down in January, 1856; launched in May, 1856. Designed by Surveyor's Department. There were also built on the same lines, the *Drake*, *Fenella*, and nine others. The armament was as follows:—

	No.	Pounders.	Weight	Length
			cwt.	ft. in.
	1	68 pivot	95	10 0
	1	32 "	56	9 6
Total .	2			

The complement of men was 36.

The *Angler*, 2 guns, 20 horse-power, length

100 ft., breadth 21 ft. 10 in., draught 5 ft. 6 in. forward, 5 ft. 6 in. aft, tonnage 212, speed 10·537 knots (ship light). Laid down at Devonport Yard, in December, 1855; launched in March, 1856. Designed by Surveyor's Department. There were also built on the same lines, the *Ant*, at Devonport, in 1856; the *Cheerful*, at Deptford, in 1855; and seventeen others. The armament was two 32-prs., 56 cwt., 9 ft. 6 in. The complement of men was 30.

The *Britomart*, 2 guns, 60 horse-power, length 120 ft. 1 in., breadth 22 ft. 1 in., draught 7 ft. 9 in. forward, 8 ft. 5 in. aft, tonnage 270, speed 7·9 knots. Built by contract by Messrs. J. and W. Smith, at Newcastle-on-Tyne. Laid down in November, 1859; launched in May, 1860. Designed by Surveyor's Department. There were also built on the same lines, about the same time, the *Cockatrice*, *Doterel*, *Heron*, and about ten others. The armament was as follows:—

	No.	Pounders	Weight	Length
	1	68 pivot	95	10 0
	1	32 "	56	9 6
Total .	2			

The complement of men was 40.

TUGS.

The *Turtle*, twin screw, iron tug, 20 horse-power, length 57 ft. 7 in., breadth 11 ft. 10½ in., draught 3 ft. 6 in. forward, 5 ft. 7 in. aft, tonnage 37, speed 9·2 knots (ship light). Built by contract by Messrs. J. and W. Dudgeon, at Millwall; launched in January, 1864. Designed by Messrs. J. and W. Dudgeon. There was also built on the same lines, the *African*, in 1865. The complement of men 7.

The *Trusty*, built of iron, 150 horse-power, length 129 ft. 11 in., breadth 23 ft. 1½ in., draught 10 ft. 6 in. forward, 10 ft. 6 in. aft, tonnage 329, speed 11·5 knots. Built by Messrs. Palmer, at Jarrow. Laid down October, 1865; launched in February, 1866. Designed by Messrs. Palmer, Jarrow. The *Camel* was built on the same lines, by Messrs. Palmer, in 1866.

PADDLE WHEEL DESPATCH VESSELS.

The *Salamis*, 1 gun, 250 horse-power, length 220 ft., breadth 28 ft. 2 in., draught 10 ft. 3 in. forward, 10 ft. 8 in. aft, tonnage 835, speed 13·3 knots. Laid down at Chatham Yard, in August, 1861; launched in May, 1863. Designed by Controller's Department. There were also built on the same lines, the *Enchantress* and *Pysche*, at Pembroke, in 1862. The armament was one 40-pr. Armstrong, 32 cwt., 10 ft. The complement of men was 65.

The *Helicon*, 1 gun, 250 horse-power, length 220 ft., breadth 28 ft. 2½ in., draught 9 ft. 11 in.

forward, 10 ft. 3 in. aft, tonnage 837, speed 14·5 knots. Laid down at Portsmouth Yard, in May, 1861; launched in January, 1865. Designed by Mr. Reed and Controller's Department. The armament was one 40-pr. Armstrong, 32 cwt., length 10 ft. The complement of men was 65.

YACHTS.

The *Black Eagle*, 1 gun, 260 horse-power, length 168 ft., breadth 26 ft. 5 in., draught 11 ft. 4 in. forward, 11 ft. 8 in. aft, tonnage 540, speed 11·1 knots. Built by contract by Messrs. Curling and Co., Limehouse. Laid down in April, 1831; launched in July, 1831. Designed by Mr. Oliver Lang, but lengthened 13 ft., at Deptford, in 1843. The model and above dimensions represent the ship as she was after being lengthened. The armament was one 18-pr., 38 cwt. The complement of men was 40. She was originally called the *Firebrand*, but in February, 1842, her name was changed to *Black Eagle*.

The *Osborne*, royal yacht, paddle-wheel, 430 horse-power, length 200 ft. 1 in., breadth 33 ft., draught 14 ft. 10 in. forward, 13 ft. 8 in. aft, tonnage 1,034, speed 10·7 knots. Laid down at Pembroke Yard, in 1842; launched in 1843. Designed by Sir William Symonds. Prior to December 22, 1854, this vessel was called the *Victoria and Albert*.

The *Fairy*, royal yacht, screw, 128 horse-power, length 144 ft. 8 in., breadth 21 ft. 1½ in., draught 4 ft. 11½ in. forward, 7 ft. 0½ in. aft, tonnage 312, speed 13·229 knots. Built at Blackwall Yard, by contract, by Messrs. Ditchburn and Mare; launched in 1845. Designed by Messrs. Ditchburn and Mare.

The *Elfin*, 40 horse-power, length 103 ft. 6 in., breadth 14 ft., draught 5 ft. 3 in. forward, 5 ft. aft, tonnage 98, speed 11·4 knots. Laid down at Chatham Yard, in August, 1848; launched in February, 1849. Designed by Mr. W. O. Lang.

The *Victoria and Albert*, royal yacht, paddle-wheel, 600 horse-power, length 300 ft., breadth 40 ft. 3¼ in., draught 13 ft. 10 in. forward, 14 ft. aft, tonnage 2,345, speed 16·8 knots (ship light). Laid down at Pembroke Yard, in 1854; launched in 1855. Designed by Surveyor's Department. For a short time, while building, this vessel was called the *Windsor Castle*.

The *Investigator*, 34 horse-power, length 120 ft. 10½ in., breadth 16 ft. 0½ in., draught 4 ft. 3 in. forward, 4 ft. 6 in. aft, tonnage 149, speed 9·1 knots. Laid down at Deptford Yard, in June, 1861; launched in November, 1861. Designed by Controller's Department.

The *Alberta*, royal yacht, 160 horse-power, length 160 ft., breadth 22 ft. 8 in., draught 7 ft. forward, 7 ft. aft, tonnage 391, speed 15·3 knots (ship light). Laid down at Pembroke Yard, in February, 1863; launched in October, 1863. Designed by Controller's Department.

TROOP SHIPS.

The *Simoom*, built of iron, 8 guns, 400 horse-power, length 246 ft., breadth 41 ft., draught 15 ft. 3 in. forward, 19 ft. 2 in. aft, tonnage 1,980, speed 10·647 knots. Built by contract by Mr. Napier, at Glasgow. Laid down in October, 1845; launched in May, 1849. Designed by Mr. Napier. The armament was as follows:—

	No.	Pounders	Weight
	6	32	cwt. 25
	2	32	56
Total	8		

The complement of men was 174.

The *Megara*, built of iron, 6 guns, 350 horse-power, length 207 ft., breadth 37 ft. 10 in., tonnage 1,395, draught 14 ft. 4 in. forward, 16 ft. 6 in. aft, speed 10·861 knots. Built by contract by Messrs. Fairbairn and Co., at Millwall. Laid down August, 1845; launched May, 1849. Designed by Mr. Fairbairn. The armament was six 32-prs., 25 cwt., 6 ft. The complement of men was 167.

The *Himalaya*, built of iron, 6 guns, 700 horse-power, length 340 ft. 5 in., breadth 46 ft. 1½ in., draught 18 ft. 10 in. forward, 21 ft. 3 in. aft, speed 12·805 knots, tonnage 3,453. Built by Messrs. Mare and Co., at Blackwall, in 1853, for the Peninsula and Oriental Company, from whom she was purchased in July, 1854. The armament was six 32-prs., 25 cwt., 6 ft. The complement of men was 213.

The *Resolute*, 2 guns, built of iron, 400 horse-power, length 282 ft. 10½ in., breadth 36 ft. 4½ in., draught 17 ft. 3 in. forward, 17 ft. 6 in. aft., tonnage 1,793, speed 11·447 knots. Built by Mr. Laird at Birkenhead. Purchased and launched in 1855. Designed by Mr. Laird. Her armament was two 18-pr. carronades. Her name was changed to *Adventure* in February, 1857. There was also built on the same lines, the *Assistance* at Birkenhead, in 1855.

The *Orontes*, built of iron, 2 guns, 500 horse-power, length 300 ft. 1 in., breadth 44 ft. 8 in., tonnage 2,823, draught 22 ft. forward, 22 ft. 6 in. aft, speed 10·88 knots. Built by contract by Messrs. Laird Brothers, at Birkenhead. Laid down July, 1861; launched November, 1862. Designed by Controller's Department. There was also built on the same lines, the *Tamar*, at Millwall, by Messrs. Samuda, in 1862. The armament was two 40-pr. Armstrong's, 32 cwt., 10 ft.

The *Euphrates*, built of iron, 700 horse-power, one of a class of five to form a direct service for the transport of troops to and fro between England and India; length 360 ft., breadth 49 ft., draught 19 ft. forward, 21 ft. aft, tonnage 4,173, speed 13·5 knots (esti-

mated). Building by contract by Messrs. Laird Brothers. Laid down in May, 1865. Designed by the Controller's Department. There are also building on the same lines the *Jumna*, by Messrs. Palmer Brothers; the *Malabar*, by Messrs. Napier and Sons; the *Crocodile*, by Messrs. Wigram; and the *Sarapis*, by the Thames Iron Shipbuilding Company.

IRON-CASED SHIPS.

THIRD CLASS.

The *Trusty*, built of wood, 14 guns, 150 horse-power, length 173 ft. 6¼ in., breadth 45 ft. 1¾ in., draught 8 ft. 4 in. forward, 8 ft. 8 in. aft, tonnage 1,538, speed 4·5 knots. Built by contract, at Limehouse, by Messrs. Wigram. Laid down October, 1854; launched in May, 1855. Broken up in 1865, by Messrs. Castle and Beech. Designed by Surveyor's Department. There were also built about the same time, on the same lines, the *Meteor*, at Limehouse, by Messrs. C. Mare and Co.; the *Glutton*, at Limehouse, by Messrs. Green; and the *Thunder*, at Limehouse, by Messrs. Mare and Co. The armament was fourteen 68-prs., 95 cwt., 10 ft. The complement of men was 200.

The *Erebus*, built of iron, 16 guns, 200 horse-power, length 186 ft. 8½ in., breadth 48 ft. 6 in., draught 8 ft. 6 in. forward, 9 ft. 3 in. aft, tonnage 1,954, speed 4·6 knots. Built by contract, at Glasgow, by Messrs. Napier. Laid down in January, 1856; launched in April, 1856. Designed by Surveyor's Department, after a French model sent to England. There were also built on the same lines, about the same time, the *Terror*, at Newcastle-on-Tyne, by Messrs. Palmer; the *Ætna*, at Chatham; and the *Thunderbolt*, at Millwall, by Messrs. Samuda. The armament was sixteen 68-prs., 95 cwt., 10 ft. The complement of men was 200. These and the *Trusty* class were the first iron-cased ships constructed for H. M. Navy.

The *Research*, built of wood, 4 guns, 200 horse-power, length 195 ft., breadth 38 ft. 6 in., draught 12 ft. 1½ in. forward, 14 ft. 8 in. aft, tonnage 1,253, speed 10·354 knots. Laid down at Pembroke Yard, in September, 1861, as a 17-gun screw-sloop; commenced converting to an armour-plated ship September, 1862; launched August, 1863. Designed by Mr. Reed and the Controller's Department. The armament was:—

No.	
2	6½ ton guns.
2	100 pr. Somerset 6½ ton.

Total . 4

The complement of men was 120.

The *Enterprise*, built of wood, 4 guns, 160 horse-power, length 180 ft., breadth 36 ft. ½ in., draught 11 ft. 10 in. forward, 15 ft. 8 in. aft,

tonnage 993, speed 9·944 knots. Laid down at Deptford Yard, in May, 1862; launched in February, 1864. Designed by Mr. Reed and the Controller's Department. The armament was as as follows:—

No.	
2	6½ ton guns.
2	100 pr. Somerset 6½ ton.
Total	4

The complement of men was 129.

The *Viper*, built of iron, 2 guns, 160 horse-power, length 160 ft., breadth 32 ft., draught 10 ft. 5½ in. forward, 11 ft. 5½ in. aft, tonnage 737, speed 8·9 knots. Built by contract on the River Thames, by Messrs. J. and W. Dudgeon. Laid down in June, 1864; launched in December, 1865. Designed by Controller's Department. There was also built on the same lines, the *Vixen*, on the River Thames, by Mr. C. Lungley, in 1865. The armament was two 6-ton rifled guns; the complement of men was 80.

The *Waterwitch*, built of iron, 2 guns, 160 horse-power, length 162 ft., breadth 32 ft., draught 9 ft. 9 in. forward, 9 ft. 10 in. aft, tonnage 778, speed 8·8 knots (ship light). Built by contract on the Thames by the Thames Iron Shipbuilding Company. Laid down November, 1864; launched in June, 1866. Designed by Rear-Admiral Elliot and the Controller's Department; to be propelled on the hydraulic principle. The armament was two 6-ton rifled guns; the complement of men was 80.

SECOND CLASS.

The *Favorite*, built of wood, 10 guns, 400 horse-power, length 225 ft., breadth 46 ft. 9½ in., draught 19 ft. 7 in. forward, 22 ft. 7 in. aft, tonnage, 2,094, speed 11·825 knots. Laid down at Deptford Yard, in August, 1860, as a 22-gun screw corvette; commenced converting to an iron-cased ship in June, 1862; launched in July, 1864. Designed by Mr. Reed and the Controller's Department. The armament was as follows, viz.:—

No.	Pounders	Weight
4	100	cwt. 120
6	110 Armstrongs	
Total	10	

The complement of men was 200.

The *Pallas*, built of wood, 6 guns, 600 horse-power, length 225 ft., breadth 50 ft., draught 18 ft. 3 in. forward, 24 ft. 1 in. aft, tonnage 2,372, speed 13·058 knots. Laid down at Woolwich Yard, in October, 1863; launched in March, 1865. Designed by Mr. Reed and the Controller's Department. The armament was as follows, viz.:—

No.	Pounders	Weight
4	100	6½ ton guns.
2	110 pr. Armstrongs	
Total	6	

The complement of men was 225.

The *Penelope*, built of wood, 10 guns, 600 horse-power, length 260 ft., breadth 50 ft., draught 15 ft. 9 in. forward, 16 ft. 9 in. aft, tonnage 9,997, speed 12 knots (estimated). Laid down at Pembroke Yard, in September, 1865. Designed by Controller's Department. The armament was to be:—

No.	Pounders	Weight
8	300	12 ton guns
2	40 Armstrongs	
Total	10	

The complement of men was 350.

FIRST CLASS.

The *Warrior*, built of iron, 40 guns, 1,250 horse-power, length 380 ft. 2 in., breadth 58 ft. 4 in., draught 25 ft. 6 in. forward, 26 ft. 5 in. aft, tonnage 6,109, speed 14·356 knots. Built by contract at Blackwall, by the Thames Iron Shipbuilding Company. Laid down in May, 1859; launched in December, 1860. Designed by Surveyor's Department. There was also built on the same lines, the *Black Prince*, at Glasgow, by Messrs. Napier and Son, in 1861. The armament was as follows:—

No.	Pounders	Weight
Main deck	34	68
Upper „	2	68 pivot
	4	40 Armstrongs
Total	40	

The complement of men was 635.

The *Achilles*, built of iron, 20 guns, 1,250 horse-power, length 380 ft., breadth 58 ft. 3½ in., draught 25 ft. 11 in. forward, 26 ft. 11 in. aft, tonnage 6,121, speed 14·332 knots. Laid down at Chatham Yard, in August, 1861, in a dock; undocked in December, 1863. Designed by the Controller's Department, on lines very similar to the *Warrior* and *Black Prince*, built in 1860. The armament was as follows:—

No.	
8	6½ ton guns.
8	6½ ton rifled guns.
4	6½ ton „
Total	20

The complement of men was 705.

The *Defence*, built of iron, 22 guns, 600 horse-power, length 280 ft., breadth 54 ft. 2 in., draught 24 ft. 3 in. forward, 25 ft. 5 in. aft, tonnage 3,720, speed 11'618 knots. Built by contract at Jarrow, by Messrs. Palmer Brothers. Laid down in December, 1859; launched in April, 1861. Designed by Surveyor's Department. There was also built on the same lines the *Resistance*, at Poplar, by Messrs. Westwood and Co., in 1861. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Main deck .	16	68	95	10 0
Upper „ {	2	68 pivot	95	10 0
	4	40 Armstrongs		
Total .	22			

The complement of men was 450.

The *Hector*, built of iron, 32 guns, 800 horse-power, length 280 ft. 2 in., breadth 56 ft. 5 in., draught 24 ft. 2 in. forward, 25 ft. 8 in. aft, tonnage 4,089, speed 12'36 knots. Built by contract at Glasgow, by Messrs. Napier and Son. Laid down in March, 1861; launched in September, 1862. Designed by Controller's Department. There was also built on the same lines the *Valiant*, at Poplar, commenced by Messrs. Westwood and Co., and completed by the Thames Iron Shipbuilding Company in 1863. The armament was as follows:—

	No.	Pounders	Weight
			cwt.
Main deck {	24	68	95
Upper „ .	6	110 Armstrongs	82
	2	110 „	82
Total .	32		

The complement of men was 500.

The *Minotaur*, built of iron, 50 guns, 1,350 horse-power, length 400 ft., breadth 59 ft. 4 $\frac{3}{4}$ in., draught 23 ft. 1 in. forward, 24 ft. 1 in. aft, tonnage 6,621, speed 14'779 knots (ship light). Built by contract at Blackwall, by the Thames Iron Shipbuilding Company. Laid down in September, 1861; launched in December, 1861. Designed by Controller's Department. There were also built on the same lines, the *Agincourt*, at Birkenhead, by Messrs. Laird Brothers, in 1865; the *Northumberland*, at Millwall, commenced by Messrs. Mare and Co., and completed by the Millwall Company in 1866. The armament was as follows:—

	No.	Pounders	Weight	Length
			cwt.	ft. in.
Main deck {	26	68	95	10 0
Upper „ {	8	110 Armstrongs	82	10 0
	6	110 „	82	10 0
	10	70 „	60	9 2
Total .	50			

The complement of men was 705.

The *Zealous*, built of wood, 20 guns, 800 horse-power, length 252 ft., breadth 58 ft. 7 in., draught 25 ft. forward, 25 ft. 9 in. aft, tonnage 3,716, speed 11'7 knots. Laid down at Pembroke Yard in October, 1859; launched March, 1864. Designed by Mr. Reed and the Controller's Department. The armament was as follows:—

	No.	Pounders	Weight
			cwt.
Main deck . {	8	110 Armstrongs	82
	8	68	95
Upper „ .	4	110 Armstrongs	82
Total .	20		

The complement of men was 455. This ship was originally designed and commenced as a line-of-battle ship of 91 guns, 3,716 tons, and 800 horse-power; but by an Admiralty Order of July 2, 1862, she was converted to an armour-plated ship of 20 guns.

The *Royal Oak*, built of wood, 34 guns, 800 horse-power, length 273 ft., breadth 58 ft. 6 in., draught 23 ft. 8 in. forward, 25 ft. 8 in. aft, tonnage 4,056, speed 12'529 knots. Laid down at Chatham Yard, in May, 1860; launched in September, 1862. Designed by Controller's Department. There were also built on the same lines, the *Caledonia*, at Woolwich, in 1862; the *Prince Consort*, at Pembroke, in 1862; and the *Ocean*, at Devonport, in 1863. The armament was as follows:—

	No.	Pounders	Weight
			cwt.
Main deck {	24	68	95
Upper „ .	8	110 Armstrongs	82
	2	110 Armstrongs	82
Total .	34		

Her complement of men was 605. The ships of this class were originally designed and commenced as line-of-battle ships of 91 guns, 3,716 tons, and 800 horse-power; but, by Admiralty Order of May 14, 1861, they were converted to armour-plated ships.

The *Royal Alfred*, built of wood, 18 guns, 800 horse-power, length 273 ft., breadth 58 ft. 7 in., draught 19 ft. 8 in. forward, 22 ft. 9 in. aft, tonnage 4,068, speed 13'041 knots (ship light). Laid down at Portsmouth Yard, in December, 1859; launched October, 1864. Designed by Controller's Department. The armament was as follows:—

	No.	Pounders	Weight
			cwt.
Main deck {	10	9-inch	12 $\frac{1}{2}$
Upper „ .	4	7-inch	6 $\frac{1}{2}$
	4	7-inch	6 $\frac{1}{2}$
Total .	18		

The complement of men was 600. This ship was originally designed and commenced as a line-of-battle ship of 91 guns, 3,716 tons, 800 horse-power, but by Admiralty Order of June 5, 1861, she was converted into an iron-cased ship.

The *Lord Clyde*, built of wood, 24 guns, 1,000 horse-power, length 280 ft., breadth 58 ft. 11 in., draught 22 ft. 3 in. forward, 24 ft. 9 in. aft, tonnage 4,067, speed 13·534 (ship light). Laid down at Pembroke Yard, in September, 1863; launched in October, 1864. Designed by Mr. Reed and the Controller's Department. The armament was as follows:—

Main deck	No. 20	6-ton guns.
Upper „	4	110-pr. Armstrongs.
Total	24	

The complement of men was 605.

The *Lord Warden*, built of wood, 24 guns, 1,000 horse-power, length 280 ft., breadth 59 ft. 0½ in., draught 22 ft. 3 in. forward, 24 ft. 9 in. aft, tonnage 4,080, speed 13·5 knots (estimated). Laid down at Chatham Yard, in December, 1863; launched in May, 1865. Designed by Mr. Reed and the Controller's Department. The armament was as follows:—

Main deck	No. 20	6-ton guns.
Upper „	4	110-prs. Armstrongs.
Total	24	

The complement of men was 605.

The *Bellerophon*, built of iron, 14 guns, 1,000 horse-power, length 300 ft., breadth 56 ft. 1 in., draught 21 ft. 6 in. forward, 26 ft. 5 in. aft, tonnage 4,270, speed 14·171 knots. Laid down at Chatham Yard, in December, 1863; launched in April, 1865. Designed by Mr. Reed and the Controller's Department. The armament was as follows:—

Main deck	No. 10 4	Prs. 300 110 Armstrongs.
Total	14	

The complement of men was 475.

The *Hercules*, built of iron, 12 guns, 1,200 horse-power, length 325 ft., breadth 59 ft., draught 22 ft. 6 in. forward, 26 ft. 6 in. aft, tonnage 5,226, speed 14 knots (estimated). Laid down at Chatham Yard, in February, 1866. Designed by the Controller's Department. The armament is to be as follows:—

Main deck	No. 8 2	18-ton guns. 12 „
Upper „	2	64 prs., 65 cwt.
Total	12	

The complement of men to be 600.

TURRET SHIPS.

The *Scorpion*, late *El Tousson*, built of iron, 4 guns, 350 horse-power, length 224 ft. 6 in., breadth 42 ft. 4½ in., draught 14 ft. 11 in. forward, 16 ft. 4 in. aft, tonnage 1,833, speed 10·515 knots. Built by Messrs. Laird, at Birkenhead. Launched in July, 1863. Designed by Messrs. Laird. There was also built on the same lines, the *Wivern*, late *El Monassir*, at Birkenhead, at the same time. Her armament was four 12-ton guns in turrets. The complement of men was 150.

The *Prince Albert*, built of iron, 4 guns, 500 horse-power, length 240 ft., breadth 48 ft. 1 in., draught 17 ft. 9 in. forward, 19 ft. 10 in. aft, tonnage 2,529, speed 11·652 knots. Built by contract, at Blackwall, by Messrs. Samuda. Laid down in April, 1862; launched in May, 1864. Designed by Controller's Department. Her armament was four 12-ton guns in turrets. The complement of men was 200.

The *Royal Sovereign*, built of wood, 5 guns, 800 horse-power, length 240 ft. 7 in., breadth 62 ft. 2 in., draught 21 ft. 2 in. forward, 24 ft. 8 in. aft, tonnage 3,765, speed 11·003 knots. Commenced converting to an iron-cased turret ship in April, 1862, at Portsmouth Yard; undocked in March, 1864. Designed by Controller's Department. The armament was five 12-ton guns in turrets. The complement of men was 200. This ship was originally designed and built as a line-of-battle ship of 131 guns, 3,765 tons, and 800 horse-power. Launched in April, 1857; but by Admiralty Order, of April 3, 1862, she was converted to an iron-cased turret ship.

The *Monarch*, built of iron, 6 guns, 1,100 horse-power, length 330 ft., breadth 57 ft. 6 in., draught 22 ft. 6 in. forward, 26 ft. aft, tonnage 5,100, speed 14 knots (estimated). Laid down at Chatham Yard, in June, 1866. Designed by the Controller's Department. Her armament is to be four 22-ton guns in turrets, and two 100-prs. The complement of men to be 525.

The *Captain*, built of iron, 6 guns, 900 horse-power, length 320 ft., breadth 53 ft. 3 in., draught 22 ft. 6 in. forward, 23 ft. 6 in. aft, tonnage 4,272, speed 14 knots (estimated). Building by contract by Messrs. Laird & Co., at Birkenhead. Designed by Messrs. Laird and Captain Coles.

3. MODELS OF SYSTEMS OF CONSTRUCTION OF IRON-CASED SHIPS.

Half midship section (on a scale of ½-an-inch to a foot) of H. M. iron-cased frigate *Warrior*, launched December, 1860, showing the detailed arrangement of the framing, and mode of combining the several parts of the hull amidships;

the features having the greatest claim to novelty being distinguished by letters:—

- A Flat keel plates, worked in two thicknesses, continuously.
- B Vertical keel plate, continuous.
- C Flat keelson or gutter plate, continuous, also forming part of inner-bottom plating.
- D Box keelson, continuous.
- E Box boiler-bearers.
- F Floor plate, fitted between vertical keel and lower longitudinal frame.
- G Short transverse frame plates, fitted between longitudinal frames.
- H Longitudinal frames, continuous.
- I Bilge keels.
- K Transverse frame, continuous.
- L Wood backing in two thicknesses, of 10 inches longitudinally, and 8 inches vertically.
- M $4\frac{1}{2}$ -inch armour-plates.

Half midship section (on a scale of $\frac{1}{2}$ -an-inch to a foot) of H. M. iron-cased frigate *Bellerophon*, launched April, 1865, showing the detailed arrangement of the framing and mode of combining the several parts of the hull amidships; the features having the greatest claim to novelty being distinguished by letters:

- A Flat keel plates, worked in two thicknesses, continuously.
- B Vertical keel plates, continuous.
- C Vertical keelson, continuous.
- D Watertight transverse frames, fitted between longitudinals.
- E Short transverse bracket frames, fitted between longitudinals.
- F Longitudinal frames, continuous.
- G Transverse angle irons.
- H Transverse frames.
- I Inner bottom plating.
- K Box boiler bearers.
- L Wing passage bulkhead.
- M Transverse watertight bulkhead.
- N Plates to support the end of beams under battery.
- O Girders to support the beams under battery.
- P Gutter for draining decks, continuous.
- Q Bracket frames, to form topsides.
- R Bilge keels.
- S Topside plates behind armour, worked in two thicknesses, continuously.
- T External longitudinal girders, continuous.
- U Wood backing 10 inches thick, worked longitudinally.
- V 6-inch armour plates.

Stern framing (on a scale of $\frac{1}{2}$ -an-inch to a foot) of H. M. iron-cased frigate *Bellerophon*, launched April, 1865, showing the stern post, stern tube, after part of keels, and mode of securing the lower part of the balanced rudder.

Half midship section (on a scale of $\frac{1}{2}$ -an-inch to a foot) of H. M. iron-cased frigate *Hercules*,

building at Chatham, showing the detailed arrangement of the framing, and mode of combining the several parts of the hull amidships; the features having the greatest claim to novelty being distinguished by letters:—

- A Flat keel plates, worked in two thicknesses, continuously.
- B Vertical keel plates, continuous.
- C Vertical keelson, continuous.
- D Watertight transverse frames, fitted between longitudinals.
- E Short transverse bracket frames, fitted between longitudinals.
- F Longitudinal frames, continuous.
- G Transverse angle irons.
- H Transverse frames.
- I Inner bottom plating.
- K Box boiler bearers.
- L Wood fillings, worked longitudinally between the ship's side and the side bulkhead.
- M Side bulkhead.
- N Transverse watertight bulkhead.
- O Gutters for draining decks, continuous.
- P Bilge keels.
- Q Topside plates behind armour, worked in two thicknesses, continuously.
- R External longitudinal girders, continuous.
- S Wood backing, 12-in. thick, worked longitudinally.
- T 9-inch armour plates.
- U 8-inch " "
- W 6-inch " "

—:—

4. MODELS OF THE GENERAL FITTINGS OF MEN-OF-WAR,

Including Condensing & Cooking Apparatus, &c.

MAGAZINE.—Section (on a $\frac{1}{2}$ inch scale) showing the magazine and all internal works, and of the light, handing, and shell rooms, with all light boxes, lamps, lanterns, and guards thereto, also the ventilating and telegraph arrangements.

FITTINGS FOR PIVOT GUN.—Section (on a $\frac{1}{2}$ inch scale) showing the upper deck of H. M. S. *Zebra* with the 68-pr. pivot gun in position, with radius and other plates, sockets, bolts, &c.

FITTINGS FOR BROADSIDE GUN.—Section (on a $\frac{1}{2}$ inch scale) of H. M. S. *Caledonia* between decks, showing the ports and a $6\frac{1}{2}$ -ton gun in position, with the ring and shackle eyebolts to ports, training and rear-tackle bolts and sockets in deck, dismounting cranks and bolts, muzzle lashing bolts, and all others; also the cranks and hooks for stowing shell, grape, and canister boxes, sponge, stores, &c.

FITTINGS FOR CARRONADE.—Section (on a $\frac{1}{2}$ inch scale) showing a port, with plates, bolts sweep pieces, and other fittings for carronades.

PORT LIDS.—Section (on a $\frac{1}{2}$ inch scale) of a ship's side, showing a gun-deck port, with the port lids and means of securing the same.

STERN SASHES.—Stern of a ship (on a $\frac{1}{2}$ inch scale) showing the munions and stern sashes, fitted with blinds, or deadlights.

SIDE AIR SCUTTLE.—Section (on a $\frac{1}{2}$ inch scale) showing a side air scuttle, with all fastenings, rings, bolts, nozzles for pendants, &c.

LANG'S TUBE SCUTTLE.—Section (on a 3 inch scale) of a ship's side, showing the Lang's tube scuttle, plug, and all fittings connected therewith.

SKYLIGHT.—Section (on a 1 inch scale) showing a skylight, with sashes and deadlights.

IRON SCUTTLE (full-sized) including grating and cover, as fitted in the decks over the coal bunkers, for ventilating them, and for coaling the ship.

VENTILATION.—Half section (on a $\frac{1}{2}$ inch scale) of about 50 feet of the midship part of H. M. S. *Nympe*, showing the details of the ventilating arrangements, on the plan of Dr. Edmunds, as adopted in that and other vessels.

A Ventilating trunks on each side of the ship, extending about three-fourths of her length, for withdrawing foul air from the bilges and lower deck.

B Holes, one in each opening, for ventilating the bilges.

C Holes, one in each opening, for ventilating the lower deck.

D Tubes for conveying the foul air from the trunks A to the hollow iron masts.

E Tubes for conveying the foul air from the trunks A to the funnel, when it is up, or to the air casing round the funnel, when it is down.

VENTILATION OF ENGINE ROOM, &c.—Section (on a $\frac{1}{4}$ inch scale) showing the ventilating arrangements to engine-room, stokehole, shaft passage, &c.

VENTILATING RIDING BITT.—Section (on a $\frac{1}{2}$ inch scale) of the deck of H. M. S. *Bellerophon*, showing the wrought-iron ventilating riding bitts, on the plan patented by Messrs. Harfield, with the vertical web plates for connection with lower deck, as fitted in that and other ships, together with the chain cable, compressors, and controllers.

CAPSTAN.—Model (on a 1 inch scale) of a single wrought-iron capstan and cable holder, with adjustable stops, on the plan patented by Messrs. Harfield & Co., showing also the direct lead of the chain cable, deck rollers, &c., as fitted to ships of the Royal Navy.

STOWING ANCHOR.—Model (on a $\frac{1}{2}$ inch scale) of the bows of H. M. S. *Bellerophon*, showing the anchor with the necessary fittings for stowing and letting go, including bolsters, chocks and linings, bill-boards and plates,

shank painter, slip stopper, crutches, fish davits and steps, and all necessary bolts and cleats.

HAWSE-HOLE.—Section (on a $\frac{1}{2}$ inch scale) of the bow of a ship, showing the hawse-hole, and method of fitting the plugs and bucklers.

RUDDER.—Model (on a $\frac{1}{2}$ inch scale) of the balanced rudder of H. M. S. *Bellerophon*, showing the tiller and yoke with tiller ropes and blocks, the paul or locking plate, and plate to secure the tiller, &c.; also the rudder pendants and other fittings.

LUMLEY RUDDER.—Model showing Mr. Lumley's first or chain system. First fitted to the *Bullfinch* gunboat at Portsmouth, October 1862; then applied to the *Columbine*, steam corvette, *Lizard*, *Locust*, *Otter*, *Adder*, and other vessels. Patented by Mr. Henry Lumley, Assoc. I.N.A.

STEERING WHEEL.—Model (on a 2 inch scale) of the wheel stanchions and steering wheel complete, with index plate and all fittings, as fitted in H. M. S. *Bellerophon*, and other ships of the Royal Navy.

DISPENSARY.—Model (on a 1 inch scale) of a dispensary with all fittings.

PANTRY.—Section (on a 1 inch scale) showing the pantry and all internal fittings.

SEAMEN'S SHELVES.—Section (on a 1 inch scale) showing the seamen's shelves, with plate racks, &c.

BAG RACKS.—Section (on a 1 inch scale) showing the seamen's bag racks and method of securing the mess tables and stools thereto.

HATCH AND LADDER WAYS.—Section (on a 1 inch scale) showing the companion and hoods over hatch and ladder ways.

ACCOMMODATION LADDER.—Section (on a $\frac{1}{2}$ inch scale) of a ship's side, showing the accommodation ladder, with platform, stanchions, and all necessary fittings.

CRUTCHES FOR BOATS, &c.—Section (on a $\frac{1}{2}$ inch scale) of a deck, showing the crutches with the boats and booms stowed and all spare gear.

HAMMOCK BERTHING.—Section (on a $\frac{1}{2}$ inch scale) showing the hammock berthing, with stanchions, wash-boards and brackets, rails and battens for securing the hammocks; also shifting pieces over the ports.

BOAT LOWERING APPARATUS.—Model (on a 2 inch scale) of a section of a ship's side, with a 28-foot cutter suspended at the davits by Kynaston's boat lowering hook; also a specimen hook, full size.

LIGHTS.—Models (on a 1 inch scale) of a bow and of a paddle-box, showing the light-boxes; also a light-box, full size.

EVOLUTION BRIDGE.—Section (on a $\frac{1}{2}$ inch scale) showing the evolution-bridge, with stanchions and ladders, the voice pipes for

municating with the engine-room, and also the telegraph arrangement.

LIGHTNING CONDUCTORS.—Section (on a $\frac{1}{2}$ inch scale) showing the method of fitting the lightning conductors to the masts in connection

with the ship, on the plan of Sir William Snow Harris.

CHANNELS.—Section (on a $\frac{1}{2}$ inch scale) showing the channels, with the dead-eyes and preventer plates.

BLOCKS:—

Description	Size	For what purpose used
WOODEN.		
Single thick, single scored	10	Fore and main top burtons
Do. double do.	11	Spanker boom sheets
Single thin, single do.	18	Main topsail tie
Do. double do.	20	Fore and main topsail braces
Clumps	7	Swinging boom guys
Double thick, single scored	10	Fore and main truss falls
Do. double do.	11	Spanker sheets
Double thin, single do.	20	Main stay tackle pendants
Longtackle	13	Spanker boom topping lift falls
Sister	18	Mizen topsail lifts
Treble thick, double scored	28	Careening purchase (sea store)
Block, fourfold	28	Do. do.
Heart, single scored	18	Fore and main stays
Dead eyes shroud	16	Do. lower shrouds
Snatch, iron bound	24	Fore and aft leads
Nine pin	11	Leads round fore and main masts
Toptackle, single, iron bound	20	Toptackles
Do. double, do.	15	
Do. treble, do.	18	
Treble thick, with brass shivers, iron bound	20	Screw propeller purchase
Do. with lignum vitæ shivers, do.	20	
Double thick, with brass shivers, do.	12	Leads on deck for lower lifts
Do. with lignum vitæ shivers, do.	12	
Single thick, with brass shivers do.	12	
Do. with lignum vitæ shivers, do.	12	Do. top staysail halyards
Cat, treble, with swivel hook, iron bound	15	Do. Mizen topsail do.
MALLEABLE CAST IRON.		
Single	10	Gunner's slide tackles
"	16	Topsail ties
"	10	Peak and throat halyards
"	10	Engine-room purposes
"	12	Leads on deck
"	12	Do.
"	18	Leading blocks
"	10	Do.
"	14	Lifts at cap
"	14	Do.
"	18	Jeer falls
"	18	Do.
Double	12	Topsail halyards
"	12	Quarter boats falls, davit head
Treble	18	Jeers and toptackle falls
Dead eyes for wire, upper	—	Lower shrouds
" lower		
" rope, upper	—	Topmast backstays
" " lower	—	

LIFE-BUOY.—Model (on a 1 inch scale) of the stern of a ship, showing the life buoy, with all necessary fittings for letting go, guards &c.; also a life buoy, full size.

(full size) and all fittings connected therewith; also a chronometer.

BITTACLES.—Bittacles on stand (full size). with compass lamp and all fittings connected therewith.

CHRONOMETER STAND.—Chronometer stand

DOWNTON'S PUMPS (full size), and all fittings connected therewith, including cranks, &c., for working them.

CONDENSERS (full size) of H. M. S. *Sappho*, suitable for a complement of 140 men, with all the requisite fittings, including Kingston's cocks and valves. The condenser shown is only one of the pair to be supplied.

FIRE HEARTH (full size), on Mr. Blake's plan, suitable for a complement of 140 men, as supplied for H. M. S. *Sappho*.

5. SPECIMENS OF SUCH ARTICLES OF FOOD

In use in Her Majesty's Navy as are Manufactured in the Government Victualling Yards.

Biscuit; Chocolate; Mustard; Flour; Biscuit-meal; Oatmeal; Salt Beef; Preserved Beef; Essence of Beef.

NOTE.—Manufactured in the Royal Victoria Yard at Deptford.

6. SPECIMENS OF BOATS IN USE IN H. M. NAVY.

STEAM LAUNCH, as supplied to the larger class of ships of H. M. Navy: diagonally built of two thicknesses; length 42 ft., breadth 11 ft. 6 in., depth 3 ft. 9 in., fitted with four cylinder twin-screw engines of 6 horse-power collectively (by Messrs. Maudsley and Sons), constructed for rowing eighteen oars, double banked, to carry one 12-pounder breech-loading gun, at bow or stern, and adapted for weighing small anchors, hauling in or under running of hawsers, &c. Rig: two standing lugs, foresail and jib. With this boat there are the following fittings, viz.: two masts and rigging complete, two yards, four boom crutches, sixteen oars 17 ft. long and two 16 ft. long, two wood tillers, one anchor, four boat hooks, one pump, one bailer, one bucket, two awning stanchions, one set of awnings, one ensign and staff, one pendant and staff, twenty boat fenders, one canvas boat cover, and one 12-pounder breech-loading gun with carriage and slide complete (newest pattern).

PINNACE, as supplied to the smaller class of ships of H. M. Navy, or for the use of officers of subordinate rank: diagonally built of two thicknesses, length 32 ft., breadth 9 ft. 4 in., depth 3 ft. 2 in., constructed for rowing fourteen oars, double banked, to carry a 12-pounder gun at bow or stern, and adapted for weighing small anchors, hauling in or under running of hawsers, &c. Rig: two standing lugs, foresail and jib. With this boat there are the following fittings, viz.: two masts and rigging complete, two yards, four boom crutches, twelve oars 16 ft. long and two 15 ft. long, two wood tillers, one anchor, four boat hooks, twelve barricoes, one pump, one bailer, one bucket, two awning stanchions one set of awnings, one ensign and staff, one pendant and staff, eighteen

boat fenders, one canvas boat cover, and one 12-pounder breech-loading gun with carriage and slide complete (newest pattern).

CUTTER, for general use and for the conveyance of seamen and the lighter stores: it is shorter and rather broader in proportion to the length than the launch, is clencher built and constructed to row twelve oars, double banked, and for sailing, length 28 ft., breadth 7 ft. 7 in., depth 2 ft. 6½ in. Rig: one dipping lug, one standing lug. With this boat there are the following fittings, viz.: two masts and rigging complete, two yards, eight oars 15 ft. long and four 14 ft. long, one iron tiller and one wood, one anchor, three boat hooks, six barricoes, one bailer, one bucket, two awning stanchions, one awning, one ensign and staff, one pendant and staff, fourteen boat fenders, one canvas boat cover, one rocket tube for Hall's 24-pound rocket (of latest approved pattern).

JOLLY BOAT, like a small cutter for general use: clencher-built, and constructed to row eight oars, double banked, and for sailing; length 18 ft., breadth 6 ft., depth 2 ft. 2 in. Rig: two sails, fore dipping lug, mizen standing lug. With this boat there are the following fittings, viz.: two masts and rigging complete, two yards, six oars 12 ft. long and two 11 ft. long, one iron tiller and one wood, one anchor, three boat hooks, two barricoes, one bailer, two awning stanchions, one awning, one ensign and staff, one pendant and staff, ten boat fenders, and one canvas boat cover.

DINGY, small boat for general use: clencher-built, and constructed to row four oars, single banked; length 14 ft., breadth 5 ft. 2 in., depth 2 ft. 2 in. Rig: one dipping lug. With this boat there are the following fittings, viz.: one mast and rigging complete, one yard, two oars 12 ft. long and two 10 ft. long, one wood tiller, one anchor, two boat hooks, one bailer, two awning stanchions, one awning, one ensign and staff, one pendant and staff, six boat fenders, one canvas boat cover.

GIG, a light boat for speedy rowing, having a slight frame: clincher-built, and constructed to row six oars, single banked; length 28 ft., breadth, 5 ft. 6 in., depth, 2 ft. 2 in. Rig: one dipping lug. With this boat there are the following fittings, viz.: one mast and rigging complete, one yard, four oars 18 ft. long and two 17 ft. long, brass yoke, one anchor, three boat-hooks, one barricoe, one bailer, two awning stanchions, one ensign and staff, one pendant and staff, ten boat fenders, and canvas boat cover.

WHALE BOAT.—A light boat for speedy rowing, with great sheer of gunwale for beaching through a surf, double-headed; shorter keel and more raking stem and stern port, to facilitate her being rapidly turned to place her end-on to a rolling sea; clencher-built, and constructed to row six oars, single-banked; length 27 ft., breadth 5 ft. 4 in., depth 2 ft. 2 in. Rig: one dipping lug. With this boat there are the following fittings, viz.: one mast

and rigging complete, one yard, four oars 17 ft. and two 16 ft. long, one tiller and yoke, one anchor, three boat hooks, one barricoe, one bailer, two awning stanchions, one ensign and staff, one pendant and staff, ten boat fenders, and one canvas boat cover.

CUTTER LIFE-BOAT.—This boat represents an improved service cutter, combining the essentials of a life-boat—extra buoyancy, self-discharge of water by means of six self-acting valves in twenty-three seconds, self-righting power if upset, ballasting, good stowage room for a shipwrecked crew, and great stability; diagonally built of two thicknesses, with a layer of painted calico between the planks, twenty planks of each skin are of one length, and extend from gunwale to gunwale. The chief peculiarity of the boat, which distinguishes it from the ordinary service cutter, is its being made unsubmergible, by fitting to it a water-tight deck, detached air-cases round the sides under the thwarts, and the portable cases in the extremes, which gives the self-righting power, assisted by the iron keel. Length, 28 ft., breadth 7 ft. 6 in., depth 3 ft. 3 in., and constructed to row ten oars double banked. Rig: one standing lug and jib for foul weather, and two standing lugs and jib for fine weather. With this boat there are the following fittings, viz.: two masts and rigging complete, two yards, ten oars 14 ft. long and two sweep oars for steering, ten galvanised iron crutches on tholes for rowing, and two steering crutches, one yoke, one tiller, one anchor, two boat-hooks, six barricoes, one bailer, one bucket, one ensign and staff, one pendant and staff, fourteen boat fenders, one canvas cover, twelve cork life-belts, one life-buoy, one canvas drogue, ten cork floats, one hand grapnel and line, one boat compass (furnished with lamp, oil-can, matches, &c.), one loaded cane and line, one brass pump.

WHALE LIFE-BOAT.—This boat possesses all the qualities of a ship of war's whale boat. Length 27 ft., breadth 5 ft. 6 in., depth 2 ft. 3 in.; diagonally built of two thicknesses, with a layer of painted calico between, and constructed to row five oars single banked. The advantages consisting in the extra buoyancy obtained by the detached air-tight cases placed on the floors, in the head and stern sheets, under the thwarts at the sides, central cases amidships and athwart ships under the thwarts, to prevent any rush of water to the sides or fore and aft, and the raised air cases in the extremes, thereby rendering the boat capable of rising under the weight of water that may break into her, and thus enable the four 6-inch self-acting valves to act, and free the boat to the level of the load water-line; thus, with the arrangement of the portable cases in the extremes, and the increased sheer given to the gunwales, the boat would self-right if upset in a seaway, and rendered impossible of foundering if met by a succession of seas breaking into her. Rig: one dipping lug. With this

boat there are the following fittings, viz.: one mast and rigging complete, one yard, five oars 17 ft. long and two sweep oars, wood yoke and tiller, one anchor, two boat hooks, five galvanised iron crutches on tholes for rowing and two for steering, three barricoes, one bailer, two awning stanchions, one awning, one ensign and staff, one pendant and staff, ten boat fenders, one canvas cover, seven life-belts, one life-buoy, one canvas drogue, ten cork floats, one hand grapnel and line, one loaded cane and line, one boat's compass, furnished with lamp, oil-can, matches, &c.

Engine Models—*Modèles de Machines.**Modelle von Maschinen—Modelli di Macchine.*

Model of the Engines of H.M.S. 'Lord Clyde,' of 1,000 nominal horse-power, capable of working up to 6,000 horse-power, having cylinders 116 in. diameter, and fitted with surface condensers.

Model of the Engines of the Holyhead Mail Packets 'Leinster' and 'Connaught,' of 720 nominal horse-power, having oscillating cylinders, 98 in. in diameter.

Modèle des Machines du vaisseau de la Marine Militaire de Sa Majesté le 'Lord Clyde,' de 1,000 chevaux de puissance nominale, capables de fonctionner jusqu'à une puissance de 6,000 chevaux, ayant des cylindres de 116 pouces—2 m. 95 c.—de diamètre, et munies de condensateurs de surface.

Modèle des Machines des Paquebots-Poste d'Holyhead, le 'Leinster' et le 'Connaught' de 720 chevaux de puissance nominale, avec cylindres oscillants de 98 pouces—2 m. 49 c.—de diamètre.

Modell der Maschinen Ihrer Majestät Schiff 'Lord Clyde,' 1,000 nominale Pferdekraft, fähig bis 6,000 Pferdekraft, mit Cylindern, 116 Zoll Durchmesser, und Oberfläche-Compressions-Maschinen.

Modelle der Maschinen der Holyhead-Postdampfschiffe 'Leinster' und 'Connaught,' von 720 nominaler Pferdekraft, mit oscillirenden Cylindern, 98 Zoll Durchmesser.

Modello delle Macchine del Real Piroscapo 'Lord Clyde,' della forza nominale di 1,000 cavalli, capaci di agire con una forza di fino a 6,000 cavalli, avendo cilindri di 116 pollici di diametro, ed essendo fornite di condensatori in superficie.

Modelli delle Macchine dei Piroscafi Postali di Holyhead 'Leinster' e 'Connaught,' della forza nominale di 720 cavalli, aventi cilindri oscillanti di 98 pollici di diametro.

ROYAL NATIONAL LIFE-BOAT INSTITUTION OF ENGLAND,
For the Preservation of Life from Shipwreck. (Incorporated by Royal Charter.)

Founded in 1824.—Supported by Voluntary Contributions.

Patroness—Her Most Gracious Majesty the Queen. *President*—The Right Honourable the Earl Percy, P.C. *Chairman*—Thomas Baring, Esq., M.P., F.R.S., V.P. *Deputy-Chairman*—Thomas Chapman, Esq., F.R.S., V.P. *Secretary*—Richard Lewis, Esq., of the Inner Temple, Barrister-at-Law. *Life-boat Inspector*—Capt. J. R. Ward, R.N. *Assistant Life-boat Inspector*, Capt. D. Robertson, R.N.

The object of this institution, as declared in its title, is to afford assistance to every wrecked person around the coasts of the United Kingdom.

The chief means by which the society hopes to carry this object into effect are:—

To build, station, and maintain in repair life-boats of the most perfect description; to furnish them with all necessary appurtenances, including houses to preserve them in, and carriages for their conveyance to the spots where their services are called for; and further, to provide, through the instrumentality of local committees, for their proper manage-

ment, and the occasional exercise of their crews.

To confer honorary rewards in the form of medals and votes of thanks, and also to grant pecuniary remuneration to all persons who at the risk of their own lives, save, or attempt to save, those of others on board vessels wrecked, or in distress, upon any part of the coasts of the United Kingdom.

As an index of the necessity for the provision of such a machinery as the above, it may be stated, that the average loss of lives from shipwreck annually on the shores of the United Kingdom is 600.

General Summary of the Services of the Life-boats of the Institution during 1866:—

		£	s.	d.
Number of lives rescued by life-boats, in addition to 17 vessels saved by them	—	426	—	—
Number of lives saved by shore-boats, &c.	—	495	—	—
Amount of pecuniary rewards for saving life during the year	—	2,173	2	3
Honorary rewards:—Silver medals	16	—	—	—
Votes of thanks on vellum and parchment	25	—	—	—
Total	41	921	2,173	2 3

During the year 1866 the Royal National Life-boat Institution also expended 31,430*l.* in addition on its various life-boat establishments on the coasts of England, Scotland, and Ireland.

The number of lives saved, either by the life-boats of the society or by special exertions, for which it has granted rewards since its formation, is 15,893, for which services 82 gold medals, 767 silver medals, and 23,410*l.* in cash have been given in rewards. The institution has also expended 162,163*l.* on its one hundred and seventy-two life-boat establishments.

The following are Extracts from the General Rules of Management:—

‘Each life-boat to have a coxswain superintendent, with a fixed annual salary of 8*l.*, and an assistant coxswain with a yearly salary of 2*l.*

‘The life-boat to be regularly taken afloat for exercise once every quarter, fully manned and equipped, so that the crew may be familiar with her qualities and proper management. On every occasion of exercise, the men are to be paid 5*s.* each in stormy weather and 3*s.* each in fine weather; and on every occasion of going off to a wreck to save life, each man of

the crew to receive 10*s.* by day, and 1*l.* by night. These payments to be doubled on occasions either of extraordinary risk or of long exposure.

‘The life-boat to be kept on her carriage, in the boat-house, with all her gear in her ready for use. Signals are agreed upon for calling the life-boat’s crew together; and immediately on intimation of a wreck, or vessel in distress the coxswain is to muster his crew, who are to put on their life-belts, launch his boat, and proceed to her assistance.

‘The local committee to make quarterly inspection, and report to the institution as to the behaviour of the boat during exercise, pointing out any defect that may be remedied, and offering any suggestion that may conduce to the efficiency of the service.’

The expense of a life-boat station is 620*l.* Its cost is made up as follows:—

Life-boat and her equipment, including life-belts for the crew, and transporting carriage for the life-boat	£420
Boat-house (average cost)	200
Total	£620

The average annual expense of maintaining a life-boat station is 50*l.*

THE LIFE NATIONAL LIFE-BOAT INSTITUTION.

Fig. 1.

Sheer Plan.

Fig. 2.

Deck Plan.

Fig. 3.

Body Plan.

Fig. 4.

Midship Section.

The accompanying figures show the general form, the nature of the fittings, and air-chambers of one of these boats, 33 feet in length and 8 feet in breadth. In figs. 1 and 2, the elevation and deck plans, the general exterior form of the boat is shown with the sheer of gunwale, length of keel, and rake of stem and stern-posts. The dotted lines of fig. 1 show the position and dimensions of the air-chambers within board, the relieving-tubes, and ballast. In fig. 2, A represents the deck, B the relieving-tubes (six inches in diameter), C the side air-cases, D the end air-chambers, E ballast, F scuttles to admit of a free current of air under the water-tight deck, G scuttle for air and to receive pump. In fig. 3, the exterior form of transverse sections, at different distances from stem to stern, is shown. Fig. 4 represents a midship transverse section, A being sections of the side air-cases, B the relieving-tubes, of the same depth as the space between the deck and the boat's floor. C, C, C, C, are spaces beneath the deck, placed longitudinally, at the midship part of the boat, with cases packed with cork, forming a portion of the ballast; d, scuttle for ventilation, having a

pump fixed in it, by which any leakage beneath the deck can be pumped out by one of the crew whilst afloat. The festooned lines in fig. 1 represent exterior life-lines attached round the entire length of the boat, to which persons in the water may cling till they can be got into the boat; the two central lines are festooned lower than the others, to be used as stirrups, so that a person in the water, by stepping on them, may climb into the boat without assistance.

This life-boat possesses in the highest degree all the qualities which it is desirable that a life-boat should possess:—

1. Great lateral stability or resistance to upsetting.
2. Speed against a heavy sea.
3. Facility for launching and taking the shore.
4. Immediate self-discharge of any water breaking into her.
5. The important advantage of self-righting if upset.
6. Strength.
7. Stowage-room for a large number of passengers.

The house of the National Life-boat Institution is at 14, John Street, Adelphi, London, where every information can be obtained of the Secretary, Richard Lewis, Esq., respecting its life-boats, working plans for the construction of similar life-boats in foreign countries, instructions for the restoration of the apparently dead from drowning, and on the means in actual use on the coasts of the British Isles for saving life from shipwreck.—*London, March, 1867.*

TRINITY HOUSE CORPORATION, TOWER-HILL, LONDON.

Electric and other Lighthouse Apparatus; Fog Signals; Models of Vessels, Buoys, Beacons, &c.

The Honorable Corporation of Trinity House, which, in conjunction with the Commissioners of Northern Light-houses and the Port of Dublin Corporation—as the general light-house authorities of Great Britain and Ireland—exhibits lighting apparatus and models of light-houses, buoys and beacons, &c., dates its origin back to some period antecedent to the 16th century. In the reign of Henry VIII., King of England and Ireland, it received its first complete organisation as the corporate representation of the shipmen or mariners of England (A.D. 1514). And by an act passed in the eighth year of the reign of Queen Elizabeth it was constituted the authority for buoyage and beaconage. It was designed by its original charter (Henry VIII.) to be a support and nursery to the Royal Navy, being expressly entrusted with arrangements for the increase and maintenance of ships and sailors for Royal Service, together with the entire charge of the Deptford Yard, then first established.

This part of the functions of the Trinity House has ceased, but it retains the important public duties of lighting and buoying the coasts of England and Wales, which have now grown into a great branch of the public service.

The Corporation also regulates, with a few special exceptions, the entire pilotage service of those coasts; is responsible for the qualification of masters in the Royal Navy to take pilotage charge of Her Majesty's ships in British waters; and for the due administration of justice in nautical cases by furnishing Assessors to the Judge in the High Court of Admiralty.

Under the grant of Elizabeth it was also charged with the supply of ballast to ships in the River Thames; and it disburses large sums annually from its private resources to necessitous persons connected with the mercantile marine of the country.

The Corporation consists of an indefinite number of members, of whom thirty-one are styled Elder, and the remainder Younger, Brethren. The Master, who is generally a member of the Royal Family, or a statesman of high rank, has associated with him ten noblemen or gentlemen who have (as a rule) been eminent in the great public departments of the state; the conduct of its active duties rests with twenty of the Elder Brethren, under the presidency of the Deputy-Master, and their numbers complete the thirty-one Elder

Brethren. The twenty acting Brethren are officers of the mercantile marine, and of Her Majesty's Navy, the latter being a small proportion of the whole number, and consisting, at this time, of two Admirals and one Captain of the Royal Service. The present Master is H.R.H. the Duke of Edinburgh, K.G., K.T., &c., and a Captain in the Royal Navy; his Deputy is Captain Frederick Arrow.

The Scotch and Irish Light-houses are under the management of distinct Light-house Boards, with whom the Trinity House co-operates.

The public general light-houses of Scotland are under the Management of the '*Commissioners of Northern Light-houses*,' incorporated as such in 1786. The Commissioners, twenty-eight in number, are the Lord-Advocate and the Solicitor-General for Scotland, the Provosts and senior magistrates of Edinburgh and Glasgow, the Provosts of Aberdeen, Inverness, Campbeltown, Greenock and Dundee, and the Sheriffs of the maritime counties. In all matters relating to the construction of Light-houses and Light-house apparatus, and in all engineering questions, they are advised by Messrs. D. and T. Stevenson, Civil Engineers, of Edinburgh.

In 1810 the management of the light-houses of Ireland was vested in '*The Corporation for preserving and improving the Port of Dublin*,' which is composed of the seventeen members, approved by the Lord-Lieutenant of Ireland, and of the Lord Mayor, High Sheriff, and three Aldermen of the city of Dublin. Under a recent Act of Parliament, this Board is now styled *the Port of Dublin Corporation*.

The Trinity House has, at present, on the coasts of England and Wales, 79 light-houses, 38 light-vessels, and about 500 buoys and beacons; and employs about 850 persons in their management. There are also in Scotland 58 light-houses, 112 buoys, and 42 beacons; and in Ireland, 72 light-houses, 5 light-vessels, and 77 buoys and 63 beacons.

Of the objects exhibited by the Trinity House two may be particularized; one the Magneto-Electric Light, the other the Rock Light-house, as exemplified in the construction of 'The Bishop.'

THE MAGNETO-ELECTRIC LIGHT.

The Light on Dungeness (a point of land on the southern coast of Kent), is one of the most prominent marks for the guidance of

mariners in the Eastern part of the English Channel. Since the sixteenth century, a sea-light has been exhibited from that site, and for many years preceding 1862, a fixed bright light was maintained therein by means of eighteen Argand lamps, with paraboloidal reflectors. The importance of the position, and the comparative facilities of access to it by land and by sea, led to its being selected by the Trinity House for the first permanent exhibition of the magneto-electric light.

This being the first application of electricity to light-house illumination, and the commencement of a new chapter in the science of Pharology, it will be expected that some account should be given of the manner in which this wonderful power of nature has been manipulated, step by step, until the glorious illumination now exhibited from Dungeness tower has been brought to perfection,

Propositions had been made by several persons, at different times, for adopting electric illumination in light-houses; but in all there had existed one special grave cause of objection, namely, that the electricity was to be generated by galvanic or by voltaic batteries. The difficulty and expense of maintaining the necessary supplies for producing the light, and the offensive gases which were evolved in the chemical process, were serious practical objections; and even if these could have been overcome, the light produced was so varied and unsteady as to render it quite inapplicable to light-house illumination.

It had been discovered by Faraday, in 1831, that when a piece of soft iron, surrounded by an insulated metallic wire, was passed by the poles of a magnet, an electric current was produced in the wire, which could be exalted so as to give a spark. But it was not until 1854, that this discovery was turned to practical account, although magneto-electricity was used by chemists in various ways. Six magneto-electric machines (which had been constructed in London) were at that time being used in Paris for experiments in the decomposition of water, with the object of producing gas. The experiments proving unsuccessful, Professor Holmes of London was consulted, and undertook to improve the machines. While so doing, he discovered that not only a spark, but a continuous flame, could be produced and maintained by magneto-electricity. This was done while the machines were at the Hotel des Invalides in December 1854.

Communicating his discovery to Lord and Lady Howard de Walden, on whose behalf he was acting, they at once authorised him to construct, at their expense, a machine calculated to produce the electric light. This he completed at a factory in the Rue Fontaine St. George, in Paris, in the early part of 1855. Another machine was constructed in the same year, at Brussels, according to Professor Holmes' designs, and the experiments were considered so satisfactory that the view was

entertained of applying the principle to light-house illumination.

In February, 1857, Professor Holmes applied to the Corporation of Trinity House for permission to exhibit before them his patent invention for maintaining a very superior and intense electric light, which he described as 'reduced to so simple a process—no acids being required, nor any complicated machinery—that it might be adapted with safety and economy to light-houses on our coasts.' The required permission having been granted, the light was exhibited from the Trinity House Experimental Lantern at Blackwall, and was very favourably reported upon by Professor Faraday and a Committee of the Elder Brethren.

So successful was this exhibition that the Trinity House at once acceded to the inventor's proposition for a practical trial in a light-house: advised by Professor Faraday, and conferring with Professor Holmes, they made careful provision against any possible casualty, and arranged for a probationary exhibition, for two months, from the South Foreland. From that station, on December 8, 1857, the electric light was first exhibited as a guide to mariners.

A further probation of six months was then agreed upon, during which the apparatus was entirely under the control and management of the Trinity House itself, in order that the Elder Brethren might assure themselves of the practicability of maintaining the light. The apparatus was then removed from the South Foreland to Dungeness, and, provision having been made for restoring the old oil light in case of accident, the electric light was there permanently established, and its exhibition commenced on June 6, 1862. It may be added, that the long practical trial which it has since undergone, justifies its being adopted in other light-house stations, which is now about to be done.

Except in the arrangement of the driving gear, the magneto-electric apparatus employed at South Foreland, and afterwards installed at Dungeness, was similar in construction to that now exhibited. The machines consist each of six brass wheels, every wheel having sixteen helices, or bobbins, of insulated copper wire at equal distances around its circumference. Inside of each helix is placed a hollow core of soft iron. The six wheels are all firmly fixed on a shaft, which is driven by the steam-engine; and in turning, every core of each wheel is brought between two opposite poles of two magnets *at the same instant*; on continuing the rotation of the wheels, each core leaves, or quits, each pair of poles *at the same instant*. That these two essential conditions may be fulfilled, the horseshoe magnets are placed in rings of eight in each ring, with their sixteen poles in the same plane pointing inwards, towards the axle, and so adjusted that the distance from centre to centre of the poles is exactly equal to the distance from centre to

centre of the cores of the helices, sixteen in each wheel. The magnets are so arranged that, whether counting the poles around one ring, or counting longitudinally through the seven rings, the poles are alternately north and south poles.

Thus the iron core of any helix has its magnetism reversed sixteen times during one single revolution of the wheels. It is this reversing of the magnetism in the iron cores which induces a current of electricity in the helices; so that each helix and magnet is a small machine in itself, as each produces a current of electricity; and the whole machine is merely a combination of these separate currents, so as to produce a current of sufficient intensity to pass between the separated carbon-points of the lamp, and at the same time in sufficient quantity to produce a powerful light.

To accomplish these two ends in view, the helices of each separate wheel are connected one with the other throughout, and the two terminals of each of the six wheels are connected with two conductors leading to two insulated rings fixed on the shaft of the machine. Hence the compound current is carried off by brushes, made of brass or copper wires, in connection with the wires leading to the lantern.

In each machine there are ninety-six helices and fifty-six magnets.

In the magneto-electric machines the intensity of the current depends on the length of wire throughout the connected series of helices. The quantity of electricity depends on the quantity of magnetism induced in the soft iron cores, and on the velocity with which this quantity is taken up at each reversal of the poles. But it is found that the soft iron requires a certain time to become saturated, and if less time than this is allowed, it will not take up its full quantity. This it is that limits the speed of the machine. It has been found by experience that, with cores of the same weight as those in the machines now exhibited, 6,400 changes in the polarity per minute give the best result.

That the quantity of magnetism taken up by the soft iron cores may be as great as possible, the essential points are, that the magnets should be powerful, and that the cores of the helices should pass, in rotating, as near to the poles as possible without touching. In these machines the distance between the ends of the cores and the faces of the poles of the magnets is less than a millimetre. To preserve this distance great care is taken in adjusting and firmly fixing the magnets; for at the high speed of the machines—400 revolutions per minute—a stoppage of the light might occur, should a magnet be displaced. The same may be said of the helices. To prevent such an accident the helices are all doubly bolted throughout each series, from end to end of the machine; and the helices are retained firmly in their places by the cores being fixed in two flanges which are bolted on to the periphery of

each wheel, and through which the ends of the cores pass, and are flush with the external surface.

Thus it is evident that no wood or similar substance can with safety be employed to retain either magnets or helices in their places; for a change of humidity would disarrange all, and endanger the destruction of the machine. The expense, therefore, of mounting them entirely in brass, although it may at first appear excessive, is justified by the certainty secured for the light, and by the avoidance of expenses for repair. There have been no repairs required either by the magneto-machines or by the lamps since their first establishment in Dungeness.

The electricity, by means of the wires, arrives in the lantern. For fixed lights, two small lenses would be used, as at Dungeness, one fixed vertically over the other. Two regulators, or lamps, are employed for each lens, and these regulators are arranged on two travelling platforms, in such a manner that a mere touch is sufficient to withdraw one regulator and to slide another into its place.

The construction of the lamp, though simple, would be difficult to describe, without drawings, in the limited space of a catalogue. And since Professor Holmes is himself at hand in the Exhibition Building, and ready to explain the action of the apparatus to enquirers, a detailed description is the less necessary.

The beautiful machines now exhibited are intended for a light-house on the English coast, where they will be a lasting monument of the discoveries of Faraday and Holmes, the enterprise of the promoters, and the honour of England, the nation which has given this great benefit to the world.

ROCK LIGHT HOUSES.

The Bishop Rock Light House stands upon a rock about 30 miles from the main land of the coast of Cornwall, and five from St. Agnes, the westernmost island of the Scilly group. The rock, which is only 192 feet in extreme length, by 60 feet at its greatest breadth, is covered at high water, with the exception of one of its three pinnacles, (which from their fancied resemblance to a mitre have given it the name of 'Bishop,') and is exposed to the full force of the Atlantic wave. The tide rises here to a height of 16 feet, and as it was necessary to commence the lowest portion of the foundations at one foot below low-water spring-tides, it will be seen that the engineering difficulties to be encountered in the erection of a light-tower here were of no mean order. Indeed, one tower erected upon this site, on cast iron-piles, was washed away when on the eve of completion during a storm in the winter of 1847.

The designs for the present structure were by the late James Walker, Esq., then engineer to the Corporation of Trinity House, and the work was carried out under his directions by

Mr. Nicholas Douglass, their superintending engineer, who from his experience in the service in difficult and hazardous works, was selected as peculiarly fitted for carrying out such an undertaking.

The surface uncovered at low water being only 828 square yards, the whole of the masonry was prepared and fitted at St. Mary's Island, six miles distant, and fixed at the rock at such times as tide and weather would permit. A steam-tug, a cutter, and three stone barges were employed in this service.

The first stone (one of the 5th course) was laid on July 14, 1852, and the lowest stone is one foot below low water. The first complete course is one foot below high water. Built of Cornish granite from the Carnsew quarries near Penryn, the tower is solid up to twenty-three feet above high water, at which point the internal well-staircase commences. Twenty-three feet higher is the floor of the first room. The whole of the stonework was completed on August 28, 1857.

With constant vigilance, perseverance and courage, Mr. Douglass through the long period of seven years, worked patiently on to the completion of his task. It was only during the summer months, from March to October, that a landing could be made and held on the rock, and even then it often happened that an hour's work would be the most that could be done

after waiting many weeks for an opportunity. The sudden and dangerous rising of the sea on that coast rendered great precaution necessary to preserve the lives of the workmen, and it is not the least striking and satisfactory item in the success of this undertaking, that the whole was completed from first to last without loss of life or limb to any of the men engaged in its construction.

Since the erection of the 'Bishop' another stone light-tower of similar construction has been built, under circumstances of equal difficulty, upon the 'Smalls' rock off the coast of Wales, under the superintendence of Mr. James N. Douglass, now engineer to the Corporation. At the present time a light-house, of which a working model is exhibited, is in course of construction on the Wolf Rock, under the superintendence of Mr. William Douglass. Indeed to Mr. Nicholas Douglass and his two sons, James and William, may be attributed the practical success of some of the greatest triumphs of modern marine engineering.

The light, which is 110 feet above high water, was first exhibited on September 1, 1858, and it may be cited as an instance of the strength of the seas encountered there, that during a gale on January 30, 1860, the Bell on the Lantern Gallery, 100 feet above high water, was broken from its frame by a tremendous wave which passed completely over the Light House.

RENNIE, J. & G., 6 Holland-street, Blackfriars-road, London; Thames-street and Roan-street, Greenwich.

Marine Engineers and Shipbuilders.

High-pressure engine for steam launch, with surface condenser, exhibited among the Admiralty engines, Class 66. This description of engine is the first launch engine to which a surface condenser has been applied, on account of the rapid deterioration of the boilers of steam launches in the British Navy, and after several months' use, the boiler of launch No. 10, attached to H.M.S. 'Hector,' is now as clean and in as good order as when first made use of. Similar launch engines have been supplied to the British, Spanish, and Brazilian Navies, and also to one of the River Plate Governments, and of the launch engines ordered at the same time for the British Navy that with the surface condenser made by MESSRS. J. & G. RENNIE produced the greatest speed, viz.:—8·054 knots, on trial at Stokes Bay.

The following works have lately been carried out by this firm:

Two iron-cased armour-clad double or twin-screw vessels for the River Plate. Models exhibited in Class 66.

Two floating docks for the Spanish Government at Cartagena and Ferrol. Model exhibited in Class 66.

Dredging machines for India, Mauritius, Aden, Australia, and Russia.

Marine steam-engines with surface condensation and superheating apparatus for the Peninsular and Oriental Company, the Euphrates, India, and Egypt.

Steam jib cranes for Keyham and Woolwich Dockyards.

Double or twin-screw high-pressure gun-boats for the Spanish, East Indian, and Russian Governments. Models exhibited in Class 66.

Caissons for docks, for the English, Austrian and Spanish Governments.

Land engines with double cylinders, Woolf's system, and pumping engines for the Royal Mint, Australia, and London Docks, and Woolwich Arsenal. Engraving exhibited in Class 66.

Wrought-iron gun-carriages for service at Callao, Peru.

Centrifugal pump for Keyham Dockyard, 11 ft. 6 in. diameter.

Saddleback barges for the new fortifications at Bombay, India.

MESSRS. J. & G. RENNIE, with their recent improvements in the Euphrates steamer 'Dijleh,' have succeeded in diminishing the consumption of fuel to 2·4 lbs. per indicated horse power.

CLASS LXVI. a.

HER MAJESTY'S SECRETARY OF STATE FOR WAR,
WAR DEPARTMENT, LONDON.

HEAVY ORDNANCE, FIELD GUNS, SMALL ARMS, CAMP EQUIPAGE, ETC.

1 12-INCH WROUGHT-IRON MUZZLE-LOADING-
WOOLWICH RIFLED GUN, fitted with ele-
vating arc, tangent, and trunnion sights, also
top, fore and hind sights. Built up with cast-
steel tube, forged breech piece, trunnion
rings, and 8 coils of fibrous wrought-iron.

Weight 470 cwt. = 23,865 kils.
Breech preponderance . . . nil.

Length over all . 171"·5 = 4^m·356

„ of bore . 145"·0 = 3^m·683

Number of grooves 9

Width of „ 1"·500 = 38·10 mill.

Depth of „ 0"·200 = 5·08 „

Spiral increasing from 1 turn in 1200" =
30^m·48 or 100 calibres, to 1 turn in 600"
= 15^m·24 or 50 calibres.

Charge 70 lbs. = 31·75 kils.

Projectile . . . 600 „ = 272·1 „

V 1,240 feet = 378 metres

Mounted on a wrought-iron Casemate Carriage
and Platform, fitted with Armstrong's self-act-
ing compressor (9 plates, 118" long.)

CARRIAGE, Weight 51 cwt. = 2590 kils.
The sides of the platform of fish-belly form,
19"·5 (= 495·3 mill.) deep in centre, and
10"·0 (= 254·0 mill.) at the ends.

Length 180" = 4^m·572

Weight 75 cwt. = 3808 kils.

Slope, 5°. Height to centre of gun 5 feet.

Equipped for land service.

SCALE $\frac{1}{4}$ INCH TO 1 FOOT.

SECTION OF GROOVE
(FULL SIZE)

2 9-INCH WROUGHT-IRON MUZZLE-LOADING-WOOLWICH RIFLED GUN, fitted with elevating arc, tangent, and trunnion sights, also top fore and hind sights. Built up with cast-steel tube, forged breech piece, trunnion ring, and 8 coils of fibrous wrought-iron.

Weight	241·2 cwt.	=	12,247 kils.
Breech preponderance	nil.

24 SECTION OF TARGET, representing *Bellerophon* construction, full size

25 SPECIMENS of the military clothing of each of the Services in the British army

26 AMBULANCE WAGON on steel springs, with moveable sides and ends, fitted to hold 8 persons (6 sitting, and two on stretchers).
 Weight . . 14·7 cwt. = 746·4 kils.

27 MEDICAL CART on steel springs, with moveable sides, fitted with boxes.
 Weight . . 20 cwt. = 1016 kils.

28 STRETCHER, for field service and surgical operations.

29 CASE, containing specimens of wrought iron. Royal gun factories

30 WROUGHT-IRON SHIELD for land defence, rolled by John Brown & Co., Sheffield, July, 1864. This is a portion of a plate which weighed 20 tons, and was 21 inches (533 mill.) thick before rolling. Material, best Yorkshire and Derbyshire cold blast iron, with a mixture of foreign pig iron. Thickness, 13"·5 (343 mill.). This plate was fired at from a distance of 200 yards with steel shot of 7", 8" and 9" calibre, weighing respectively 115 lbs., 150 lbs. and 220 lbs., but with charges reduced to represent distances of 600 and 1000 yards.

31 WROUGHT-IRON PLATE, rolled by the Millwall Iron Works Co., September, 1863, for H.M.S. *Bellerophon*, and selected for experiment on a target representing that vessel.

Length . . . 20' 9" = 6^m·32
 Width . . . 4' 3" = 1^m·30
 Thickness . . . 6"·0 = 152·4 mill.
 Weight . . . 188 cwt. = 9546 kils.

It exhibits the effects of 18 projectiles, varying in weight and power, from a Whitworth 70 pdr. to a spherical 10"·5 steel shot of 169 lbs (76·6 kils.). The actual penetrations are all produced by 7" shot of about 115 lbs. (52 kils.) of steel, or iron cast in chill (Palliser shot).

5 Two-stalled stable

THE WHITWORTH COMPANY (LIMITED).—*Works, 44 Chorlton-street, Manchester;
London Office, 28 Pall Mall, s.w.*

Manufacturers of the 'Whitworth' Patent Rifled Steel Ordnance and Ammunition, for
Naval, Siege, or Field Guns.

Also of 'Whitworth' Rifled Small Arms.

70-pounder Rifled Gun on Broadside Carriage.

12-pounder Field Gun, with Carriage and Limber.

Patent 'Whitworth' Steel, for Guns or Steel Projectiles, and 'Whitworth' Case Shot.
Sole Makers of Boxer's Patent Shrapnel Shell and Time Fuzes.

ARMSTRONG, SIR W. G., & CO., *Elswick Works, Newcastle-on-Tyne, England.*

(A). A wrought-iron 12½-ton 9-inch muzzle-loading rifled gun, constructed throughout on the coil system, and mounted on a wrought iron carriage and slide.

The gun is rifled according to the "Woolwich" method used for similar guns, in H.B.M.'s service.

The projectiles weigh 250lb., and the full charge of British service powder weighs 43lb.

The gun and carriage have been proved at sea, and according to the British service rule of proof.

The carriage and slide weigh together 4½ tons. The compressor for checking recoil is wholly of iron, and is thrown in and out of action by a lever handle, placed on one side of the carriage, which acts of itself if neglected, and serves also to control the motion of the gun when running in or out in a seaway. The degree of compression is adjusted by a regulating lever handle, placed on the opposite side of the carriage.

The general construction of the gun, carriage, and slide, as originated by Sir W. Armstrong and Co., is now adopted for H.B.M.'s land and sea service.

The wooden framework represents the section of an iron-clad frigate, and exhibits the mode of fixing and working the gun in a broadside port.

(B). A 3-in. muzzle loading rifled field gun, weighing 9 cwt., constructed with a steel barrel reinforced by superimposed coils of wrought iron, and mounted on a carriage with a limber attached, both wholly of wrought iron.

The gun is rifled upon the 'shunt' method, used for the 4-ton 6·3-inch m. l. guns of H.B.M.'s service.

The projectiles weigh 12 lb. and the service charge 1½ lb.

Gun carriage, limber, ammunition, and equipments complete, weigh in all 37½ cwt.

The wheels may be taken to pieces, and the various parts replaced by screwing.

(C). Specimens and sections of various projectiles and fuzes, with other ordnance accessories.

(A). Un canon rayé se chargeant par la bouche, en fer forgé, pesant 12½ tonnes—12,688 kilogr.—et du calibre de 9 pouces—0 m. 23 c.—construit en entier d'après le système à rubans, et monté sur affût et coulisse de fer forgé.

Ce canon est rayé d'après la méthode en usage à l'Arsenal de Woolwich pour les pièces semblables du service de Sa Majesté Britannique.

Le poids des projectiles est de 250 livres—123 kilogr. 500—et celui de la pleine charge de poudre du service anglais de 43 livres—19 kilogr. 522.

Ce canon et son affût ont été éprouvés en mer, et selon les conditions d'épreuve du service anglais.

L'affût et la coulisse pèsent ensemble 4½ tonnes—4,568 kilogr. Le comprimeur destiné à amortir le recul est entièrement en fer, et est mis en action ou au repos par un bras de levier placé sur un côté de l'affût, qui agit de lui-même s'il est négligé, et sert aussi à contrôler le mouvement du canon alors qu'il s'avance ou recule dans le roulis. Le degré de compression est ajusté par un bras de levier régulateur, placé sur l'autre côté de l'affût.

Le système de construction générale de ce canon, des affût et coulisse, tel qu'il a été initié par Sir W. ARMSTRONG ET CIE., est maintenant adopté pour le service de la marine et de l'armée de Sa Majesté Britannique.

La charpente en bois représente une section d'une frégate cuirassée, et montre la manière de fixer et manœuvrer le canon dans un sabord de bordée.

(B). Une pièce de campagne rayée se chargeant par la bouche, du calibre de 3 pouces—0 m. 7·554 c.—(pesant 9 cwt.—458 kilogr.) construite avec âme en acier, renforcée par des rubans superposés de fer forgé, et montée sur affût avec fourgon, l'un et l'autre entièrement en fer forgé.

Ce canon est rayé d'après le 'shunt system' en usage pour les pièces de 4 tonnes—4,030 kilogr.—et 6·3 pouces—0 m. 16 c.—de calibre du service de Sa Majesté Britannique.

Les projectiles pèsent 12 livres—5 kilogr. 449—et la charge de service 1½ l. 0 k., 795 gr.

Affût, fourgon, munitions et équipement complet pèsent en tout 37½ cwt.—1,905 kilogr.

Les roues peuvent se démonter en plusieurs pièces et leurs différentes parties se remettre en place au moyen de vis.

(C). Spécimens et sections de divers projectiles et fusées, avec autres accessoires d'artillerie.

ARMSTRONG, SIR W. G., & CO., *Elswick Works, Newcastle-on-Tyne, England.*

(A.) Eine gezogene Kanone von gehämmertem Eisen, 12½ Tonnen Gewicht, 9zöllige Mündung, von vorn zu laden, und durchgehend nach dem 'Coil System' gearbeitet; das Gestell und die Gleitbahn sind gleichfalls von gehämmertem Eisen.

Diese Kanone ist, wie ähnliche in Woolwich behandelt werden, gezogen und genau wie die in der Artillerie Ihrer Britischen Majestät im Gebrauche.

Die Geschosse wiegen 250 Pfund, und die volle Ladung von Britischem Ordonnanz-Pulver wiegt 43 Pfund.

Diese Kanone in ihrer gegenwärtigen Beschaffenheit wurde an Bord eines Schiffes nach den Vorschriften der Britischen Admiralität practischen Versuchen unterworfen.

Das Gestelle und die Gleitbahn zusammen wiegen 4½ Tonnen. Die Vorrichtung zur Verminderung des Zurückprallens ist ganz von Eisen, und wird durch ein besonderes Hebeeisen gehandhabt, welches der Art an der Seite angebracht ist, dass es von selbst die nöthige Wirkung hervorbringt, sollte ein Versehen stattfinden; durch dieselbe Vorrichtung wird auch das Hin- und Herrollen des Geschützes bei hoher See überwacht. Die Stärke des so bewirkten Druckes wird durch ein Hebeeisen bestimmt, welches an der entgegengesetzten Seite des Gestelles angebracht ist.

Die allgemeine Construction dieses Geschützes, und welche von Sir W. ARMSTRONG & Co. ursprünglich erfunden worden ist, wird jetzt in der Armee und Marine Ihrer Britischen Majestät angewendet.

Das hölzerne Gerüst stellt die Durchschnittsseite einer gepanzerten Fregatte und die Art und Weise vor, wie Kanonen an der Breitseite aufgestellt und bedient werden.

(B.) Eine 3zöllige gezogene von der Mündung ladbare Feldkanone, 9 Centner wiegend; der Lauf ist von Stahl, durch Lagen von gehämmertem Eisen verstärkt; das Gestell und der Protzwagen sind ausschliesslich von gehämmertem Eisen.

Dieses Geschütz ist nach der 'Shunt'-Methode gezogen, wie dies mit allen von 4 Tonnen, 6,3 Zoll, an der Mündung ladbaren Geschützen in den Arsenalen Ihrer Britischen Majestät erzeugten Geschützen der Fall ist.

Die Geschosse wiegen 12 Pfund und die vorgeschriebene Ladung 1¼ Pfund.

Gestell, Protzwagen, Munition und Zugehör wiegen in allem 37½ Centner.

Die Räder können zerlegt und die etwa ersetzt werden müssenden Stücke mit Schrauben befestigt werden.

(C.) Muster und Theile von verschiedenen Geschossen, Zündern und anderen Artillerie-Gegenständen.

(A.) Cannone di ferro battuto di 12½ tonnellate, da 9 pollici, caricabile dalla bocca, rigato costruito, interamente sul sistema del tortiglione e montato su affusto e piattaforma in ferro battuto.

Il cannone è rigato secondo il metodo usato a Woolwich per simili cannoni pel servizio Reale.

I proiettili pesano 250 lbe. e la carica regolare colla polvere del servizio Britannico pesa 43 lbe.

Il cannone e l' affusto sono stati provati sul mare, e secondo la regola di prova del servizio Britannico.

L' affusto e piattaforma insieme pesano 4½ tonnellate. Il compressore per impedire il rinculo è interamente di ferro ed è messo in azione o in riposo da un manubrio a leva situato da un lato dell' affusto, che agisce da sè anche se trascurato, e serve anche a regolare il movimento del cannone nello scorrere innanzi e indietro col moto del mare. Il grado di compressione è aggiustato da manubrio a leva regolatore, posto al lato apposto dell' affusto.

La costruzione generale del cannone, affusto e piattaforma come proposta da Sir W. ARMSTRONG & CIA., è adesso adottata pel servizio Reale di terra e di mare.

L' intelaiatura in legno rappresenta la sezione di una fregata corazzata, e dimostra il modo di piantare e manovrare il cannone in una cannoniera di fiancata.

(B.) Cannone da campagna rigato da 3 pollici caricabile dalla bocca, pesante 9 cantara, costruito con una canna d'acciaio rinforzata da tortiglione sovrapposto in ferro battuto, e montato su d' un affusto con avantreno annesso interamente di ferro battuto.

Il cannone è rigato sul metodo detto 'shunt,' come usato pei cannoni da 4 tonnellate 6-3 pollici caricabili dalla bocca, del servizio Reale.

I proiettili pesano 12 lbe. e la carica di servizio 1¼ lba.; affusto, avantreno, munizione, ed equipaggiamento completo pesano in tutto 37½ cantara.

Le ruote possono smontarsi in pezzi, e esser rimesse insieme a vite.

(C.) Campioni e sezioni di vari proiettili e spolette con altri accessori d' artiglieria.

GROUP VII.

CLASS LXVII.

CHAMBERLIN, JAMES, 1 Post-office-street, Norwich, England.

Aromatic Spanish Meal, for Rearing and Feeding Pheasants.
'Spanish Meal' Aromatique, pour Elever et Nourrir les Faisans.

ENGLISH PRICE.

35s. the hundred weight, delivered free at Great Eastern Railway Station, London. Casks included. Cash must accompany order.

The wonderful success attending the use of my Spanish meal for feeding pheasants induces me to say that for years it has been my desire to introduce a food which would not only add strength and development to the newly hatched birds, but prevent all diseases; and I am happy to state, from numerous letters I hold from noblemen and gentlemen, my efforts have been crowned with triumphant success.

It is to be noted that many gamekeepers have their prejudices, and prefer using ants' eggs, maggots and flesh, even in a putrid state. Can this be good? decidedly not! it is the precursor of all diseases to which pheasants are subjected.

Aromatic Spanish meal contains the most nutritious boiled meat, fragrantly spiced, ground down by powerful machinery, and so judiciously blended that the long-sought desideratum of feeding and keeping the stomachs of the birds warm is accomplished, creating a stamina which repels the chills and damps of early summer.

Agent in Paris—MR. D. H. BRANDON,
Civil Engineer, 13 Rue Gaillon.

On receipt of five stamps, Mr. Chamberlin will send, post free, a book with instructions to rear and feed pheasants, partridges, &c., with numerous opinions of the excellent qualities of Spanish Meal.

Zoological Society of London, Regent's Park, N.W.,
September 10, 1866.

Sir,—I have much pleasure in bearing testimony to the *excellent qualities* of your 'Spanish Meal,' which has been used for some time past in feeding the very valuable collection of *Indian, Chinese, and other pheasants* in the gardens of this society, with the most *satisfactory results*.

I remain, sir, yours truly,

A. D. BARTLETT, Superintendent.

PRIX FRANÇAIS.

40 f. les 50 kilog., livrés sans frais à la Station de la Ligne du Nord à Paris. Fût compris. L'argent doit accompagner le commande.

Le succès prodigieux qui résulte de l'emploi de mon 'Spanish meal' pour nourrir les faisans, m'engage à constater que pendant plusieurs années j'ai éprouvé le désir d'introduire une nourriture qui non seulement donnât de la force et du développement aux oiseaux nouvellement éclos, mais qui prévint toute espèce de maladie; et je suis heureux de certifier par les nombreuses lettres que j'ai reçues des plus hauts personnages, que mes efforts ont été couronnés d'un succès complet.

Il est à remarquer que beaucoup de gardes-chasse ont leurs préjugés, et qu'ils préfèrent employer des œufs de fourmis, des mites, et de la viande, même dans un état de putréfaction. Cela peut-il être bon? certainement non; cela ne peut être que l'avant-coureur des maladies auxquelles les faisans sont sujets.

L'aromatique 'Spanish meal' contient de la viande bouillie la plus nutritive, épicée agréablement, moulue par une très puissante machine, et si judicieusement mélangée, que le moyen si longtemps cherché de nourrir les jeunes faisans, et d'entretenir la chaleur dans leurs estomacs, est enfin trouvé. Le 'Spanish meal' crée une force intérieure qui résiste au froid et à l'humidité des premiers jours d'été.

Agent à Paris—M. D. H. BRANDON,
Ingénieur Civil, 13 Rue Gaillon.

En recevant cinquante centimes de timbres-poste, M. Chamberlin enverra franco un livre contenant les instructions nécessaires pour élever et nourrir les faisans, les perdrix, etc., avec les nombreuses attestations des excellentes qualités du 'Spanish Meal.'

Société Zoologique de Londres, Regent's Park, N.W.,
le 10 septembre 1866.

Monsieur,—C'est avec le plus grand plaisir que je constate les *excellentes qualités* de votre 'Spanish Meal,' qui a servi depuis quelque temps à nourrir la très-précieuse collection de *faisans indiens, chinois, et autres*, dans le jardin de la dite société, avec les *résultats les plus satisfaisants*.

Croyez-moi, etc.,

A. D. BARTLETT, Surintendant.

SCIENCE AND ART DEPARTMENT, SOUTH KENSINGTON, LONDON.

ILLUSTRATIONS OF THE FOOD DIVISION OF THE SOUTH KENSINGTON MUSEUM.

Substances showing the composition of a healthy human body, weighing 11 stones, or 154 pounds.

Series illustrating the daily supply and waste of a healthy working man, weighing 11 stones, or 154 pounds.

Heat-giving, flesh-forming, and mineral substances, in various kinds of animal and vegetable food.

Substances illustrating the comparative composition of eleven different kinds of vegetable food.

Substances illustrating the comparative composition of twelve different kinds of animal food.

Series of thirteen cases, representing the chemical analysis of the following articles of diet, namely:—Wheat, Bran, and Oats, Beans and Peas, Rice and Lentils, Potatoes and Carrots, Grapes and Gooseberries, Tea and Cocoa, Coffee and Tobacco, Milk, three kinds of Meat, three kinds of Fish, Beers, and Wines.

Series of mounted specimens, illustrating the varieties of Hares and Rabbits, indigenous to Great Britain. In a glazed case.

Series of mounted specimens, illustrating the varieties of Pheasant, which have been introduced into Great Britain. In a glazed case.

Series of mounted specimens of Grouse, Ptarmigan, and Capercailzie, in illustration of the Game Birds of Great Britain. In a glazed case.

Stuffed heads of the following breeds of Oxen:—The Hereford, Short Horn, Long Horn, Polled Angus, Scotch Runt, and Gallo-way.

Models in wax of a Horse's Tongue and a Bullock's Tongue.

Illustrations of diseased meat.

Seven mounted specimens of different species of Crabs and Lobsters, illustrating edible crustacea.

Series illustrative of the development of the common Oyster.

Selected substances used in the adulteration of different kinds of Food.

A cheap and easily prepared Filter, called 'The Poor Man's Filter.'

A series of 34 coloured drawings or diagrams illustrating the Edible and Poisonous Fungi of Great Britain.

Diagram of the Chemical and Physiological Classification of Food.

Diagram of the Dietetic value of various kinds of Vegetable Food.

Table of the Elements and Compounds of the Human Body.

Diagram showing the assumed average composition of entire Carcasses of Butcher's Meat.

Diagram showing the comparative consumption of Tea, Sugar, and Tobacco in certain countries named.

Forty-two printed descriptive Labels in glazed frames.

CLASS LXXII.

CORBETT, JOHN, *British and Imperial Salt Works, near Bromsgrove, Worcestershire, England.*

These works are amongst the most extensive in England. The purity of the brine springs from which this salt is manufactured insures an article beautiful in colour and fine in quality.

Shipping ports for exportation—London, Gloucester, Bristol, Hull, and other ports.

Offices in London—115 Lower Thames-street.

Ces salines se rangent parmi les plus vastes qui existent en Angleterre. La pureté des sources salées d'où provient le sel que manufacture J. Corbett, assure un article de couleur magnifique, et de la plus belle qualité.

Ports d'exportation—Londres, Gloucester, Bristol, Hull et autres.

Bureaux à Londres—115 Lower Thames-street.

Diese Salzwerke gehören zu den ausgedehntesten in England. Die Reinheit der Salzquellen, von welchen dieses Salz gewonnen wird, macht es möglich, einen Artikel zu produciren, welcher schön in Farbe und fein in Qualität ist.

Verladungshäfen für Ausfuhr: London, Gloucester, Bristol, Hull und andere Häfen.

Comptoir in London—115 Lower Thames-street.

Queste saline sono le più ampie in Inghilterra. La purezza delle sorgenti salse dalle quali si ottiene questo sale ne assicura un prodotto bellissimo per colore e qualità.

Porti di imbarco pell' esportazione—Londra, Gloucester, Bristol, Hull ed altri porti.

Ufficio in Londra—115 Lower Thames-street.

BURGESS, JOHN, & SON, 107 Strand (corner of the Savoy steps) and Savoy-street, Savoy-hill, Fountain-court, London.

Patented and other Preparations of the Gorgona Anchovies, Pickles, Sauces, &c.

stance même par une pression de 45 livres—20 kilogr. 430 gr.—par pouce carré—6,45 c. Ces conserves ont le mérite d'être immensément supérieures aux conserves de ménage, tant sous le rapport de la pureté que sous celui du bon goût.

Beigefügt ist eine Zeichnung von MAMFIELD's patentirtem Einmache-Apparat, kürzlich aufgestellt von Herren JOHN BURGESS &

Subjoined is a drawing of MAMFIELD's patent Pickling Apparatus lately erected by Messrs. JOHN BURGESS & SON, who are the sole licensees; it consists of a large air-tight chamber or receiver, capable of holding 100 gallons of vegetables, and is fitted with two sets of air-pumps for exhausting and condensing the air in the receiver, worked by an engine; a tank for vinegar is attached, as shown in drawing. The whole of the metal parts of the machinery with which the vinegar comes in contact has been made entirely of platinum. Atmospheric pressure is the great feature of this process. After the vegetables have been thoroughly exhausted of air and superfluous moisture the pickling vinegar is forced into the very substance of the vegetable at a pressure of 45 lbs. to the square inch. These pickles possess the merit of being far superior to home-made ones in point of purity and flavour.

SOHN, welche die einzigen Patent-Inhaber sind. Der Apparat besteht aus einer grossen luftdichten Kammer oder Empfänger, welcher 100 Gallonen Gemüse hält und mit zwei durch Dampf getriebene Luftpumpen zum Auspumpen und Verdichten der Luft in dem Empfänger versehen ist; ein Essigbehälter ist beigefügt, wie in der Zeichnung gesehen werden kann. Die metallenen Theile der Maschinerie, mit welchen der Essig in Berührung kommt, sind ganz aus Platina gemacht. Der hauptsächlichste Umstand dieses Verfahrens ist die Anwendung von Luftdruck. Nachdem die Gemüse völlig der Luft und überflüssigen Feuchtigkeit entleert worden sind, ist der Essig zum Einmachen in die Substanz der Gemüse, unter einem Druck von 45 Pfund auf den Quadratzoll, hineingetrieben. Diese Pickles besitzen den Vortheil, dass sie viel besser in Bezug auf Reinheit und Geruch als die in Hauswirthschaften zubereiteten sind.

Ci-jointe est une planche représentant l'appareil à fabriquer les conserves au vinaigre de MAMFIELD, breveté, récemment érigé par MM. JOHN BURGESS ET FILS, seuls cessionnaires du brevet; cet appareil consiste en une large chambre ou récipient imperméable à l'air, pouvant contenir 100 gallons des légumes à conserver—454 litres—et est muni de deux systèmes de pompes à air, mues par une machine à vapeur, qui épuisent et condensent l'air dans le récipient; à cette chambre est attaché, ainsi qu'on peut le voir dans la planche ci-dessus, un réservoir pour le vinaigre. Toutes les parties métalliques de l'appareil avec lesquelles le vinaigre peut se trouver en contact ont été entièrement fabriquées en platine. La pression atmosphérique constitue le caractère principal de ce procédé. Lorsque les légumes ont été complètement épuisés d'air et d'humidité surabondante, le vinaigre, destiné à les conserver est introduit de force dans leur sub-

Qui unito è un disegno dell'apparato patentato MAMFIELD's per preparare frutti in aceto, eretto recentemente dai Signi. JOHN BURGESS & FIGLIO, soli autorizzati dall'inventore. Consiste in un gran recipiente pneumatico della capacità di 100 galloni di frutti, ed è fornito di due sistemi di pompe ad aria per esaurire o condensare l'aria nel recipiente, attivate da un motore; annessa vi è una cisterna pell'aceto, come si vede nel disegno. Tutte le parti metalliche del meccanismo che vengono in contatto coll'aceto sono fatte interamente di platino. La pressione atmosferica è il gran distintivo di questo processo. Dopo che i frutti sono affatto esausti d'aria e di superflua umidità, l'aceto è spinto entro la polpa del frutto ad una pressione di 45 lbs. per pollice quadrato. Questi frutti hanno il merito di essere superiori ai casalinghi e per purezza e per gusto.

FRY, J. S., & SONS, *Bristol and London.*

Manufacturers of Chocolate and Cocoa.

Obtained Prize Medals at the International Exhibitions, London, 1851; New York, 1853; Paris, 1855; London, 1862; and Dublin, 1865. Manufacturers by Special Appointment to the Queen and Prince of Wales.

This manufacturing house has been established upwards of one century, and produces chocolate and cocoa in great variety, including the finest chocolate in tablets, and other forms; and cocoa adapted for general consumption. The business not only includes the preparation of these goods by powerful steam machinery, but also making them up into packages of all descriptions, in which department a large number of hands are employed.

J. S. FRY & SONS have had the honour of supplying the Royal Family for upwards of 100 years, and have received the appointments of Manufacturers to the Queen and Prince of Wales. The prize medals awarded, as stated above, are a gratifying proof of the position assigned by the most competent judges to the manufactures of this firm.

Several descriptions are especially adapted for exportation, and are carefully prepared so as to retain their freshness and delicacy for a long period. In many of the British Colonies these articles are well known and appreciated.

Ont obtenu des Médailles aux Expositions Internationales de Londres, 1851; New-York, 1852; Paris, 1855; Londres, 1862; et Dublin, 1865. Fournisseurs spéciaux de la Reine et du Prince de Galles.

Cette maison est établie depuis plus d'un

siècle, et fabrique une grande variété de chocolats et cacaos, y compris le chocolat le plus fin en forme de tablettes et autres; et aussi le cacao adapté à la consommation générale. En outre de la préparation de ces articles au moyen de puissantes machines à vapeur, la maison J. S. FRY ET FILS en fait aussi l'emballage en paquets et colis de toutes sortes, branche de leurs affaires qui occupe un nombre considérable d'ouvriers.

J. S. FRY ET FILS ont eu l'honneur de fournir la Famille Royale depuis plus de cent ans, et ont été nommés Fournisseurs spéciaux de la Reine et du Prince de Galles. Les médailles qui leur ont été décernées, ainsi qu'on l'a vu plus haut, sont une preuve satisfaisante de la position qui été assignée par les juges les plus compétents aux produits de cette maison.

Plusieurs sortes de ces produits sont fabriquées spécialement en vue de l'exportation et sont soigneusement préparés de façon à conserver longtemps toute leur fraîcheur et leur délicatesse. Ces articles, au reste, sont bien connus et appréciés dans nombre de colonies anglaises.

Erlangten Preis-Medaillen auf den internationalen Ausstellungen zu London, 1851; New York, 1853; Paris, 1855; London, 1862; und Dublin, 1865. Fabricanten (durch spezielle Ernennung) für die Königin und den Prinzen von Wales.

Dieses Fabrikhaus besteht seit über einem Jahrhundert und producirt Chocolate und Cacao in einer grossen Mannigfaltigkeit, worunter die feinte Chocolate in Tafeln und in anderer Form; ebenso den zu allgemeinem Verbrauch bestimmten Cacao. Das Geschäft umfasst nicht nur die Zubereitung dieser Waaren durch kraftvolle Dampfmaschinen, sondern auch die Verpackung derselben in Päckchen aller Arten, in welchem Zweige eine grosse Menge Leute beschäftigt werden.

J. S. FRY & SÖHNE haben die Ehre gehabt, die königliche Familie seit mehr als 100 Jahren zu versorgen, und sind zu Fabricanten für die Königin und den Prinzen von Wales ernannt worden. Die zuerkannten Preismedaillen, wie oben erwähnt, sind ein genügender Beweis für die von den kompetentesten Richtern den Fabricaten dieser Firm zuertheilten Stellung. Verschiedene Arten eignen sich besonders für Ausfuhr und sind sorgfältig zubereitet, so dass sie ihre Frischheit und Feinheit für eine lange Zeit bewahren. In vielen der Britischen Colonien sind diese Artikel wohlbekannt und werden hoch geschätzt.

Arrangements have been made for an extensive supply of these ales in the Refreshment Department of the Exhibition, so that intending purchasers may judge for themselves of their quality and condition.

Lists of prices can be obtained at any of S. ALLSOPP & SONS' Stores, as above.

MM. S. ALLSOPP ET FILS ont l'honneur de recommander à l'attention du public leur fameuse ale pour les Indes Orientales (*East India Pale Ale*), et d'annoncer que toute commande sera reçue soit à leurs bureau à *Paris, rue Scribe*, No. 3, soit à leur Brasserie, à *Burton-on-Trent*, soit enfin à leurs Dépôts ci-dessus mentionnés.

Des arrangements ont été faits pour un large assortiment de bières dans le Buffet de l'Exposition, de manière à ce que les personnes qui désireraient en acheter, puissent juger par elles-mêmes de leur qualité et de leur condition.

La liste des prix peut être obtenue à n'importe quel Dépôt de MM. S. ALLSOPP ET FILS.

GROUP VIII.

CLASS LXXV.

COTTAM & CO., *Iron Works, 2 Winsley-street (opposite the Pantheon), Oxford-street, London, w.*

Original Inventors of the Improved Stable Fittings and Harness Brackets (now so generally specified by Architects).

COTTAM & Co. have been awarded the Medals of the Great Exhibition, 1851; Paris, 1855; and the International of 1862, for progressive and general improvements in these Fittings, and for conservatories and carriage entrance gates in iron.

The model of stable exhibited, comprising the iron enamelled fittings, &c., a quarter the full size, for 2 stalls, and a loose box, of part of which the annexed engraving is an illustration. The cost of the fittings complete, full size and fixing, including the mangers, ramps, head stall plates, wood partitions, and lining, iron traps, gutter, and brick paving, averages about 100*l*.

Wrought iron ventilating brackets for hanging saddles, 14*s*. 6*d*., and single, 35*s*., and double, 60*s*., harness per set.

More detailed particulars of the above, and all other kinds of stable fittings in iron and enamel, in the illustrated catalogues, to be obtained gratis of the agent at the stand, and of the inventors, COTTAM & Co., 2 Winsley-street, Oxford-street, London, w.

COTTAM's patent portable united cow fittings, all iron, cheaper than wood not fixtures, removable at pleasure. For particulars, see COTTAM's Catalogue.

COTTAM'S patent effluvium interceptor trap, for preventing noxious gases and bad smells | entering dwelling-houses, hospitals, stables, &c., &c. from drains, sewers, cesspools, &c.

The cut represents a section of the interceptor trap, with the ordinary inlet and outlets for drain pipes. It is fixed close to the outer wall of the building, the receptacle for the water lute, is in two compartments, *a a*, into each of which a diaphragm or plate *b*, dips, and an intercepting chamber, *c*, is thus formed, by means of which the sewer gas, forcing a pas

sage, is caught and carried off, by a pipe *d*, to any convenient place for its escape. The intercepting chamber is provided with a box of charcoal, through which the gases permeate, and are rendered free of deleterious qualities.

For further explanation, see the model and trap exhibited, also pamphlet and testimonial.

COTTAM & Co., 2 Winsley-street (opposite the Pantheon), Oxford-street, London, W.
Manufacturers of all kinds of iron work, both plain and ornamental, for buildings and other purposes.

MUSGRAVE BROTHERS, *Ann-street Iron Works, Belfast.*

Prize Medal, International Exhibition, 1862, and of the Royal Agricultural Society of England, &c.

Médaille à l'Exposition Internationale de 1862, celle de la Société Royale d'Agriculture d'Angleterre, etc.

Exhibitors in Paris Exhibition both in Class 24, main building of the Exhibition, and Class 75, English building in Park.

MUSGRAVE'S PATENT STABLE FITTINGS, AND MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S patent fittings have been employed by H.R.H. the Prince of Wales for the new stables at Sandringham. Gentlemen are particularly requested to examine these inventions in the Paris Exhibition, as they are unlike those of any other maker, and were admitted to excel all of their class in the Exhibition of 1862. They can be seen in first-class stables in every county in England; and MUSGRAVE BROTHERS are now fitting several very large establishments under directions of London architects noted for employing only what is the best of its kind.

Les appareils intérieurs pour écuries, brevetés, de MUSGRAVE FRÈRES ont été employés par S.A.R. le Prince de Galles pour les écuries récemment construites à Sandringham. Messieurs les visiteurs à l'Exposition Universelle de Paris sont priés de vouloir bien examiner ces inventions, qui diffèrent de celles de tout autre fabricant et qui étaient considérées comme les meilleures de leur classe à l'Exposition Internationale de 1862. Elles peuvent être vues dans toutes les écuries de premier ordre dans chaque comté de l'Angleterre, et les Messieurs MUSGRAVE FRÈRES s'occupent dans ce moment de leur érection dans plusieurs grands établissements, sous la direction de certains architectes de Londres, bien connus pour ne pas employer que les meilleurs matériaux dans leurs constructions.

MUSGRAVE'S PATENT HARNESS BRACKETS (A NEW INVENTION),

These harness brackets, with polished wood cappings on iron framework, are very strong, yet have a light and handsome appearance; a free admission of air below quickly dries the stuffing. Each bracket is exactly the form of the article intended to rest on it, thus keeping the saddle or harness in proper shape, and preserving the leather from cracking.

Priced engravings sent post free on application to

Ces crochets pour harnais, avec pommes en bois poli sur un châssis en fer, sont d'une construction très-forte, avec néanmoins l'apparence de légèreté et de grâce; l'admission libre de l'air au-dessous du crochet rend la bourre bientôt sèche. Chaque crochet est de la forme exacte de l'article que l'on désire pendre là-dessus, et la selle ou le harnais étant ainsi retenu dans sa propre forme, évite tout dommage au cuir.

Planches, avec prix-courants, envoyées franco sur demande adressée à

Exhibited in Class 75, Paris Exhibition (the English building in the Park).

MUSGRAVE'S PATENT IRON COW-STALLS, AS USED IN THE GOVERNMENT MODEL FARMS.

These iron cow-stalls are perfect in their arrangements for feeding and ventilation; every part being of iron, they are indestructible, inexpensive, very compact, cleanly, and healthful for the animal. Should sickness occur, if the iron work be painted, and the walls washed with lime, they can neither harbour nor communicate contagion. This system, in fact, is found to be the only true safeguard against the spread of rinderpest or other epidemic.

Ces salles à vaches, en fer, sont d'une disposition parfaite, ne laissant rien à désirer tant à l'égard de la pâture que de la ventilation; étant construites entièrement de fer, elles sont indestructibles, peu coûteuses, très-compactes, propres, et convenables à tous égards pour assurer la santé des animaux. En cas de maladie quelconque, si la ferrure est peinte et les murs de l'écurie blanchies à lait de chaux, elles ne pourront ni loger ni communiquer la contagion. En effet, ce système a été trouvé le seul qui puisse fournir une défense efficace contre la propagation de la peste bovine ou d'aucune autre épidémie.

MUSGRAVE'S PATENT IRON PIGGERIES AND DOG KENNELS.

These piggeries are made entirely of iron, and may be moved about if necessary. The system of ventilation keeps the air always sweet. The troughs are easily cleaned, emptied, and refilled without disturbing the animal and an occasional coat of paint keeps them in good order.

Ces étables à porcs sont construits entièrement de fer, et, s'il soit nécessaire, peuvent être changés de place. La méthode adoptée pour leur ventilation rend l'air toujours pur. Les auges sont facilement nettoyées, vidées et remplies, sans incommode en aucune façon l'animal, et une couche occasionnelle de couleur les maintient en bon ordre.

MUSGRAVE'S PATENT SLOW COMBUSTION STOVE,
Exhibited at Class 24 in the Main Building, Paris Exhibition.

This stove is employed by the Ecclesiastical Commissioners, and is the nearest approach to warming by hot water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls, will burn day and night for weeks with little care. Capable of warming a large apartment for 24 hours, at a cost of 3d.; and deserving of special attention, because of its safety, healthfulness, durability, and extreme simplicity.

Priced engravings sent free on application to

Cette poêle est employée par les Commissaires Ecclésiastiques, et son opération se rapproche plus exactement que celle d'aucune autre au chauffage par l'eau chaude. Elle s'adapte bien au chauffage des églises, étant capable d'entretenir un feu du samedi jusqu'au dimanche soir sans qu'on la soigne durant les heures du service divin. Dans les vestibules elle brûlera jour et nuit pendant plusieurs semaines, n'exigeant que bien peu de soin de la part des domestiques. Elle chauffera un appartement assez large durant 24 heures, au coût de 30 c. seul, et étant sûre, saine, durable, et simple dans son opération, elle mérite une attention spéciale.

Planches, avec prix-courants, envoyées franco sur demande adressée à

MUSGRAVE BROTHERS, Ann-street Iron Works, Belfast.

Neue patentirte B B Mähmaschinen für Ziergrasplätze, verbesserte verzinkte Drahtnetze, verzierte Drahtverzäunungen.

J. B. BROWN & Co.'s New Patent Lawn Mower combines all the latest improvements in lawn-mowing machines, being simple in construction, very light, silent in movement, easily worked, and so strong and durable as to be literally unbreakable—an all-important feature in machines of this class; the ordinary cast-iron being entirely done away with, and malleable iron substituted in all breakable parts, and every part being numbered and accurately made to standard gauges. The workmanship and finish are also of a superior character; the entire machine being quite equal to a revolution, so to speak, in lawn-mowers.

Favourite size hand machine, for one man, 14 in., 5*l*. 10*s*.; for two men, 16 in., 6*l*. 10*s*.; 18 in., 7*l*. 10*s*.; 20 in., 8*l*.; 22 in., 8*l*. 10*s*.; 24 in., 9*l*. Favourite pony machine, 30 in., 17*l*. 10*s*.; horse machine, 36 in., 24*l*. 10*s*.

J. B. BROWN & Co.'s improved wire netting, galvanised after made, 1½ in. mesh, for small rabbits, light, 4¼*d*. per lineal yard, 24 in. high; strong, 6¼*d*.; 2-inch mesh for poultry, light, 3¾*d*. per yard; strong, 5¾*d*.

J. B. BROWN & Co.'s improved ornamental and portable Fencing. Detailed priced lists of this and all their other manufactures to be had on application at their stand in the Exhibition, or to their London address.

Les Nouvelles Faucheuses pour Pelouses, brevetées, de J. B. BROWN et C^{ie}., combinent tous les perfectionnements les plus récents apportés dans ces sortes de machines, ces faucheuses étant d'une construction simple, très-légères, fonctionnant sans bruit, étant faciles à faire agir, et tellement solides et durables, qu'elles sont littéralement indestructibles—tous caractères de la dernière importance dans les machines de cette classe; le fer malléable ayant été substitué, dans toutes les parties susceptibles de se briser, à la fonte ordinaire, qui a été totalement supprimée, et chaque pièce étant numérotée et fabriquée, avec soin sur mesures étalon. La main d'œuvre et le fini de ces machines sont également d'un caractère supérieur; en un mot, elles constituent dans leur ensemble une véritable révolution, pour ainsi dire, dans la construction des faucheuses pour pelouses.

Faucheuse à main, pour un homme, dimension favorite, 35·56 c., 187·50 fr.; do. pour deux hommes, 40·64 c., 162·50 fr.; 45·72 c.,

187·50 fr.; 50·80 c., 200 fr.; 55·88 c., 212·50 fr.; 60·96 c., 225 fr. Faucheuse favorite pour poney, 76·20 c., 437·50 fr.; do. pour cheval, 91·44 c., 612·50 fr.

Filets en fil métallique, perfectionnés, de J. B. BROWN et C^{ie}., galvanisés après fabrication, maille de 1·59 ces., pour petits lapins, légers, 0·45 ces. par yard—91·43 ces.—linéaire, 60·96 ces. de hauteur; forts, 66 ces.; à maille de 5·8 ces. pour volaille, légers, 0·40 ces.; forts, 61 ces.

Prix courants et listes détaillées de tous objets de clôture perfectionnés, d'ornement, et portatifs, fabriqués par J. B. BROWN et C^{ie}., sur demande faite à leur Exposition au Champ de Mars, ou à leur adresse à Londres.

J. B. BROWN & Co.'s neuer patentirter Ziergrasplatz-Mäher vereinigt in sich alle die neuesten Verbesserungen in Mähmaschinen für Ziergrasplätze, da er einfach in Bauart, sehr leicht, geräuschlos, wenn in Thätigkeit, sehr leicht zu arbeiten und so stark und dauerhaft ist, dass er wörtlich nicht zu zerbrechen ist, eine sehr wichtige Eigenschaft in Maschinen dieser Klasse; das gewöhnliche Gusseisen ist ganz und gar nicht angewandt und dafür Schmiedeeisen gebraucht in allen zerbrechlichen Theilen, und jeder Theil ist numerirt und genau nach Originalmassen gemacht. Die Arbeit und Vollendung sind ebenso vorzüglich, und die ganze Maschine ist, so zu sagen, einer Umwälzung in Grasplatz-Mähern zu vergleichen.

Handmaschine, von beliebter Grösse, für einen Mann, 14 Zoll, 36¾ Thlr.; für zwei Männer, 16 Zoll, 43½ Thlr.; 18 Zoll, 50 Thlr.; 20 Zoll, 53¾ Thlr.; 22 Zoll, 56¾ Thlr.; 24 Zoll, 60 Thlr. Beliebte Maschine für ein Pony, 30 Zoll, 116¾ Thlr.; Pferde-Maschine, 36 Zoll, 160¾ Thlr.

J. B. BROWN & Co.'s verbesserte Drahtnetze, verzinkt nach der Verfertigung, Masche 1½ Zoll, für kleine Kaninchen, leicht, 3 Sgr. 6 Pf. per Längenyard, 24 Zoll hoch; stark, 5 Sgr. 6 Pf.; Masche 2 Zoll, für Geflügel, leicht, 3 Sgr. 3 Pf. per Yard, stark, 4 Sgr. 9 Pf.

J. B. BROWN & Co.'s verbesserte und tragbare verzierte Drahtverzäunungen. Ausführliche Preis-Courante von diesem und allen andern ihrer Fabricate sind zu haben auf gefällige Anfrage an ihrem Stande in der Ausstellung oder zu ihrer Londoner Adresse.

CLASS LXXXIV.

SUTTON & SONS, *Seedsmen to the Queen, the Emperor of the French, &c. &c., Royal Berkshire Seed Establishment, Reading, England.*

Seed Growers and Merchants.

Enfin des spécimens des graminées agricoles et d'ornement, produites par SUTTON ET FILS, à Reading, Berks, Angleterre.

GROUP X.

CLASS LXXXIX.

SCIENCE AND ART DEPARTMENT, SOUTH KENSINGTON, LONDON.

COLLECTIONS OF THE MOST RECENT YEARLY REPORTS

PUBLISHED BY SOME OF THE CHARITABLE, BENEVOLENT, AND VOLUNTARY SOCIETIES AND INSTITUTIONS OF GREAT BRITAIN AND IRELAND, MADE AT THE REQUEST OF THE IMPERIAL COMMISSION.—(See also Group II. Class VI.)

This collection is as complete as it was possible to make it. It is hoped that it may possess a value, as shewing the means by which, in a country where local self-government is one of the most cherished privileges of the nation, voluntary associations supplement the municipal administration.

It has been thought advisable to classify these reports in two groups—

1. Those furnished by the metropolitan institutions, of which the collection is less incomplete than that of the provincial societies.

The whole estimated income of the various charitable and benevolent societies of London was, for 1865, over £2,400,000.

2. Such reports of provincial institutions as could be obtained in the very limited time and with the resources that could be devoted to their collection.

Besides the reports found in these two Groups, there are two other classes which it does not seem quite convenient to include in either—the reports of the volunteer corps of the United Kingdom; and those of the mechanics' institutes and other literary and scientific associations similarly constituted, and having analogous objects.

The Reports in the first Group are divided into the following classes:—

- 1 Hospitals and infirmaries for medical treatment
- 2 Dispensaries. Under this head are included lying-in charities where the women are attended at their own homes
- 3 Asylums for lunatics and idiots
- 4 Asylums and charitable institutions for the blind, deaf and dumb
- 5 Asylums for the indigent
- 6 Refuges, reformatories, ragged schools, and orphanages for men or boys. Refuges for both sexes are included under this head
- 7 Refuges, reformatories, penitentiaries, and Orphanages for women and girls
- Provident societies

- 9 Religious societies and missions
- 10 Educational charities
- 11 Miscellaneous charities

The second Group is divided into the same classes, with the addition of one for parochial and municipal reports.

The following is a list of the Reports:—

Note (p) signifies that the report will be found in the portfolio.

* Some of these Reports have been sent in MS. but it was thought right not to exclude them.

FIRST GROUP.

1. Hospitals and Infirmaries for Medical Treatment.

Brompton Hospital for Consumption
 Charing Cross Hospital
 Chelsea Home
 City of London Hospital for Diseases of the Throat
 City of London Lying-in Hospital
 " " Orthopædic Hospital

BREVET DE FOURNISSEURS DE
L'EMPEREUR.

BY APPOINTMENT TO
THE QUEEN.

JACKSON & GRAHAM,

29, 33, 34, 35, 37, & 38 OXFORD STREET,

LONDON, W.

DECORATORS, UPHOLSTERERS,

Cabinet Makers & Carpet Manufacturers

Prize Medal, Great Exhibition
of 1851.

Gold Medal of Honour, Exposition Universelle,
Paris, 1855,
for 'Improvements in English Furniture.'

Medal for 'Great Excellence
in Design and Workmanship,'
International Exhibition, 1862.

The Spacious Show Rooms and Galleries, covering an area of 40,000 feet, are filled with an unrivalled Stock, the prices of which are all marked in plain figures at the most moderate rate for ready money.

The extensive Manufactory adjoining, with Machinery worked by Steam Power, is fitted with all means and appliances to ensure superiority and economise cost.

Each of the undermentioned Departments will be found as complete as if it formed a separate business, viz. :—

Paper Hangings, Painting, and Interior Decorations of all kinds.

Carpets of superior manufacture of every description.

Cabinet Furniture, Chairs, Sofas, Ottomans, &c.

Silk and Silk and Wool Damasks, Aubusson and Venetian Tapestries, Chintzes, Utrecht Velvets, Arras, Reps, Merino Damasks, Cloths, &c. &c.

Bedsteads of Iron, Brass, and various Woods, and superior Bedding and Mattresses of all kinds. (The new and extensive premises (No. 29), consisting of four floors, measuring 20,000 feet, are devoted to this department.)

Plate Glass, Carving and Gilding.

Gallery of Bronzes d'Art (sole dépôt for the productions of F. Barbedienne & Co., Paris), Clocks, Candelabra, Vases, and Ornamental Porcelain.

The public are thus enabled to select their Paper Hangings or Decorations, Carpets, Curtains, and Furniture all in harmony with each other at one establishment.

JACKSON & GRAHAM invite public attention to VERRICHIO'S PATENT SIDE-SPRING MATTRESSES (of which they are the Sole Manufacturers in Great Britain), as the cleanest, healthiest, cheapest, and best ever invented. A large number are already in use, and give the greatest satisfaction (*see* APPENDIX, page 96.)

PATENT.

1s. per Box; by Post, 1s. 2d.

IMPORTANT TO WRITERS, CLERGYMEN, BUSINESS MEN, WRITERS
FOR THE PRESS, TEACHERS, &c. &c.

The manufacturers of the **WAVERLEY PENS** beg to draw the attention of the public to the superiority of the Waverley Pen for all purposes of quick writing. The use of the Waverley Pen does not fatigue the hand, though used for many hours at a time. It is the only steel pen that can be used with freedom on rough paper. This pen has had the largest sale of any pen ever made. Though made only a few months, many millions of them have been sold, and hundreds of satisfactory notices have appeared in the public press. The Waverley Pen is patent, and the public are cautioned against buying any without trade mark on box, 'The Sword and the Pen.' Traders are cautioned against buying or selling any infringement of this patent, as they are liable in damages for so doing.

'This pen is the best pen we have ever tried. By an arrangement of the point, it almost makes the hand run after it, so facile and so pleasant is it.'—**GREENOCK HERALD.**

'PENS.—Bad pens are provocative of—what shall I say? Ill-humour; yes, that is the mildest word I can find to express my meaning. Those who, like myself, scribble for the press, know the value of a good pen; but how to find one has always to me been a more difficult problem than that "asses' bridge" which puzzled my young brain. I must say, however, that the "Q.E.D." of the steel pen problem has at last been made clear. An article has been produced by **MACNIVEN & CAMERON** which bears the name of the "**WAVERLEY PEN**," that must ultimately supersede all others. *It possesses all the flexibility and smoothness of the quill, and is the best steel pen I have ever written with.* Those who try the "Waverley" once will, I am convinced, use it ever afterwards. To the great mass of suffering humanity called literary, that eat paper and drink ink, I cannot confer a greater benefit than by recommending to their notice the best steel pen extant for rapid and easy writing.'

NEWCASTLE CHRONICLE.

To be had, Wholesale and for Export, from **MACNIVEN & CAMERON**, 97 Newgate Street, London, and 23 Blair Street, Edinburgh. (Established 1770.)

Sold by all Booksellers, Stationers, and Newsvendors in town and country, 1s. per Box;
by Post, 1s. 2d.

CHURCH FOR ENGLISH & AMERICAN VISITORS.

DIVINE SERVICE IS HELD DAILY,

AND AT CONVENIENT HOURS ON SUNDAYS,

IN THE CHURCH ERECTED ON THE SITE,

Adjoining the Paris Universal Exhibition Buildings,

GRANTED FOR THIS PURPOSE BY THE PRÉFECT DE LA SEINE.

THE HOLY COMMUNION IS CELEBRATED EVERY SUNDAY.

KEATING'S COUGH LOZENGES,

A SAFE AND CERTAIN REMEDY FOR
COUGHS, COLDS, HOARSENESS, AND OTHER AFFECTIONS OF THE
THROAT AND CHEST.

In INCIPIENT CONSUMPTION, ASTHMA, and WINTER COUGH they are unfailing. Being free from every hurtful ingredient, they may be taken *by the most delicate female or the youngest child*; while the PUBLIC SPEAKER and PROFESSIONAL SINGER will find them invaluable in allaying the hoarseness and irritation incidental to vocal exertion, and also a powerful auxiliary in the production of MELODIOUS ENUNCIATION.

CURE OF ASTHMA OF SEVERAL YEARS' STANDING.

CAINSCROSS, NEAR STROUD, GLOUCESTERSHIRE.

SIR,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about two years ago to try a box of your valuable LOZENGES, and found such relief from them that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends.

If you consider the above Testimonial of any advantage, you are quite at liberty to make what use of it you please.

THOMAS KEATING, Esq.

I am, Sir, your most obliged servant,
W. J. TRIGG.

Prepared and Sold in Boxes, 1s. 1½d.; and Tins, 2s. 9d., 4s. 6d., and 10s. 6d. each.

THOMAS KEATING, CHEMIST, &c.,

79 ST. PAUL'S CHURCHYARD, LONDON.

RETAIL BY ALL DRUGGISTS AND PATENT MEDICINE VENDORS IN THE WORLD.

KEATING'S PERSIAN INSECT DESTROYING POWDER.

This Powder is **QUITE HARMLESS TO ANIMALS**, but unrivalled in destroying Fleas, Bugs, Emmets, Flies, Cockroaches, Beetles, Gnats, Mosquitoes, Moths in Furs, and every other species of Insect in all stages of metamorphosis.

A small quantity of it placed in the crevices of a bedstead will destroy Bugs, and as long as it remains they will not reappear.

It is strongly recommended to FAMILIES, PROPRIETORS OF HOTELS, BOARDING HOUSES, &c., as being clean in its application, and well adapted to exterminate those pests in sleeping apartments so difficult to guard against.

It is indispensable to Travellers by Rail or Steamboat, and Visitors to the Seaside, for protecting Bedding and Cabins from FLEAS, BUGS, COCKROACHES, MOTHS, and MOSQUITOES.

Rubbed into the Skins of DOGS, CATS, or other DOMESTIC ANIMALS, it completely annihilates FLEAS, TICKS, and ALL OTHER VERMIN. It is extremely useful for sprinkling about the Nests of POULTRY, in PIGEON HOUSES, GREENHOUSES, &c. It is perfectly harmless in its nature, and may be applied without any apprehension, as it has no qualities deleterious to animals.

BLACK BEETLES.—Dusted about the haunts of these loathsome Insects, it so stupifies them that they may be easily swept up and destroyed.

Placed in Drawers, Chests, or Wardrobes, it protects Furs, Woollen Clothes, &c., from Moth.

Imported and Sold in Packets, 1s., 2s. 6d., and 4s. 6d. each; or 1s. Packets (free by post) for 14 Postage Stamps, and 2s. 6d. on receipt of 36.

Also in Bottles with Bellows, 1s. 6d. and 3s. each, by

THOMAS KEATING, CHEMIST,

79 ST. PAUL'S CHURCHYARD, LONDON, E.C.
